Inside Yorkshire's borders, however, gloom prevailed, and Saturday's dawn brought rain. Officials and competitors sadly peered through the mists and driving downpour and watched the surface deteriorate from a fairly ridable one to a slippery quagmire of yellow clay. One or two essayed the ascent, R. T. Cawthorne, for instance, on his 3½ h.p. Norton side-car, and Fraser Nash on the G.N. struggled up despite wheel-slip at a speed which scarcely ever exceeded 25 m.p.h. Many spectators found it impossible to climb the hill at all, and ultimately the committee reluctantly announced that the event would be postponed until next Saturday. Nothing else was to be done, of course, but the assembled motor cyclists having nothing better to do and perhaps feeling "fed up and far from home," whiled away the afternoon in desultory attacks on the gradient, in gossip, and in tea at Thirsk, where sorrow might be drowned.

Such a disappointment is, indeed, hard lines on the organising club (the York and District M.C.) and on the spectators, many having journeyed by chars-a-bancs from surrounding places. Many of the competitors, of course, may have other arrangements which will prevent them competing on the 29th, but to those who are able to be there, better luck next time!

Strange to say, those who travelled southwards on the following day found that lovely weather had been enjoyed intermittently during the week-end south of Yorkshire—such is fate.

# SPORTING NORTH COUNTRY EVENT.

## Few Finish with Clean Sheets in the Travers Trophy Trial of the Newcastle and District M.C.

INTERMITTENT rain during the whole day somewhat increased the difficulties of an already sporting course in last Saturday's Open Trial of the North-Eastern Centre A.C.U. The organising club was the Newcastle and District M.C., and the chief award, as last year, was the Travers Challenge Trophy (value 200 guineas), together with a special prize (or cheque), value £50. There were several further awards and the entry list was very representative, well-known riders attending from all over the country.

Each competitor was credited with 100 marks at the start and was allowed a five-minute early limit without penalisation. Failure on an observed hill meant a loss of five marks, and to decide the winner of the Trophy, should several finish with clean sheets, a formula climb was held *en route* on Killhope Hill. Fastest time in this climb, irrespective of class, gained the Alan Robson Shield for one year.

From the start at the Grand Hotel, Newcastle, the route led through Shotley, Castleside, Blackpool Hill, to Stanhope, up Peat Hill, which has a bad left-hand bend, and along a very difficult section to Holloway Hill, through Middleton-in-Teesdale to Killhope, and then on to lunch at Allandale, a distance of 83 miles.

Several competitors got into trouble early. H. R. Harveyson (3½ Triumph) punctured twelve miles from the start and was eight minutes late at the next check in consequence, as was P. Hart (3½ Sunbeam). However, he carried on without worrying much about keeping to schedule time, and indeed stopped on several of the hills to watch the other competitors' performances. Last year's Trophy winner, George Denby (2¼ Velocette), was also put out of the running at an early stage, owing to his magneto timing slipping.

Killhope, the timed hill climb, a main road test, was in fair condition. A car by the roadside was mistaken for the official check by a number of the competitors, who pulled up there by mistake.

Hugh Mason, on a very speedy sporting N.U.T., made fastest time, another N.U.T. was second, and Harveyson, on the o.h.v. Triumph, was third. Other excellent ascents were made by G. Grinton (1922 7-9 Harley-Davidson sc.), W. R. Haggas (3½ Triumph), Bert Kershaw (2¼

**Sporting North Country Event.**—New Imperial), and G. M. Townshend (4¾ P. and M. sc.).

After climbing the lower reaches at a good pace, Kaye Don (5½ Norton) came to a stop, owing to the needle-valve of his carburetter breaking.

There was a surprising number of stoppages in the morning's run which, although not difficult, included a considerable amount of grass-grown moorland tracks. Perhaps W. R. Haggas (3½ Triumph) shone more than any other on these sections, but Harveyson (Triumph) and Kershaw (New Imperial) were also very sure of themselves.

Stanley Bell (2¾ Beardmore, Barr & Stroud) retired at the luncheon check with a broken throttle wire; R. Pace (4 Triumph) was pursued by belt trouble, both in the morning and the afternoon, and J. Joynson (2¾ Invicta) broke a valve.

In the afternoon the reverse morning's course was followed in two separate portions, but the total distance was shorter by fifteen miles.

E. A. Barnett (2¾ Francis-Barnett) broke a chain, but by hard riding managed to make up time.

A big percentage of the starters finished, to the delight of a huge crowd, but it is generally agreed that very few retained absolutely clean sheets.

# CLUB NEWS (continued from p. 540)

### Worcester and District M.C.C. and Worcestershire M.C.

J. H. Kettle, an amateur driver, on a New Hudson three-wheeler, only delivered a week previously, made an outstanding performance in the recent joint trial of these clubs. Results:

Kay Cup:—Bert Kershaw (2¼ New Imperial).
Special Prize:—T. H. Leeke (10 Morgan).
Silver Medals: W. J. Stretton-Ward (3½ Triumph), L. W. Lewis (4¼ Beardmore), C. F. Townley (3½ ——).

### Cork and District M.C.C.

To qualify for first class awards in the Easter Monday trial, a competitor had to to be on time at all open checks. (2m. allowed), and at all secret checks (5m.); to climb both test hills, and to show a figure of merit in the flexibility test ranging from 4 for solos under 300 c.c. and sidecars under 600 c.c. to 7 for solo machines from 750 to 1,000 c.c. on the formula: slow time ÷ fast time. The total distance was about 150 miles. Six competitors made clean ascents of "Priest's Leap." Results:

First-class Awards (no marks lost).
Jack Mulligan (3½ Triumph).
R. S. Russell (3¾ Scott).
Don O'Sullivan (4 Triumph).
J. Gibbings (2¾ A.J.S.).
J. P. Frost (8 Blackburne).

Second Class Award.
J. O'Sullivan (2¾ A.J.S.) (1 mark lost).

The Challenge Cup presented by the South of Ireland Motor Co. was awarded to Jack Mulligan for the best performance of the day.

## Week-End Club Events.

*April 27th.—Gloucester M.C. and L.C.C.—Reliability Trials.*
*April 27th.—North Wales M.C.C.—Petrol Consumption Test.*
*April 29th.—Sheffield M.C.C.—Picnic at Strines Inn.*
*April 29th.—Cardiff M.C.C.—Hill Climb.*
*April 29th.—Eastern Centre A.C.U.—Half-day Reliability Trial.*
*April 29th.—Coventry Triangle M.C.—Hill Climb.*
*April 30th.—York and District M.C.—Club Run.*
*April 30th.—Manchester M.C.—Speed Trial.*
*April 30th.—Wolverhampton M.C.C.—Trial.*
*April 30th.—Darlington and District M.C.—Social Run.*
*April 30th.—Brighton and Hove M.C.C.—Surprise Run.*
*April 30th.—Rochester, Chatham and District M.C. and L.C.C.—Run to Penshurst.*
*April 30th.—Northern Centre A.C.U.—Rally.*
*April 30th.—Halifax and District M.C. and L.C.C.—Reliability Trial.*
*April 30th.—Kelso and District M.C.—Paper Chase.*
*April 30th.—Featherstone and District.—Run to Shipley Glen.*
*April 30th.—Kidderminster M.C.C.—Social Run.*
*April 30th.—Coventry Triangle M.C.—Run to Yarningdale Common.*
*April 30th.—Sheffield M.C.C. and S.C.C.—Trophy Trial.*
*April 30th.—Taunton and District M.C. and L.C.C.—Run to Sidmouth.*
*May 1st.—Oxford M.C.—May Morning Social Run.*

At the start of the 500 c.c. class in last Saturday's Edinburgh and District M.C. speed contest held at Ravelaw Hill, Balerno. J. R. Alexander (494 Douglas) and Graham Black crossing the tape.

### Essex County and Southend-on-Sea A.C.

On account of the organisation required to ensure a successful event, the club has been obliged to postpone its big hill climb from May 1st to May 27th.

### Cardiff M.C.

The first reliability trial of 1922 was held on Wednesday of last week over a 65-mile course. Seventeen competitors started, and twelve completed the course. R. Morel (8 Rex sc.) won premier place with a loss of only three marks.

### Rochester, Chatham and District M.C. and L.C.C.

Much of the credit for the success of the Easter hill-climb at Vigo Hill, described last week, is due to this club, which carried out the greater part of the organisation, the other Kent clubs attending mainly as competitors.

### Leinster M.C.C.

Results have now been announced of the two days' Easter trial:

Carver-Draper Cup (for medium solos and sidecars over 600 c.c.):—H. E. Bell (3½ James).

Lepler Cup (for lightweights solos and under 600 c.c. sidecars):—T. Henry (2¼ Velocette).

First Class awards:—H. E. Bell (3½ James), R. Murphy (4 Triumph), H. Adair (4 B.S.A.), J. A. Carville (4 B.S.A.), J. G. Burney (8 Enfield sc.), S. J. Redmond (7-9 Indian sc.), F. Holmes (8 Matchless sc.), T. E. Greene (3½ Douglas), G. A. Daly (4 Triumph), R. M. Murphy (4 Triumph).

Second Class Awards (Silver Medals):—James Adair (4 Triumph), G. Thomson (3½ N.U.T.), T. Henry (2¼ Velocette), J. A. Adair (4 B.S.A.), J. Brown (3½ Douglas), P. A. Bell (7 James).

Special Prize for best performance of a novice was awarded to H. E. Bell (3½ James).

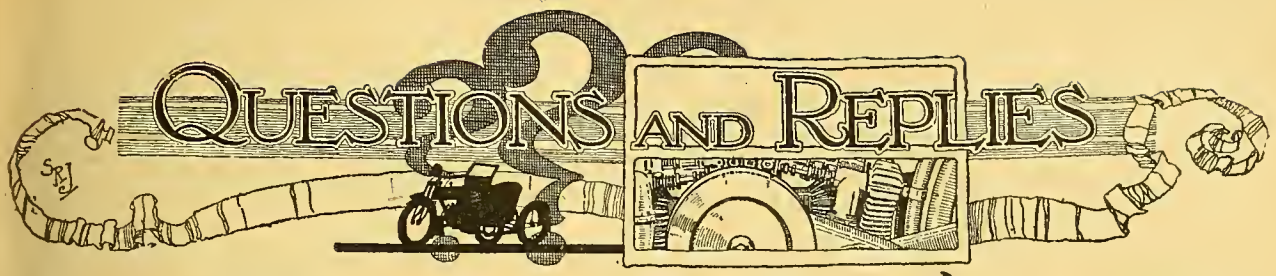
Special prize for best performance of machines up to 250 c.c. was awarded to T. Henry (2¼ Velocette).

### Nottingham and District M.C. and L.C.C.

Night runs are becoming popular with the East Midland centre A.C.U. clubs. In the last of them, organised by the Nottingham Club, the 141-mile route was *vid* Mansfield, Newark, Lincoln, Retford, Worksop, Chesterfield, Matlock, and Derby, finishing at Wollaton Park gates. A team event was incorporated, and gold medals offered by the North Derbyshire Club for the best performance of a team of three riders, from any club of the centre, but several riders took a wrong road outside Lincoln, and no complete team finished. Only one failure was reported in the observed section at Amber Hill. Awards:

350 c.c.: S. S. Debenham (2¾ Campion); 550 c.c. solo: W. N. Haslam (3½ Norton); 1,100 c.c. sidecar: I. Cohen (10 Campion sc.), only single cylinder sidecar machine to finish, L. S. Hooley (4¼ Beardmore-Precision sc.).

Gold medal certificates:—D. O. M. Macfarlane (Velocette), D. H. Jones (Beardmore), A. J. Raynor (Rndge-Multi), F. E. Nash (Scott), C. Coates (Douglas), and W. Waddington (Ivy).



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### TWISTED FRAME.

Owing to the very bad roads I have been over recently, the head of my Scott machine has been pulled over by the sidecar ¼in. out of the vertical. I have been assured that by placing a steel bar through the head it is possible to lever it back the necessary ¼in. (each end of the head) without heat. Is this not rather risky, as I feel the metal may possibly have a flaw in it after such treatment?—OLD MAN SAFETY.

The treatment you describe is distinctly risky if carried out without heating the frame, as on account of the spring of the metal you would have to pull it much more than you propose in order to set it back ¼in. The best plan will be to return the frame to the makers so that it can be properly trued on a jig.

### SPRING FORK AND TYRE WEAR ON BIG SINGLE.

I have a 1921 B.S.A., 4¼ h.p., and sidecar. (1.) The front fork springing seems very harsh; is this usual on this type of machine? (2.) Should I improve matters to a great amount if I fitted Terry spring links? (3.) After 1,000 miles running, the back tyre is worn quite flat, not down to canvas, but all pattern gone; is this caused by the all-chain drive?—R.W.F.

(1.) We do not quite understand what you mean by the front fork springing being harsh, as you do not make it clear whether the fork is too lively or whether it does not work at all; you can damp its action (if the former) by tightening the shackle bolts, while if it is too stiff you can free it by slackening them. We have found this spring fork to be efficient and satisfactory, although it tends to bounce somewhat if the shackles are allowed to get slack. (2.) Although we have not used the spring links on these particular forks, we should imagine that they are an improvement, as they make provision for horizontal shocks. (3.) With the same machine 2,500 miles (with sidecar) should be obtained from the back tyre before it is worn quite down to the canvas. The clutch spring tension is best eased off somewhat to render the drive less harsh, and the engine must never be allowed to thump on top gear, middle gear being used whenever necessary, and slight pressure being applied to the clutch lever when the engine is picking up on top gear.

### A CARBURETTER FAULT.

My Rudge machine starts off easily, but on steadily opening out above 30 m.p.h. chokes and backfires and stops unless I shut off again pretty quickly. I have just had the engine down (rebushed, new piston rings, etc.), and the magneto timing is correct; do you think wrong valve timing would do this? I have a large, long, trumpet-ended air intake fitted to the carburetter and a rather large jet. It chokes if I open both gas and air steadily, or if I open gas only. Could you kindly advise me on this, please? The pipe from the carburetter has an ugly bend in it; would it improve the running if I substituted a straight pipe?—R.V.

The symptoms are those of insufficient petrol supply beyond a certain throttle opening, and if you had not stated that the jet was a fairly large one we should have judged it to be on the small side. Test for partial obstruction in the flow. On the other hand, the trouble might be due to incorrect valve timing, and this should be checked carefully by the makers' instructions. A straight inlet pipe is generally desirable, but it is unlikely that the bend you describe is the cause of the trouble. As a guide to the correctness of the jet size, notice whether black smoke is given off from the exhaust; this is a symptom of too rich a mixture. Inability to open the air lever fully at moderate speeds indicates weak mixture.

## Important Dates.

**Sat., April 29th—S. Midland Centre A.C.U. Open Hill-climb.**
**Sun., April 30th, to Sun., May 7th—Paris-Pyrenees Trial.**
**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 6th—B.M.C.R.C. Members' Meeting at Brooklands.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs., June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 Mile Sidecar Race, Brooklands.**
**Fri., June 23rd, and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**
**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Wed., July 12th—French Grand Prix.**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**

### INJURY TO A DOG.

Recently while riding up a slight hill I ran into a large shepherd dog. I did not run over it, but struck it hard in the centre of the body, and from what I hear the dog has died and the farmer has told me he is going to claim compensation for it. I did not fall off nor was any perceptible damage done to the machine; there were no people about at the time, and the dog was standing in the centre of the road and ran to the side at the moment I should have passed; the farmer now states I was going 30 miles per hour.—S.J.M.

The liability depends entirely on how you were riding. If you were going at a moderate speed and, by exercising proper care, could not avoid doing injury to the dog, then you are not liable. Of course the dog had a perfect right to be in the road, and it was your duty not to ride in such a manner as to cause it injury, but if, as suggested, the dog was standing in the centre of the road and suddenly ran in front of your machine just as you were passing there is no liability, if, as before stated, you were riding carefully.

### IMPROVING A TWO-STROKE ENGINE.

Being desirous of tuning up the 2½ h.p. Union 2-stroke engine on my motor cycle, I would be grateful for assistance. I understand that by filing all the roughness, corners, and sharp edges of the exhaust and inlet ports, more power

can be obtained. (1.) How much is it advisable to file off without weakening the cylinder? (2.) Should the ports be filed on all four sides? (3.) Will this seriously affect the timing of the ports? —D.H.S.

(1, 2, and 3.) It is quite likely that an improvement would be effected by filing the ports as you suggest, but at the commencement, at any rate, we think it would be best to do no more than smooth them and then test the effect on the running of the engine. You certainly should not take much off the top and bottom of the port without careful thought, as by so doing you will alter the timing of the engine.

### FITTING A SPEEDOMETER LIGHT.

[?] I have a Lucas Magdyno fitted to a Matchless outfit, which has the usual three lamps connected up. I now wish to fit a speedometer lamp, the current to be taken from the generating outfit; will you furnish me with details as to where to make my connections?—F.A.C.

There is a spare terminal in the switch box of the Magdyno set to which extra fittings such as a horn or inspection lamp may be connected. Write to the makers for their instruction booklet, which contains diagrams of the wiring and interior of the switch box.

### EFFECT OF EXCESSIVE IGNITION ADVANCE.

[?] I have a 3½ h.p. J.A.P. engine, and last week, after setting the magneto (Bosch) correctly, as I thought, I tried to start up, and the cylinder broke off where it is bolted to the crank case. What was the cause?—H.H.

You timed the ignition with too much advance, thus causing the spark to occur so far before the piston reached the top of the stroke that the full force of the explosion was developed when the piston was actually on top dead centre, with the result that the cylinder broke away from the crank case bolts. The spark should be timed to take place when the piston is on top dead centre with the ignition control two-thirds retarded, and in no case should it be much advanced beyond this setting.

### FOUR-CYLINDER TWO-STROKES.

[?] As I am about to design a four-cylinder w.c. two-stroke engine of about 7-9 h.p., I should like to know your opinion on such an engine for a light car, etc., before I go very far into the matter. (1.) Do you consider 60 mm. ×70 mm. bore and stroke will give 7-9 h.p.? (2.) What is the usual compression space for a two-stroke engine in relation to bore and stroke?—F.G.S.

(1.) The dimensions you mention will give a total capacity of approximately 800 c.c., and this might be nominally rated at 7 to 8 h.p. (2.) This question cannot be answered; the usual compression ratio is between 4 and 5 to 1. There does not appear to be any object in making a four-cylinder two-stroke unless the cranks are set at 90°; if the cranks are set at 180° the torque is no better than that of a two-cylinder two-stroke.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.*

"A.L.H." (Birmingham).—2½ h.p. Calthorpe two-stroke, with clutch and kick-starter.

"N.E.H." (London, W.2).—3½ h.p. Rudge-Multi and 3½ h.p. Duzmo.

"A.B.C." (Ashington).—1922 A.B.C. solo.

"J.M." (Newton Stewart).—A.B.C. under Colonial conditions; can W.S.R. be fitted; mechanical defects; also Palmer rear suspension on 2¾ h.p. Douglas.

"F.J.G." (London, W.).—Scott with sidecar; reliability, accessibility, m.p.g., compression losses at crankshaft glands.

"H.K." (London, N.W.1).—Ner-a-car: with additional passenger occasionally.

"C.T." (Norwich).—2¾ h.p. Excelsior-Blackburne.

"J.B." (Liverpool).—2½ h.p. Cleveland: improving starting and consumption.

"A.L." (London, S.E.17).—5-6 h.p. F.N.: particularly cost of upkeep.

"A.F.M." (Boat of Garten).—Volex dry battery outfit on sidecar machine.

## SPARKLETS.

### Coulson Motor Cycle Spares.

As the present makers of Coulson motor cycles, A. W. Wall, Ltd., have organised a spares and repairs department, and replacements are now promptly available from the works at Tyseley, Birmingham.

### Found on the Road.

Mr. P. T. Kimmins of Lynton, Devon, reports finding a starting-handle on Beggar's Roost after the passage of the Land's End competitors on Easter Saturday.

On Good Friday Mr. J. B. Cox, 27, Flanders Road, Chiswick, London, W.4, found an inner tube between Dorking and Horsham.

A new inner tube was seen to drop from a solo rider's machine at Hyde Park Corner on April 13th by Mr. P. H. Hardwick. Particulars should be forwarded to the Editor.

### Plugs in the Tour de France.

In the 500 c.c. class in the 2,300-mile Tour de France, Naas, who gained premier position, used K.L.G. plugs in his A.B.C. machine.

### Spares Service.

As an example of the value which the place upon the spares and replacement side of their agency business, Maudes Motor Mart, of London, Exeter, and Walsall, mention in a recent letter that 30% of their stock value is apportioned to these headings.

### Teams in the International Six Days.

Owing to a printers' error in the original regulations it was stated in our issue of April 6th that a national team must consist of three solo machines and one sidecar outfit or cycle car. The team should consist of two solo machines and one sidecar or cycle car.

### Touring Handbook of the A.C.U.

A new edition of the Auto Cycle Union touring guide is a larger publication than the 1921 issue. It contains information on legislative matters affecting motor cyclists, the new camping facilities offered to members, a list of ferries in the United Kingdom, railway rates, and a list of hotels and repairers.

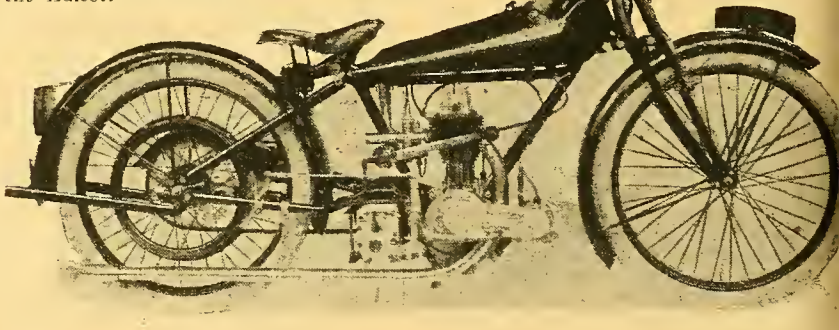
### More Echoes from the Arctic Trial.

Credit for taking round the small-engined sidecar outfit to gain an award in the Western Centre's abandoned trial of April 1st must be given to L. Clubb (2½ Allon sc.). Two solo Allons also secured certificates. The award of S. G. (2¼ Sun Vitesse) has been confirmed, and A. Williams (8.7 G.N.) has received an award.

### Catalogues Received.

The Mohawk Cycle Co., Ltd., 2, 4 & Alexandra Road, Hornsey, N.8. A catalogue dealing with the various models of Mohawk motor cycles, also sidecars and sidecarriers.

The D. F. & M. Engineering Co., Ltd., Diamond Works, Wolverhampton. Two catalogues, one describing the Jap engined Diamond models, and the other the B.S. & Stroud engined models.



A modified sports model 2¾ h.p. Coventry Eagle. All but essentials have been removed in order to reduce the price to £67. The prices of other models have also been reduced, but they do not replace the standard types with full specification.

# POWER AND—COMFORT

ots of both—go to make the "big single" spring-ame Beardmore-Precision a challenge to the rclecar.

he Design is simple, sound and strong through-it. It is a motor bicycle which anyone can drive ith ease and ***enjoyment*** because of the ample ower and supreme comfort.

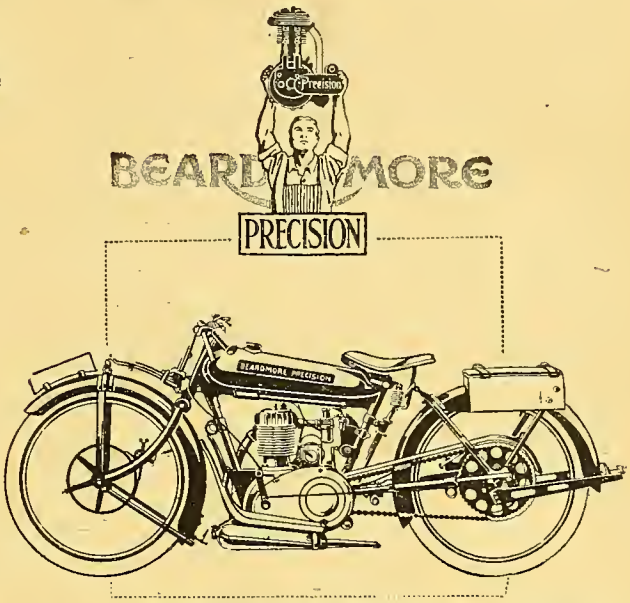
**EXCLUSIVE FEATURES OF THE 4¼ h.p. BEARDMORE-PRECISION.**

Full Cantilever Spring Frame and 700×80 mm. (26"×3") light car tyres. 598 c.c. 4¼ h.p. Precision single-cylinder four-stroke engine, *with detachable head.*
Automatic and Mechanical Lubrication.
Sturmey-Archer 3-speed gear, clutch and kick-starter, *built-in to engine unit.*
All-steel frame of battleship strength, embodying pressed steel petrol tank (holding 2 gallons), large mudguards and tool-case *as parts of the frame.*
Band brakes to *both* wheels.

**OTHER POINTS.**

All-chain drive with shock-absorbing hub. Sensible leg-shields. All-black finish. **Price £105**

**Sports Touring & Two-Seater Sidecars at £25, £30 and £35.**



## F. E. BAKER, LTD.,

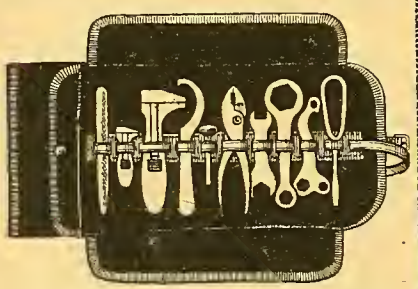
# "KING DICK"-good tools



***"King Dick" TOOL KITS*** consist of ten "King Dick" tools in high grade canvas roll with adjusting strap and pocket. The tools are the best of their kind—and all you really need.

***"King Dick" BELT PUNCH***

Made from steel forgings accurately machined and well finished. Will pierce clean holes through the toughest belt without clogging. Made in four sizes, for ¾", ⅞", 1" and 1⅛" belts.

UTTER dependability, long life and exceptional accuracy are qualities of every tool that bears the "King Dick" mark. Behind that mark stands a reputation for honest value and fair trading for over fifty years.

Our standards remain as high as ever. A "King Dick" tool is a tool you can trust—always.

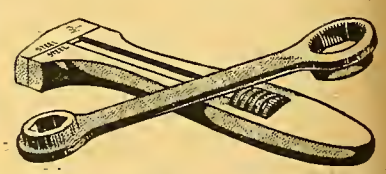
We illustrate here a few of our products, let us send you our complete catalogue.

*See the* *Trade Mark*

**ABINGDON WORKS LTD.,**
**Tyseley, Birmingham.**
**London Showrooms: 12, Mortimer St., W.1.**

***"King Dick" SPANNER SETS***

Handy, compact, to hold our 3", 4", 6" and 9" spanners. Also for 3", 4" and 6" sizes only. Wallets are of finest leather, strongly sewn and well finished.



***"King Dick" SPANNERS are guaranteed for ever***

British made from solid steel drop forgings, and capable of infinite adjustment. Always grip and never hurr the nuts. Made in four sizes—3 in. 4 in., 6 in., and 9 in.

*Feb.* 25, 1922.

Messrs. The South-Western Appliance Co., S.W. 6.

Dear Sirs,—The Delholme Motor House arrived safely on Monday last, and I have erected it to-day. I am very satisfied with it. The workmanship and materials are excellent. I thank you for dispatching so promptly; too promptly, in fact, as I had allowed a week for possible delays on rail. Notwithstanding the fact that it has been lying out in the heavy rains for 5 days, I had no difficulty in erecting it, the timber having apparently not swollen. Many thanks.

Yours faithfully, W. R. WILLIAMS.

St. James's Palace, S.W. 1.
*March* 28.

Dear Sirs,—Lady Helena Gleichen will be glad to receive the 16×15 Motor Car House as soon as possible.

11, Elm Terrace, Cockton Hill, Bishop Auckland.
*March* 25, 1922.

Dear Sirs,—I beg to acknowledge receipt of complete shed, which, since erected, has been admired by many friends.

Thanking you for your prompt attention,
Yours faithfully, Mr. T. W. LUMLEY.

An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

Insurance Policies

IMPORTANT AGENCY EXTENSION

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

## IGNITION, LIGHTING, ETC.

MAGNETO and Engineering Co. for magnetos, spares and repairs.

BOSCH Enclosed Waterproof Type D.A.L. Magnetos, Government surplus, ready to fit on Indian, Harley, J.A.P., or any big single or twin, gives powerful spark at all engine speeds, makes your engine a real live engine, gives you easy starting, smooth and rapid acceleration, high speed, and low fuel and oil consumption with increased power; price only £5 each, postage 1/6 extra; a 12 months' written guarantee sent out with each magneto. We give you satisfaction or refund cash.

PLEASE note, the above type magnetos were originally manufactured for 200h.p. aircraft engines; therefore we have every confidence in claiming them to be the magneto you require for your big machine. Fit one to-day, and see life with a live machine.

HARLEY-DAVIDSON owner writes:—"Magneto to hand; many thanks for prompt dispatch; satisfactory in every way; will recommend to my friends."

REMEMBER your magneto is sent on 14 days' approval against cash per return on receipt of your order; there is no obligation to keep it until you have used it for 14 days on your machine and are satisfied; let us send you one now.

MAGNETO and Engineering Co., 28, Bateman's Row, E.C.2. 'Phone: London Wall 4570. (One minute from Brown Bros.) [3208

## C.C. or H.P.?

DISCUSSION in motor cycle circles is once again centred upon the subject of misleading horse-power ratings. And again the suggestion that 100 c.c. should be regarded as the standard horse-power unit for normal purposes has been advanced. The proposal is a practical one and can be put into effect without trouble by anyone acquainted with the cubical capacity of the cylinder simply by placing a decimal point in front of the last figure but two of the capacity figure. Thus a 249 c.c. engine would be rated at 2·49 h.p., and a 499 c.c. engine at 4·99 h.p. That the suggestion is not a new one does not detract from its value as a ready means of comparison, but we may remind readers that it emanated from the staff of *The Motor Cycle* as long ago as 1912. In our issue of January 18th in that year we published an article on the subject, in which it was contended that

> "every maker can and does make an engine which in the usual motor cycle sizes, is capable of giving 1 h.p. for every 100 c.c. capacity, and that in ordinary touring trim."

Since 1912 we have from time to time revived the subject, urging the adoption of the 100 c.c. unit, but events have moved forward a big stage in ten years, and more anomalies than ever exist to create confusion among the buying public. Generally speaking, the standard 499 c.c. machine is rated at 3½ h.p., but some engines of smaller capacity than 499 c.c. are actually rated at 4 h.p. And so on, up and down the scale, until one realises that horse-power ratings convey little or nothing to the buyer.

For some time past, recognising the misleading nature of horse-power ratings, *The Motor Cycle* has made a practice of quoting cylinder capacities in order to form a basis of comparison, and this practice will be continued in our columns. "C.C.," after all, is now well understood by novices and experienced alike, so that any horse-power denomination is immaterial, particularly since horse-power rating can be but a nominal one and in course of time become out of date, for the reason that increased power is obtainable from a given c.c. as the years roll by. Against the proposal to define horse-power by cubical capacity is the fear that daily or non-technical papers will drop the point in a 3·49 h.p. machine, and style it 349 h.p., and, again, mystery will be occasioned in novices' eyes when 4·99 h.p. is quoted, since 5 h.p. would (to them) prove so much more simple, and the fraction not worth consideration. By merely quoting 399 or 499 cylinder capacity, therefore, we consider that the position will be rendered clear to everyone, for, as we have said, those who desire to know the horse-power have it at a glance.

## Appearance.

IT is every rider's duty to himself, to his fellow motor cyclists, and to the pastime to turn out attired as neatly as is possible. It is no longer accepted as fact that old clothes and motor cycling are synonymous.

At one time, perhaps, the average motor cyclist was careless of his appearance, and conveyed an impression to the world at large that motor cycles were clothes tearing machines upon which it was impossible to present a neat appearance.

A change is now most apparent, and the increasing popularity of leather wear is fast removing the stigma of slovenliness which at one time was levelled at many riders. Overalls, too, are much neater than they were a few years ago, and motor cycles infinitely improved in their mudguarding, while the practice of wearing an ordinary cap with the peak behind is a rarity.

It is all a question of suitability of attire, which, for wet or fine weather, can always be neat if the rider takes the trouble adequately to equip himself.

An index to the advertisements in this issue will be found on Supplement ii.

# OCCASIONAL COMMENTS

By "IXION"

## Publicity in France.

I AM neither a politician nor a financier. My politics are limited to voting for anybody who is anti-waste, my finance to convincing Mrs. Ixion that she can keep house on far less than she imagines. So I will not dogmatise on the possibilities of the French exchange sinking enough to facilitate sales of British machines in France. But I happen to know that a correspondent at Lyons is correct when he asserts that the average French rider ranks British machines above all others, that the French market is particularly deficient in 500 c.c. sports machines, and that the French are peculiarly susceptible to sound propaganda work. He informs me that French motor cycle opinion esteems the Grand Prix de Lyon—run on May 21st—higher than our T.T. or the Grand Prix de France. So far I believe there is only one British entry—an o.h.v. Triumph. One deduces that our trade does not expect the French exchange to return to normal in the near future.

## Cost, Conservatism and Chances.

MOST trade brochures are dull as ditch water to the ordinary ride-and-cuss-it type of motor cyclists, of whom I am one. But I spent quite an eager half-hour over some recent Vickers catalogues which came into my hands the other day. The first dealt with Duralumin, which appears to be an ideal substitute for nickelled brass and copper. These two metals are the plague of a lazy motor cyclists's life, and as Duralumin doesn't rust, it tickled my fancy at once. I suppose it does not adorn our machines, for cost reasons, so let's hope it may get cheaper. The next pamphlet dealt with stainless steels. For example, Vickers stuck a piece of carbon steel and a piece of rustless on the top of their offices, and measured the weight lost by exposure to the particularly sulphurous air of Sheffield. They found that the carbon steel would be completely destroyed in twenty years, whereas a faint trace of the lump of rustless would survive after 400 years. If anybody will make rustless steel cheap enough for motor cycle purposes, he will do me a good turn, and Globe polish dividends a bad one. Finally, I knew that the market in rustless steel was hampered not only by its high original cost, but also owing to the expense of machining so hard a metal; but I did not know that softer rustless steels of good physical properties are now being produced. Heigho! When I am a grandfather, I suppose I shall see my posterity storing their motor cycles under the rhododendrons on my front lawn, whereas I suffer from housemaid's elbow contracted in trying to keep my machine bright inside a moderately weatherproof shed.

## Jumpers and Big Tyres.

YOU don't see the connection? Well, I don't mean the sort of "jumper" you mean. *You* mean one of those pink or mauve or yellow woollies, which used to be called sweaters till the girls copied them, and disdained mere white. *I* mean an inspector who dodges about a tram or 'bus route, and sees that the conductors have counted the passengers accurately and put all the coppers in the bag. A large West Country company (already mentioned in *The Motor Cycle*) has mounted its jumpers on 6-7 h.p. B.S.A. sidecars (the driver chases the 'bus with the B.S.A. whilst the jumper is toying with the tickets, so that no time is lost). These outfits are shod with 3in. Dunlop extra heavy covers—the "Magnum" wasn't invented when the outfits were bought. These 3in. tyres are averaging about 10,000 miles apiece. I have a lot of evidence that the ordinary 2⅜in. back tyre on a 500 c.c. sidecar seldom exceeds 2,000 miles in really heavy use. As the big tyre is far more comfortable and steers quite as well, utilitarian owners who have to consider expense should note the statistical experience of the large public service concern to which I refer.

## The Dump.

RECENT samples to hand include a couple of stout hide carrier straps from C. T. Penn, of 75, Abbey Road, Warley, Birmingham. He sells them at 1s., though they cost him nearly double, and advertisements costing £3 in various papers have only procured him one customer. He might as well try to sell footwarmers in the infernal regions, as market a touring requisite during frost *and* a nor'-easter. (N.B.—The straps are not long enough to secure a flapper.) Then the Luton Alum. (presumably "aluminium" is meant?) Casting Co., of South Road, Luton, forward a neat combination tool which performs four operations. It punches a belt. It extracts or replaces a chain rivet. It does ditto when the bush is broken. My only criticism would be that with its case it is as big as a repair outfit, though this does not affect its value for sidecar or garage work. So far as actual purchases are concerned I have been laudably economical of late, charm the gadget merchants never so wisely. But I have made an exception in favour of a B. & L. mechanical oil pump, which I am at present busy fitting to my o.h.v. Triumph. It will, I hope, save me from oiling up a plug, a pardonable weakness with a new engine.

*Ixion's "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.*

**Occasional Comments.—**

Riders of o.h.v. Triumphs should note that their spare plug ought to be somewhat short in the body; otherwise there is not clearance to get the special tube spanner over it; and when the plug is nearly red-hot——! The dump is topped by a pair of Fox's puttees. Not khaki, thank you. Serviceable as that shade is, most of us had enough of it in 1914-1918. But the same people now manufacture puttees in every conceivable hue. They don't advertise that they can supply them to match any machine from Indian red to Douglas blue and silver, but no doubt they could. Mine are a rather tony dove colour, to match my latest "plus fours."

## Truth Is Stranger than . . .

THE original of the subjoined letter is in my possession. It was received by a reader who advertised his machine. No prize is offered for a suitable answer to it.

I see you want to sell your 3¾ h.p. Scott motor bicycle. There are a few questions I would like to ask before I buy it.

1. Why does the Scott motor bicycle have no pipe from the handle-bars to the saddle?
2. Why does it have eleven chains? My friend says it has eleven, and I am not sure, so will you tell me?
3. Why has it a two-bicycle engine? My friend says nearly all motor bicycles have four-bicycle engines.
4. Why are there two * plugs, and where are the spare plugs carried?
5. Has a motor bicycle many valves? How many valves has the Scott motor bicycle?
6. Will a 3¾ h.p. Scott motor bicycle carry me and my sister up a steep hill without changing the gears too often? My sister will be sitting up behind me and will be holding on to me.
7. If I buy your 3¾ h.p. Scott motor bicycle, will I have to water it often to cool it? My friend says it is not kept cool by the air like my uncle's.

I am sure I will be able to keep the machery good if it has not rustyed too much. I would give you twenty-eight pounds, and I do not know how much more till you answer my questions.

Yours truly,

---

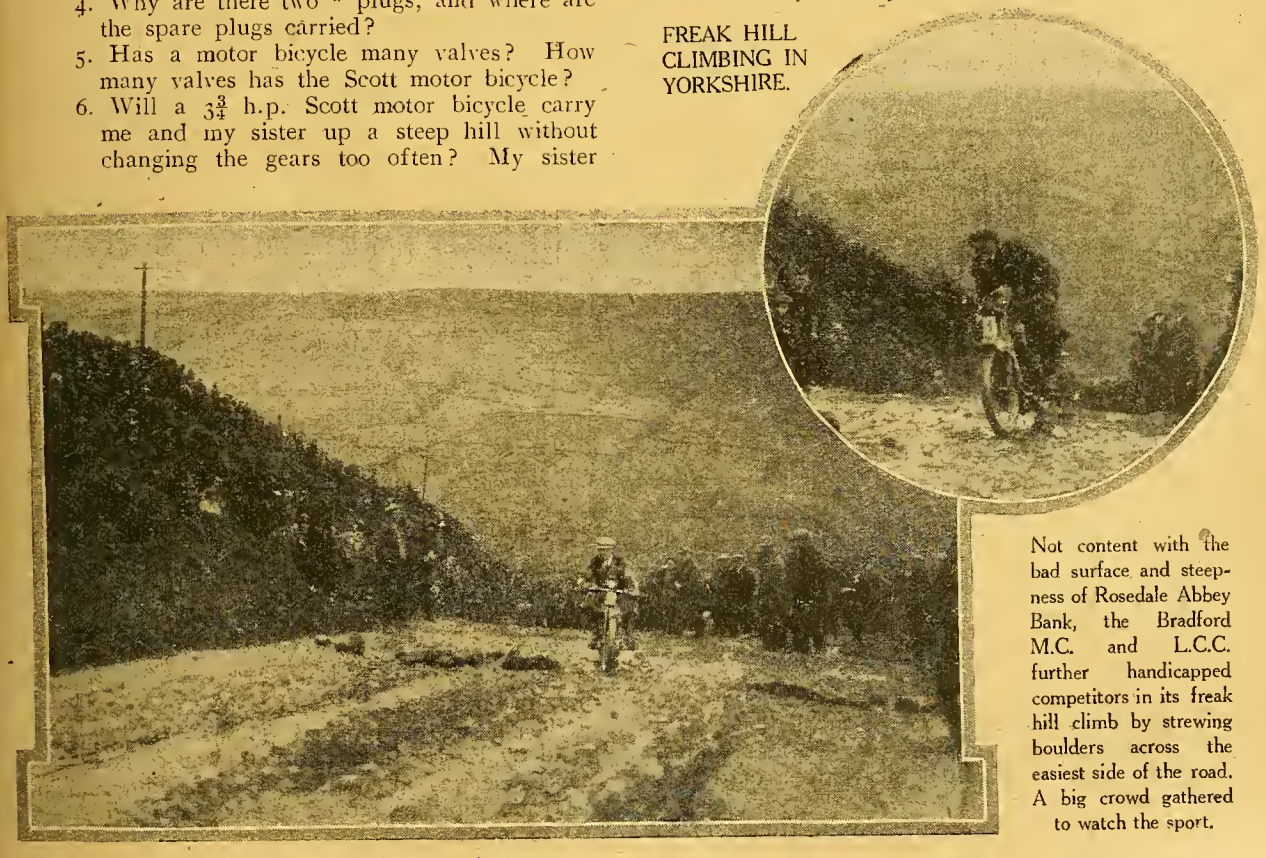
* I left out sparking.

I do not know if the Scott publicity man has bribed his little brother to perpetrate this letter in the hope of getting a free ad. But if he did, he deserves it.

## No More Solo Riding?

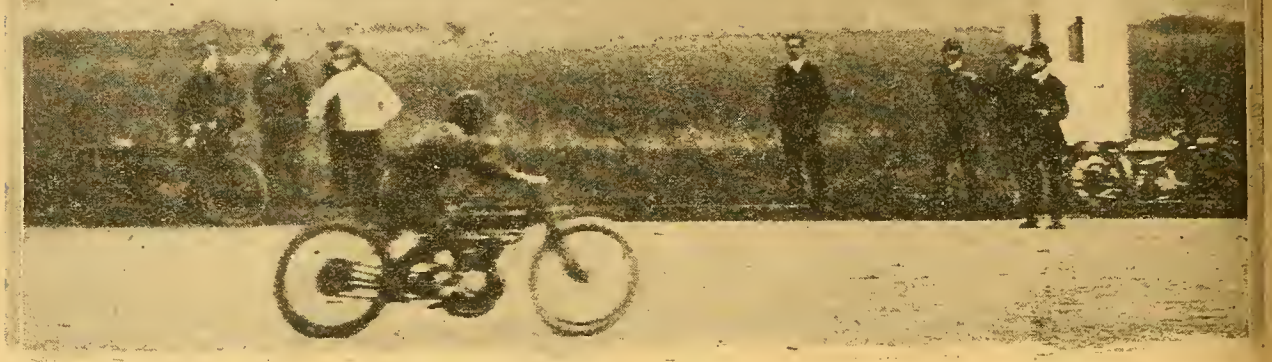
IF I carried all the tools which inventors and mechanics assure me that one needs, I should have to eschew solo work and fit a sidecar to take the kit. I vividly remember how I owned a chain-driver in 1905. Having a rough engine and no shock absorber in the transmission, it used to tear chains to pieces at short intervals. In those days we had no rivet extractors. We dismounted, and cursed, and got out a file, and looked round for a couple of hard stones. One of them served as hammer, and the other as anvil. The tang of the file was utilised to punch out the rivet after filing as much as possible. To-day almost every post brings me a new patent rivet extractor, most of which are excellent for garage use, but too bulky to carry solo.

FREAK HILL CLIMBING IN YORKSHIRE.



Not content with the bad surface and steepness of Rosedale Abbey Bank, the Bradford M.C. and L.C.C. further handicapped competitors in its freak hill climb by strewing boulders across the easiest side of the road. A big crowd gathered to watch the sport.

# 1922 Speed Possibilities.



## Which Figures will Rise or Fall on Brooklands for the Flying Kilometre in the Different Classes? Some Varied Opinions.

IN attaining over 100 m.p.h. on his o.h.v. Douglas, C. G. Pullin's recent achievement came as a surprise to most of our readers, but to those behind the scenes at Brooklands it had been acknowledged at the end of last year that 100 m.p.h. with a 500 c.c. engine was a likely possibility during 1922. It is no secret that Pullin took the wind out of the sails of other trackmen in setting up the records which it is prophesied will not stand for very long. An o.h.v. Norton is reported to have done over 100 m.p.h. on two unofficial occasions, and at the first favourable moment we shall probably see O'Donovan or Judd improving on Pullin's figures, although it must be admitted they have a hard task before them.

Pullin's half-mile at 100.61 m.p.h. (time, 17.89 secs.) is not an officially recognised distance; therefore, so far as official records are concerned, 100 m.p.h. with a 500 c.c. engine has not yet been attained.

Who will be the first to place the magic figure on the record lists in Class C?

Always in the past there have been distinct gaps between the kilometre and the mile speeds. When the last-mentioned distance has been covered at a speed exceeding 100 m.p.h., there still will be the mean speed international record, *i.e.* the mean of timed miles in opposite directions.

The mean speed record for the mile is at present held by R. N. Judd (Norton), who covered the distance one way at a speed of 91 m.p.h., and in the opposite direction at 86 m.p.h., a mean speed of 88.39 m.p.h.

### LEADING RIDERS' FORECASTS.

**1922 Speed Possibilities.—**

It will be seen that our super tuners and riders have still a long way to go. Will it be done this year? It must be remembered that a 1,000 c.c. machine has yet to accomplish the same feat.

Everyone competent to judge agrees that such a performance with a 500 c.c. engine is not yet in sight. Judd, the Velocette and Norton track exponent, tells us that there is great difficulty in holding a comparatively light machine on the slight bend and on the rough surface at that point of the track where records are made.

**Favourable Conditions and One-Way Records**

In the opinion of F. B. Halford, present holder of the 500 c.c. 1-hour record on an o.h.v. Triumph, too much is made of a one-way kilometre record in which so much depends upon favourable weather conditions, and he regards mean speed records (with and against the wind) as being more indicative of power and speed.

Amongst well-known racing men and those who are in close touch with the attainment of high speeds, we find very few who prophesy a speed for the kilometre which provides sufficient margin to make the 100-m.p.h. mean speed mile record a probability this year. As is to be expected, there is a wide diversity of opinion, also concerning the types of engines which are likely to attain the highest speeds in their respective classes.

F. B. Halford does not include one V twin simply because for such sprint work as the flying kilometre he anticipates that this type of engine in either the 750 or the 1,000 c.c. sizes will gradually find itself more and more handicapped as engine speeds increase, due to the excessive loading of the crank pin. This, he says, particularly applies to the larger class, in which he believes the 4-cylinder will eventually oust the rest of the field.

This view is a new one to motor cyclists generally, but Major Halford is in a unique position to judge these matters, being closely associated with Ricardo & Co., Ltd., whose activities are greater than is generally appreciated.

It is thought that what efficiency may be lost due to increased frictional losses of the "four" will be compensated by the more even torque of this type of engine. Even in engines of under 750 c.c. the 4-cylinder is considered to be a possible alternative to the flat twin. In smaller sizes Major Halford favours the single cylinder engine.

In the accompanying series of lists the prophecies of many riders and prominent men in touch with recent developments are tabulated. The figures relate only to the kilometre records, and it will be seen that there is great diversity of opinion as to the types of engines which will achieve record-breaking speeeds, and also in some directions there are some very optimistic expectations of great increases.

# TWO SPARKS AND THE TWO-STROKE.

## Some Notes of Special Interest to Scott Riders.

THERE is no doubt that a two-pole plug, run in line with a single pole, one placed in the cylinder head (preferably the single pole) and the other in the side of the cylinder, helps considerably to increase the engine revolutions. I have used this system for several months, and can tell immediately when one of the two-pole plugs cuts out. The engine continues to pull fairly sturdily, but somehow it seems immediately to lose its liveliness. Scott enthusiasts who are out for high efficiency will find the tip worth trying.

The two-pole plug is, I think, preferable to a two-spark magneto. My experiences of the latter were confined to a pre-war magneto of Bosch make, and were not particularly happy. The advantage of the double plug system is that one obtains an intensified spark, which minimises plug troubles in the case of an oily engine.

The two-pole plug is, however, a *rara avis*, generally to be obtained only from the makers. In the Scott Sociable one of Mr. Scott's own design is used; it is made by the Lodge people, who for some years have marketed an alternative design.

The Scott Motor Cycle Co. learnt during the T.T. races some years ago that two sparks per cylinder produced improved results; some will recall "Tim" Wood putting up a record lap, then retiring with a burnt-out magneto. So said the reports immediately succeeding the race; but when it came to dissecting the magneto, it was found not to be burnt out, but to be suffering from something new in the way of magneto ailments, the result of its peculiar design. It was, of course, a two-spark magneto.

I had the same apparatus a little while later, but it was not so satisfactory as the two-pole system of to-day. When employing the two-pole system it is necessary to keep the plug points very finely adjusted, as, there being two gaps, there is a much greater strain thrown on the insulation. If the points are a fraction too wide, the spark will choose any course, even the safety gap, rather than the one it is intended to take. Thus the points need fairly regular attention, as the great heat of the spark quickly widens them, and the resultant shorting takes a variety of forms.

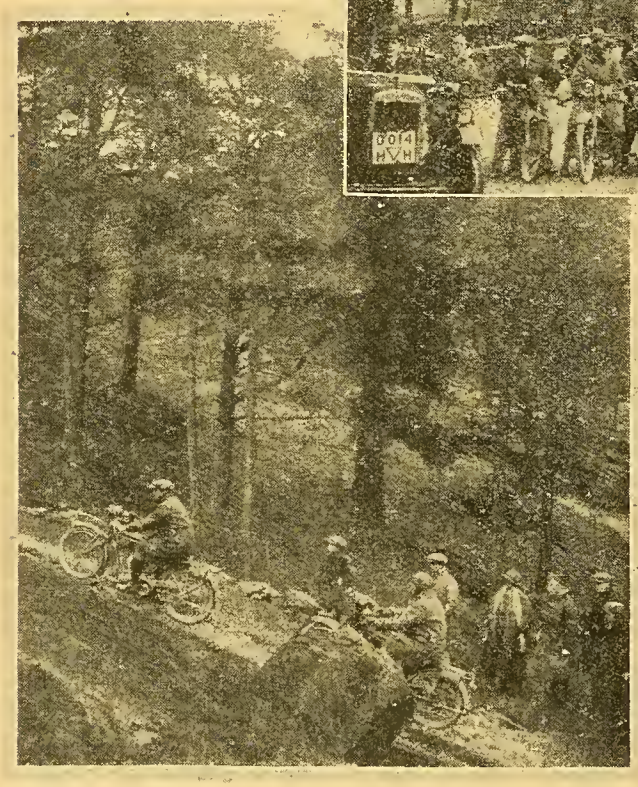
It is a curious fact that, while the power of most two-strokes is decidedly enhanced by two sparks, the addition seems to make no difference to a four-stroke. Incidentally, a two-stroke so equipped may tend to pink, in which case the way to get the best results is to find just the right mixture of petrol and benzole, which varies according to the tastes of individual engines. To obtain maximum revolutions, the quantity of benzole should be cut down until the pinking stage is almost reached, as it affects quick acceleration. Unfortunately, few two-strokes can accommodate more than one sparking plug.

H. MORTIMER BATTEN.

# SEARCHING FOR A LAKELAND TRIALS ROUTE.

## Little-known Corners Explored for a Forthcoming Event.

By GEORGE D. ABRAHAM.



On Tilberthwaite Hill, part of the proposed course of the forthcoming Northern Centre (A.C.U.) Open Reliability Trial. The riders, who are officials of the promoting club, are R. L. Williamson, on a Norton, and W. B. Anderson, on a 2¾ h.p. A.J.S.

At Tilberthwaite Farm, Coniston. The trials committee and friends who met to discuss the final course.

WITH the coming of spring in Lakeland, trials seem very much in the air. Enthusiasts are keenly on the hunt for new hills, and many a quiet dale is stirred by the lively music of motors striving lustily for mastery of the heights.

The forthcoming open trial of the Northern Centre (A.C.U.) on May 13th has roused unusual interest, and after a recent week-end outing the full course may now be considered complete. Many old favourites are to be included, but several new sections will be added. The lunching place will be the New Dungeon Ghyll Hotel in Langdale, and in this Westmorland section there will be many interesting features.

On a fine day, and with the surface fairly set, the notorious Blea Tarn Pass loses most of its terrors, but under wet, stormy conditions, which sometimes occur thereabouts, its inclusion in an open trial is hardly fair. This was proved during the Northern trials on Good Friday. Blea Tarn Pass will not be climbed this year, and at the outset it should be stated that a perfectly fair course has been chosen, with nothing of the Wrynose and Hard Knott element about it.

### Where Freak Hills Abound.

A recent outing of the Route-finding Committee lay in the Tilberthwaite area, and probably nowhere in the district are so many freak hills to be found. Unfortunately, these are usually roads that curl up to the many slate quarries, and they are not suitable for through routes.

A large party of keen hill-hunters foregathered at the famous Swan Hotel in Grasmere's peaceful vale. By the way, this splendidly renovated old hostelry on the roadside of the main highway is worth keeping in mind as a welcome house of call by all motor wanderers in Lakeland. In glorious sunshine, the more staid section of the party journeyed to Tilberthwaite, over Oxenfell. It was sheer delight to thread the daffodiled depths of the vales from Grasmere to Rydal, and so through speed-curbing Ambleside to Skelwith Bridge. The emerald gleam of larches lightened the way, and up we climbed to breezy heights where the promise of spring had scarcely come, and snow-capped loftiness loomed overhead. Once over the summit, it was a

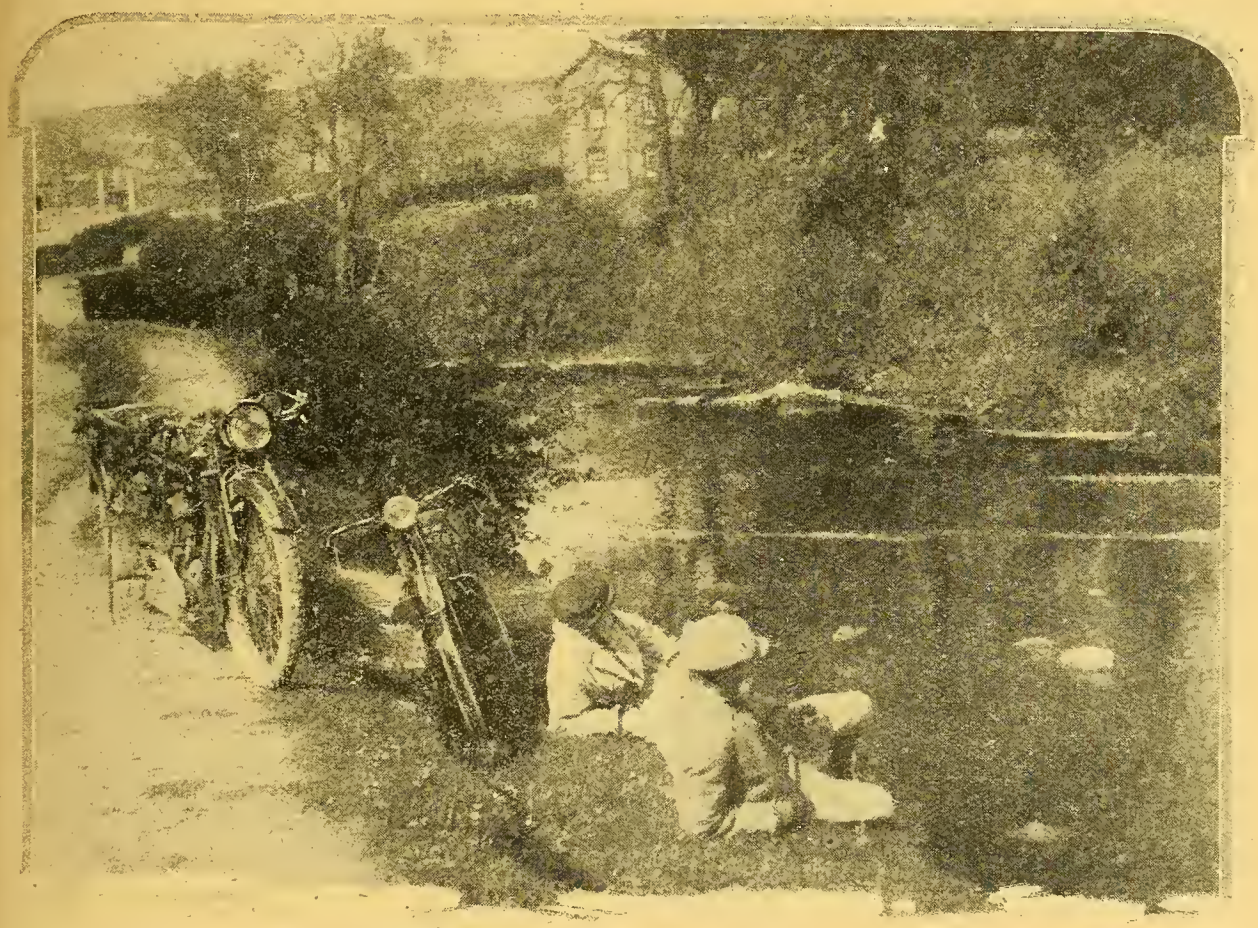
**Searching for a Lakeland Trials Route.—**

speedy run down through the softer airs of Yewdale, until about two miles short of Coniston an awkward sharp turn on the right led up into the wild recesses of Tilberthwaite, with its famous crag-girt glen and quaint, old-world farms. The hill enthusiasts had arranged to travel by the more mountainous route over Red Bank, Ullett Hill, and Colwith, and wait for us at Tilberthwaite Farm.

After a journey of a mile and a half through the pine woods a scene of much liveliness was encountered at the ford across the Brathay. This is the most notorious water-splash in Lakeland; a neighbouring farmhouse keeps a special rope to haul cars out of their watery dilemma. After inspection, there was no mistaking the deceptiveness of the place. It was about sixteen yards across. A footbridge spanned the ford. Apparently the road kept close by this, but there the water was four or five feet deep. The real road through the ford curved far away from the footbridge, and was from six to ten yards distant. There it was quite easily passable by cycles and small cars alike. Unless the weather is bad, the Colwith watersplash will probably be included in the forthcoming trial, but, failing suitable conditions, an alternative avoiding route of equal mileage will be used. Keeping to the shallows, all the machines of the exploring party came through the ford successfully. With the machines properly marshalled, the Colwith Ford deserves a place in what is certainly a much easier course than that of last year.

After leaving this a way was made back to Tilberthwaite Farm, where a tricky "hairpin" gave approach to the new Tilberthwaite Hill. This led up and over to a fascinating mountain road which leads to near Fell Foot in Little Langdale. Thence the Trials route will avoid Wrynose and go over Blea Tarn Pass from the southerly side using the well-known test hill for a brake-trying descent into Great Langdale.

At Tilberthwaite some very fine ascents were made, notably by the following riders: Williamson and Morton (Nortons), Anderson (A.J.S.), Pape (Scott), Jenkinson (A.B.C.); Reid (P. and M.), and Harrison (Sunbeam). Of the sidecars, Tiffen's B.S.A. was very speedy. Other interesting exploratory work was undertaken, then came the deluge. 'Midst a veritable watersplash the merry party scattered homewards in all directions, thus ending a fascinating and useful outing.



THE PLEASURES OF THE OPEN ROAD. Ravenstonedale, in Westmorland, is the Mecca of thousands of motor cyclists and holiday makers. The old world village situated in the heart of the Lake District abounds in historic interest and varied beauty. The machines are a 5 h.p. N.U.T. and a 2¾ h.p. Douglas.

# MOTOR CYCLES OVERSEAS

A competitor in the recent Bombay to Poona Reliability Trial crossing the Jhana bridge, about twenty-four miles from Bombay. The illustration conveys a good idea of the excellent roads to be found in the neighbourhood of big Indian cities.

## Views and News from our "Foreign" Mail Bag. Some Candid Criticisms.

ALTHOUGH widely separated by every diversity of climate and location the keen spirit of enthusiasm which has made the British motor cycle movement so strong flourishes in many corners of the earth.

Naturally, prevailing conditions modify the viewpoints of overseas motor cyclists, so we get very contradictory letters on similar subjects from time to time; nevertheless, the essentially British sport associated with motor cycles is a universal attribute, as is shown in the subjoined selection from our letter bag.

### Ceylon.

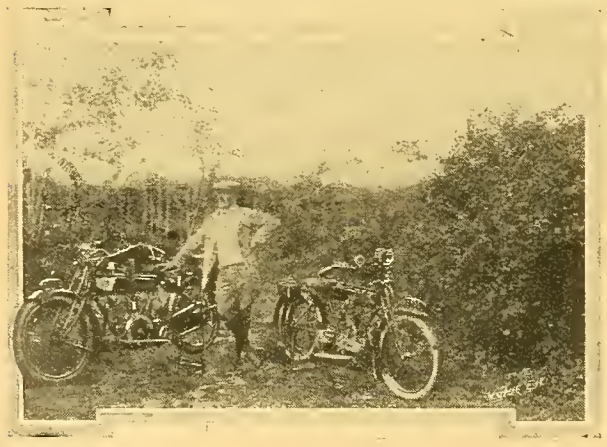
From the fair isle of Ceylon we have received the report of a 189-mile trial at 20 m.p.h. Our correspondent writes as follows:

"Thirty competitors took part. The medium-powered Indian showed itself the most popular motor cycle on our market, being represented by eight competitors. Of B.S.A. and Ariel machines there were three of each. The Wooler, Zenith, Ace, Harley-Davidson, and Triumph were each represented by two examples, while there was one machine of each of the following makes: N.S.U., Royal Ruby, Rudge Multi, Frere, and A.B.C.

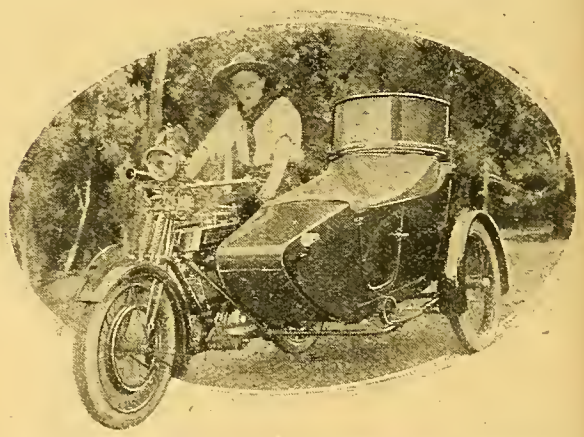
"The first stage of the run, from Colombo to Kandy, 90 miles, presented only the usual hindrances of sleeping bullock-cart drivers, excited pariah dogs which make the centre of the road their kennel, and still more excited stray cattle, which sometimes suddenly try to race with motor cycles. There were no serious accidents, however.

"The next section, from Kandy to the Yatiyantota Resthouse (51 miles), presented the greatest difficulties, as the dangerous Ginigatenna Pass and several steep hills and narrow and sharp turns had to be negotiated, but the delightfully cool climate modified the strain of the extra exertion very greatly. It is a pity a little time was not allowed to look over the beautiful country from the Ginigatenna hill-crest, or at the many other points noted the world over for their remarkable scenery.

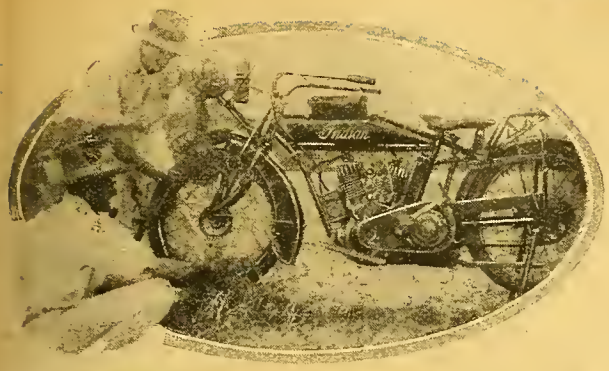
"The next run was for Ruanwella, a matter of seven miles, through undulating country thickly studded with dagobas and other interesting ancient relics. From here to Urupola (12 miles) was marked down for a non-stop test. The rest of the 28 odd miles back to Colombo, through many pleasing hamlets, presented no extraordinary motoring difficulties. The run was voted on all hands a delightful event.



A Blackburne twin and a New Hudson two-stroke in the Bandoeng district of India.



An Mbaban rider who has covered 17,000 miles in Swaziland, S.A., on his Enfield outfit.



When will unpuncturable tyres become universal? Riders of an Indian on a wayside in Rhodesia.

"That 80 per cent. of the machines should have survived so exacting a road and climate test speaks well for the reliability of the modern motor cycle.

"The Ceylon Motor Cyclists' Club has made arrangements to hold a six-hours' inter-district motor cycle competition, with the route laid entirely in the cool and beautiful but hilly up-country. In the middle of the run is included a half-hour's rest at the Newara Eliya Grand Hotel. Newara Eliya is the sanatorium of Ceylon.

"The winning team will be found by means of an acceleration test upon the steepest part of the Ramboda Pass, and by a high-speed half-mile test. The general average is, however, fixed at 18 m.p.h."

### India.

The Matchless motor cycle was quite an attraction at the Bandoeng Annual Industrial Fair, and was purchased by the Board of the Industrial Fair to be awarded as a prize to visitors. This make of machine and also Blackburnes are being demonstrated by B.C.A. (India), Ltd., at Bandoeng.

### Norway.

A correspondent in Scandinavia (who signs himself "V.B.T."), writes on ground clearance as under:

"I have twice in this country come to a standstill through the under parts of the machine hitting the mud when the back wheel slid into a particularly deep rut, and on Scandinavian roads this would continually be happening. There is no need to build English sidecar outfits quite as low as it is usually done.

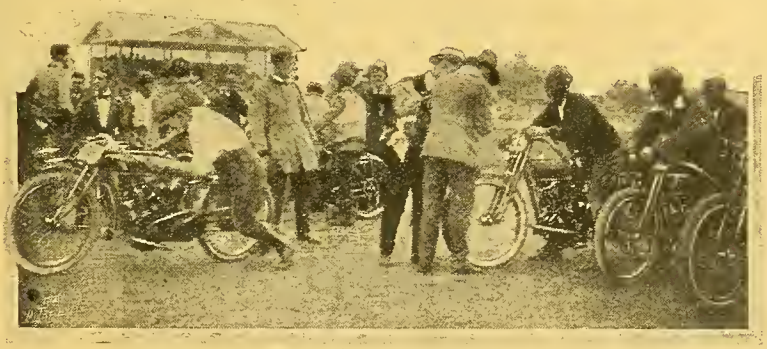
"With the heavy gloves used in Norwegian winters, the English short control levers are difficult to manage. The twist-grip throttle, foot clutch, and long gear lever are far better in cold weather.

"The drip-feed lubrication is moderately efficient in England, but at the temperatures often experienced in more northerly countries this method of lubrication would be unreliable.

"The chain cases also, though adding greatly to the appearance, are certain to become a nuisance before the machine has run for many years. My own experience of a broken chain in a forward cast aluminium chain case, and the consequence of its jamming under the gear box sprocket, are sufficient to convince me of the danger of these contrivances on solo machines.

"The difference of opinion in England and Norway is interesting. At home it causes comment if one rides a twin cylinder Sunbeam solo, whereas in Christiania it is very common to see four-cylinder Hendersons ridden solo, and very fine they look. In the surrounding country one more often sees Harley-Davidsons or Reading-Standards ridden solo than with sidecars."

A. F. Healey and his 6 h.p. A.J.S. outfit, the mudguarding of which he specially commends for pioneer work.



In Victoria Park, Sydney, where the M.C.C. of N.S.W. held its recent speed trials. (Top left.) T. Benstead (7-9 Harley-Davidson), winner of the 200 mile championship of Australia and various championships, and one of the best all-round riders in the Commonwealth. (Top right.) A. Clifton (7-9 Harley-Davidson), a successful competitor in speed events.

### Swaziland.

On the previous page we illustrate an 8 h.p. Enfield sidecar which is giving every satisfaction in Swaziland after having completed 17,000 miles. The owner in sending the photograph refers to it as one of "Ixion's" pet aversions, *i.e.*, a silent twin. We are told that the Enfield does not rely on vaseline and dope for protection, and is really silent. The buzz of the speedometer drive and hiss of carburetter can be easily heard above the whir of the engine. Can any overseas rider want anything better, especially when it is allied to the Enfield standard of reliability?

**The Motor Cycle Overseas.—**

### S. Rhodesia.

Colonial roads are discussed by a Bulawayo correspondent—A. F. Healey—who writes:

"I noticed in a copy of *The Motor Cycle* that riders were clamouring for a *less* Colonial section in 'the Six Days'.' The so-called Colonial section is better than some of our town roads. Roads! When you have to get off every few miles (or rather hundred yards) and scrape the mud from the wheels, and get stuck up to the hubs in Rhodesian mud, riders at home would have reason to complain; but it is an everyday occurrence here, during the wet season.

"Then, again, water-splashes. We have water-splashes here, not a few feet wide, but a hundred or more, and deep at that. I owned a well-known 4½ h.p. single a year ago, and was let down through water getting into the magneto. Why don't manufacturers fit magnetos behind the engine, such as the Sunbeam and Rover? It costs no more, is neater, and more suitable for overseas conditions.

"At present I own an ex-W.D. 6 h.p. A.J.S. The sidecar is home-made, and cost £7 10s. It is all wood, and took six weeks to make, working every now and then in my spare time."

### New South Wales.

One of our Australian correspondents comments upon British motor cycles for service in New South Wales. He writes:

"There are 97,000 miles of roads in N.S.W., and of these 36,000 miles are in their natural state—unmade and unmetalled. You can see there are some 61,000 miles formed which, although not all in good condition, can be used. In N.S.W. alone there are 11,066 motor cycles actually in use.

"There are many British machines eminently suitable for general purposes, but which are unobtainable here. Manufacturers do not advertise their prices for overseas sales. If they advertised the export price one could easily calculate the final cost, as shipping charges, etc., could be found out for inquiring.

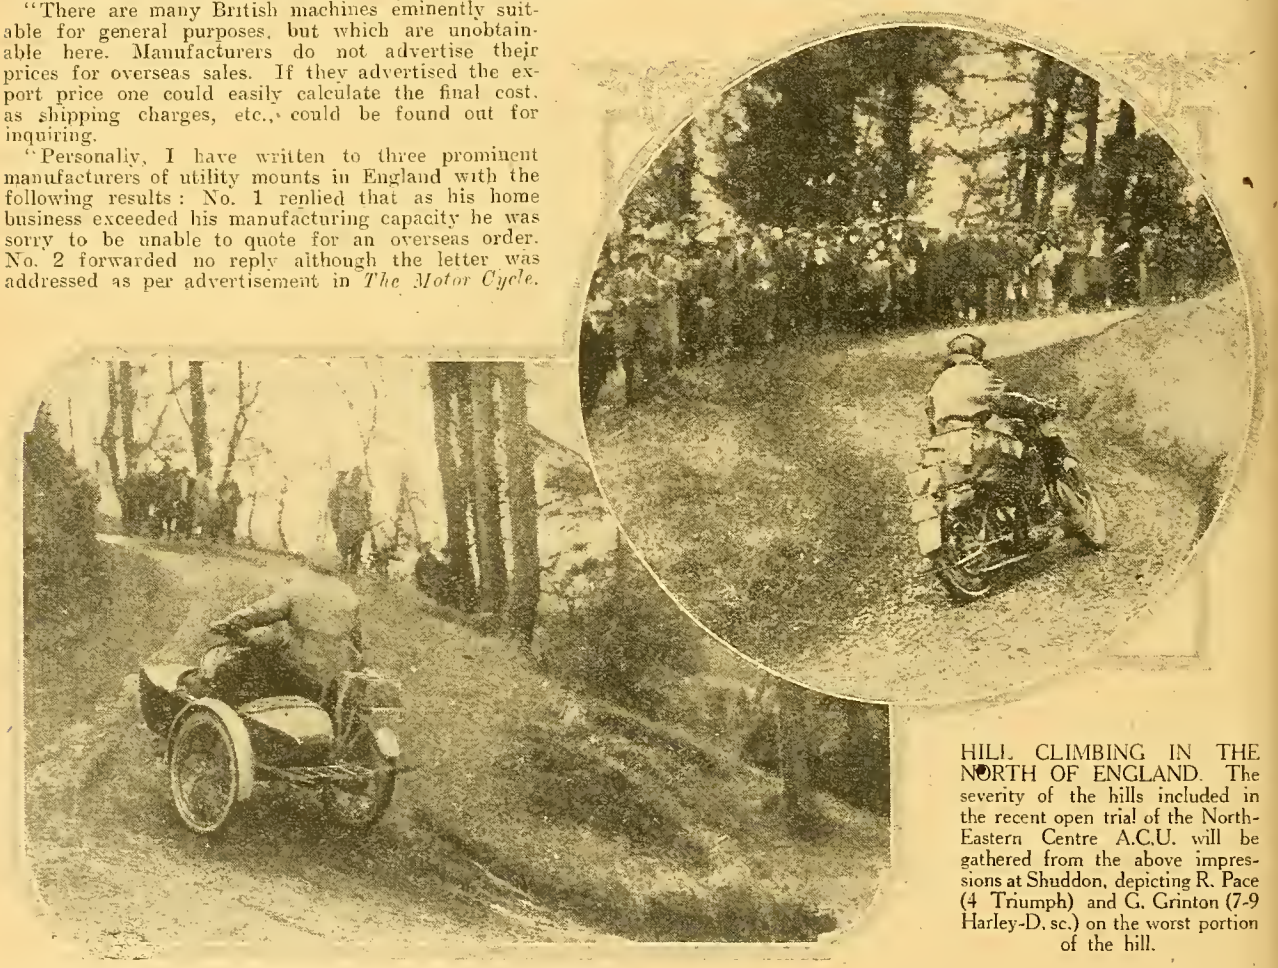
"Personally, I have written to three prominent manufacturers of utility mounts in England with the following results: No. 1 replied that as his home business exceeded his manufacturing capacity he was sorry to be unable to quote for an overseas order. No. 2 forwarded no reply although the letter was addressed as per advertisement in *The Motor Cycle*. No. 3 answered to the effect that they had a representative in Melbourne and that any transaction would have to be through him.

"Writing to this gentleman, he answered that he would have to enquire current price from England, and that it would be impossible to obtain a machine before six months unless he cabled. Should I care he would cable, provided I paid the cost of the cable whether I placed the order or not. Does this encourage one to get a British machine when one can get immediate delivery of any American machine? Everyone cannot wait.

"I have been asked by the hon. secretary of the M.C.C. of N.S.W., Mr. J. A. Fair, to mention the benefit derived by the affiliation of that club with the A.C.U. The M.C.C., which is the premier club of N.S.W., if not all Australia, has over thirty suburban and country clubs affiliated with it, and governs as an A.C.U. centre. There are only two clubs unaffiliated, but as both are mainly social clubs little is lost by their absence.

"The M.C.C. interprets the rules fairly and properly, and there is no chance of any two clubs running contests on days and clashing with one another. Before, that was practically always the case, as our local governing body always had club leanings. The A.C.U. scheme has brought about a great revival of interest in club life of the motor cycle in New South Wales.

"It has been very gratifying to motor cyclists generally and the M.C.C. in particular to know that the American club officials are seriously considering the advisability of adopting our method of hill-climbing in place of their machine-wrecking events. Our climbs are on the knock-out principle—two men climb at the same time and the best man wins. There is little doubt that this is the best system by far, and very much more interesting than merely timing the riders up the hill singly, as seems to be the vogue in your country."



HILL CLIMBING IN THE NORTH OF ENGLAND. The severity of the hills included in the recent open trial of the North-Eastern Centre A.C.U. will be gathered from the above impressions at Shuddon, depicting R. Pace (4 Triumph) and G. Grinton (7-9 Harley-D. sc.) on the worst portion of the hill.

# LONDON-LAND'S END RESULTS SUMMARISED.

## 332 Entries. 294 Starters. 76 Gold Medals. 121 Silver Medals. 2 No Awards.

IN winning the President's Cup, presented by J. K. Starley, Esq., in the London-Land's End run, a remarkable performance was made by A. G. Wall (398 A.B.C.).

In the official programme Wall was down to ride a Velocette, but he elected to change his mount at the last minute and was allowed to ride the A.B.C., a machine with which he was quite unfamiliar. He carried no watch, and broke his speedometer, yet nevertheless rode dead to schedule throughout the run. In the solo class there were 121 entries, nine of them proving to be non-starters; in addition to the President's Cup winner, 43 won gold medals, 40 were awarded silver medals, and 28 retired.

Of the 99 sidecar entrants, 92 started; of these 17 gained gold medals, 37 silver medals, and 36 retired. The cup presented by the captain of the club, Mr. W. H. Wells, was won by F. J. Ellis (993 Matchless sc.). One of the sidecar drivers, W. H. Bashall (678 Martinsyde), finished the journey, but arrived too late at the finish to gain an award.

Special mention must be made of the sportsmanlike act of Mr. W. H. Elce, the actual winner of the cup presented by himself for the best performance on a three-wheeled cycle car, who generously passed on the cup he had won to the competitor who made the next best performance, H. F. S. Morgan. In this class there were one gold and two silver medal winners.

# A TWO-STROKE WITH POPPET VALVES.

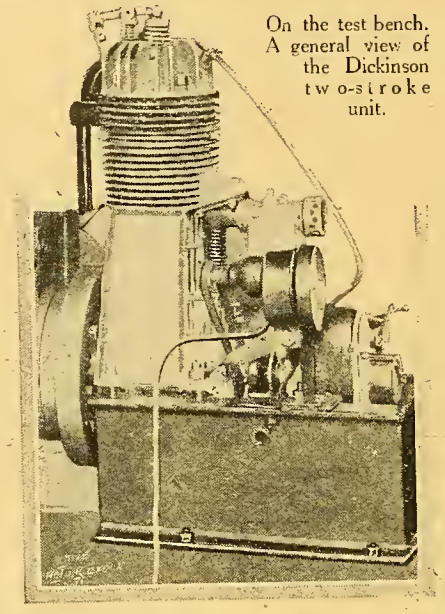
## Attempting to Combine the Advantages of a Two-Stroke with the Efficiency of a Four-Stroke. The Dickinson Engine.

MOST two-stroke users are aware of the disadvantages of this simple and popular type of engine, and it was with the idea of overcoming these failings that the engine here described was designed. It has a bore and stroke of 75×79 mm. (349 c.c.), and incorporates many startling departures from usual practice.

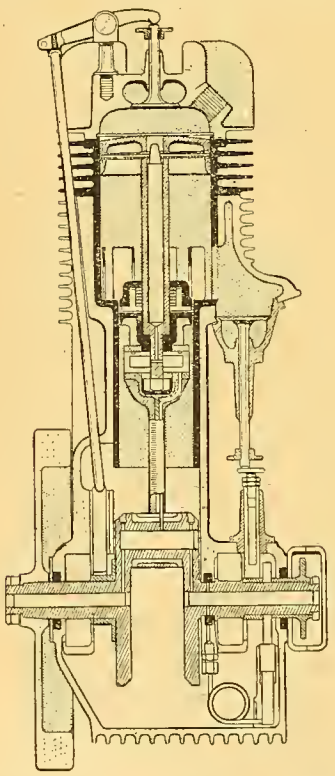
Firstly, it must be mentioned that it follows four-stroke practice in that it has mechanically-operated valves which are actuated by cams on the main shaft of the engine. The cylinder is of cast iron, with two-thirds of its length enclosed in the aluminium crank case, the upper portion of which is ribbed, to form part of the cooling system. The greater portion of the cylinder, therefore, is in the nature of a cast iron liner in the aluminium case. The cylinder barrel is of considerable length, the lower portion being a smaller diameter than the working portion, and forming a cross-head guide.

### Steam Engine Type Piston.

We must now turn our attenlion to the piston, which in design somewhat resembles that employed in a steam engine, being very shallow as to depth. It is provided with radiating fins under its head and has three grooves, in each of which there are three thin rings. The piston rod is in one with the piston head, and is filled with oil, which leaks out through a hole at the bottom, effectively sealing the gland through which it passes at the cylinder base. At the bottom of the piston rod is a cross-head, which carries the gudgeon pin and small end of the connecting rod.



On the test bench. A general view of the Dickinson two-stroke unit.



Steam engine type piston and crosshead and general arrangement of valve gear are shown in this sectional drawing of the engine.

### Functions of the Engine.

On the side of the crank case is the inlet port and valve chest, and this is in communication with a ring of vertical slits in the lower part of the wall of the working cylinder. In the head of the cylinder is the overhead exhaust valve, both valves being worked by tappets and cams on the crankshaft. As the piston rises, the inlet valve opens and the lower part of the cylinder is filled with gas. On the downstroke this gas is compressed, and 20 mm. before the bottom of the stroke the exhaust valve opens. The piston being very shallow and the slits in the cylinder wall being of greater depth, it follows that at the end of its stroke the compressed gas can escape from the lower to the upper side of the piston. The effective depth of the inlet ports, however (*i.e.*, that portion of the slits above the piston), is only 6 mm., but the area is large, since they extend round the cylinder, and consequently transfer takes place in a small period of piston travel.

The rush of the incoming gases from below results in the complete expulsion of the exhaust gas above (the valve remains open slightly after bottom dead centre), hence the excellent scavenging of this engine, which results in the Dickinson engine giving the remarkably good petrol consumption of 0.6 pint per h.p. hour, the same as a four-stroke engine of a similar cubic capacity.

### High Compression Ratio.

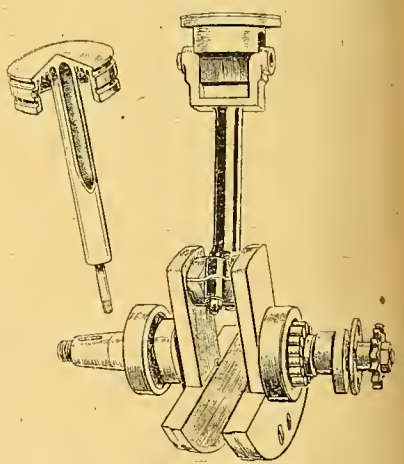
Instead of the usual compression ratio of 4 to 1, actually a 5¼ to 1 ratio is used, the compression pressure being between 75 and 80 lb. to the square inch. As has already been shown, the compression takes place in a separate chamber, and the crank chamber is isolated from the mixture by means of a diaphragm at the cylinder base and a special gland consisting of a split bush, held together by a steel contracting ring.

### Other Mechanical Features.

Roller bearings support the one-piece, outside flywheel, crankshaft, and the big end bearing is lined with white metal, and is of the split type. It will be noticed that the inlet valve works right away from the heat of the engine.

Lubrication is effected by means of a simple valveless oil pump in the sump, driven off the main shaft, and the lubrication throughout is forced, the crankshaft being hollow and the oil passing up the connecting-rod, lubricating both of its bearings, and eventually passing by way of the hollow piston rod into the cylinder proper, which it lubricates, and whence no oil can escape. Thanks to this arrangement, the oil consumption is excellent. Oil is delivered to the various bearings at a pressure of 20 lb. to the square inch, and the quantity delivered is adjustable from the exterior of the engine.

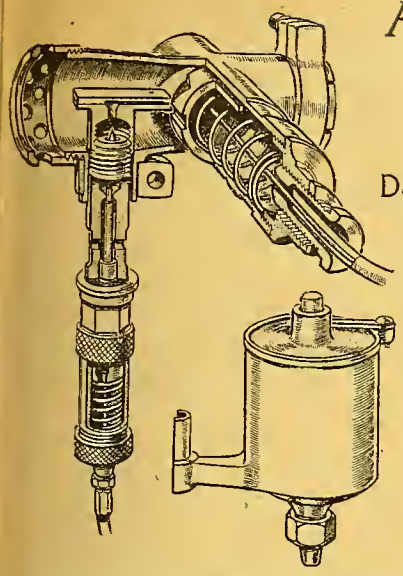
Not only are greater economy and ample power claimed for this engine, but increased flexibility as well. In the experimental works of Leopold Ward, Harmood Place, Chalk Farm, London, N.W.1, where it was built, the engine has been found to develop 6.2 h.p. at 2,700 r.p.m., while it can be made to turn over at 4,000 r.p.m. Its inventor is Mr. R. Harland Dickinson.



One piece crankshaft, connecting and cross-head; the piston and hollow piston rod are shown in part section.

# A VARIABLE JET AUTOMATIC CARBURETTER.

## Detail Improvements in the Wex. Handle-bar Operated Variable Submerged Jet.



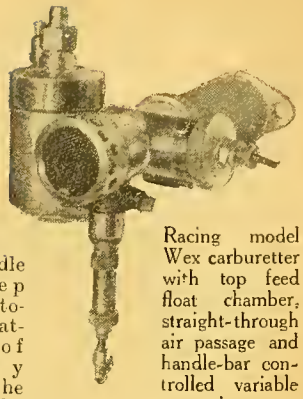
Sectional view of the latest Wex carburetter showing the taper needle jet control, the diffuser, and the throttle barrel which uncovers the diffuser as the throttle is opened.

ALTHOUGH first appearing as one of the single-lever variety, the Wex carburetter is now to be fitted with two controls. It still remains automatic in its action, however, for the second lever merely serves to actuate the tapered needle running through the jet, so controlling the aperture of the latter.

It is in the vaporising chamber of the Wex that the chief improvements are embodied. There is a submerged jet which limits the amount of fuel used at large throttle openings, while screwed above it is a diffuser, through which the petrol issues by way of a narrow slot. The amount of mixture passing to the engine is controlled by a barrel throttle, and this also regulates the amount of air which rushes in behind the diffuser and vaporises the spirit. The diffuser slot is tapered, and is of approximately the same length as the diameter of the air intake, and it will be seen that at any throttle opening a portion of the diffuser is uncovered, the illustration showing the groove in the throttle barrel which effects this.

### Fuel Control at All Speeds.

At high speeds the fuel flow is controlled by the fuel level in the well, since the submerged jet is not influenced appreciably by the depression in the inlet pipe, and therefore at very high speed the weaker the mixture tends to become, as the level is then low; at low speeds, however, the level is normally high. The tapered needle is a step further towards the attainment of economy through the control of the fuel.



Racing model Wex carburetter with top feed float chamber, straight-through air passage and handle-bar controlled variable jet.

It has been found in use that when the machine is pulling hard on a hill closing the throttle has very much the same effect as closing the air with a two-lever carburetter. To enable the carburetter to be accurately tuned spare submerged jets and spare diffusers can be supplied.

We have tried earlier models fitted to a 2¼ h.p. New Hudson, with which ample flexibility was obtained, and also on a Scott Squirrel, which proved to be not only flexible but capable of good acceleration.

The racing model works on exactly the same principle as the carburetter just described, but has an absolutely straight-through passage to the inlet and is provided with a top feed float. The makers the Wex Carburetters, Ltd., 319, Fulham Road, London, S.W.10.

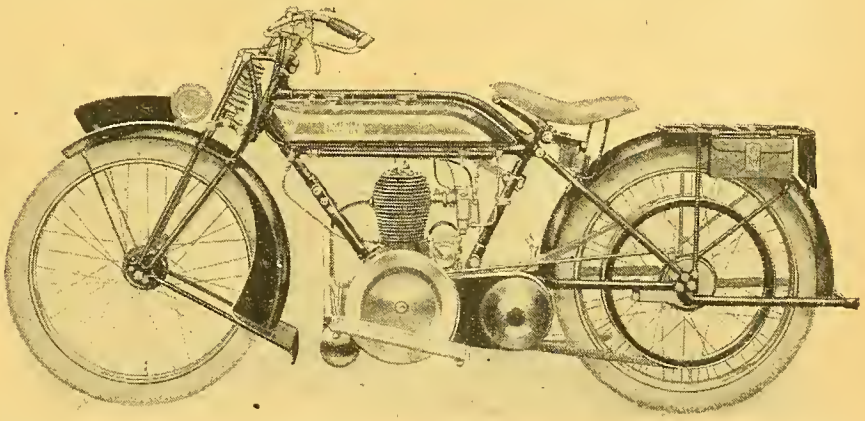
---

# NEW SLEEVE VALVE MEDIUM-WEIGHT.

## The Barr & Stroud Engined Coventry Mascot with Practical Specification.

AS an engine the 350 c.c. Barr and Stroud (70×90.5 mm.) is fast earning an enviable reputation. Silence and flexibility are outstanding points in its favour but in addition it is neat in appearance and extremely accessible. The first Coventry firm to announce the inclusion of this engine as standard are the Coventry Mascot Cycle Co., of 49, Gresham Street, their new 3 h.p. model being specially constructed for the Barr and Stroud engine. Except for a very stout divided down tube, which allows the exhaust pipe to pass direct to the silencer without unnecessary bends, there is nothing unusual about the frame construction; the lines, however, are good, and the saddle is well in front of the rear wheel. A Burman two-speed gear, with clutch and kick-starter, is fitted to the bottom bracket, the drive being by chain and ⅞in. belt. Maplestone forks are fitted, and both front and rear brakes are of the Webb internal expanding type, and particularly smooth in action. Both guards are wide and domed, and in addition to valances a sensible splash guard is fitted in front. All the detail work is good, the driving chain is partially enclosed, the front number plate is fitted with licence card holder, the tank has a slightly rounded top, and glass top filler caps are standard. With 26in.×2¼in. tyres, the Coventry Mascot is listed at £80.

On the road we found the engine smooth, powerful, and silent, the Vici carburetter (fitted as standard) giving good acceleration and slow running, while the riding position was comfortable. There is an entire absence of rattle, and the whole machine is thoroughly well turned out.



Fitted with a 350 c.c. Barr & Stroud sleeve valve engine and Burman two-speed gear, the Coventry Mascot, a new comer in the motor cycle field, makes a sound and pleasing-looking mount.

# MOTOR CYCLES AT ALL PRICES.

## Guide to the Present-day Value of Second-hand Machines, as Indicated by the Classified Advertisements in "The Motor Cycle."

## SOUTH AFRICAN ROAD CONDITIONS.

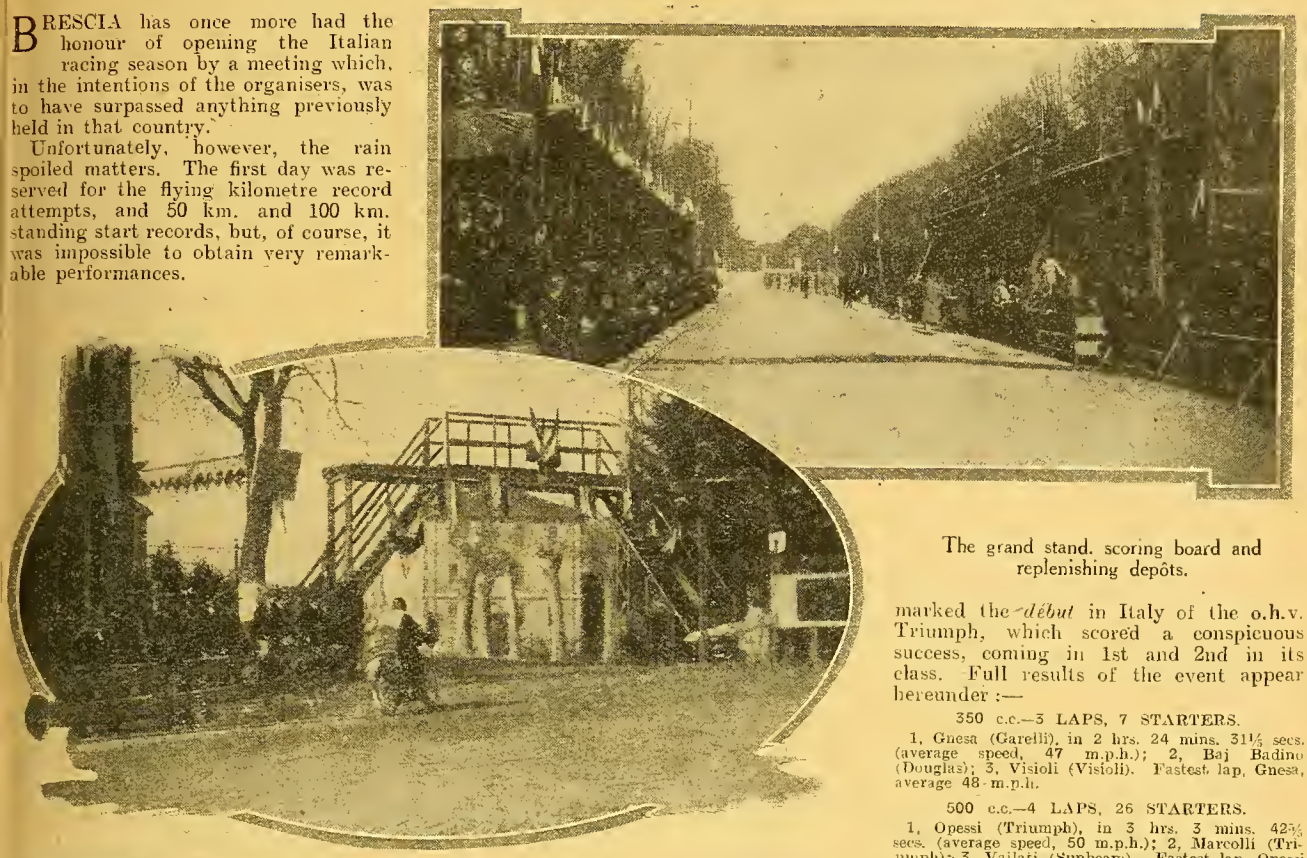
BY continually reiterating the faults and shortcomings of any particular thing, the virtues, no matter how desirable, are apt to be overlooked. In dwelling on the topic of bad road conditions overseas, for instance, it is quite easy to take for granted the fact that excellent roads do exist; and in the interest of motor cyclists generally we have laid special stress upon the need for good ground clearance and heavy tyres, knowing how essential these points are when negotiating the outlying roads of such countries as South Africa and Australia. *The Motor Weekly* of South Africa, however, thinks that a misleading impression as to the roads in South Africa was given in the notes we published on Mr. J. L. Norton's 3,039 mile tour in that country by the stress and importance that was made of the bad road conditions. But it must be remembered that there are two points of view on the subject. We have, as a technical journal, always endeavoured to foster for overseas work the type of machine that would be suitable for *all* conditions, and a motor cycle capable of performing well over the bad routes is more desirable than one which can traverse good roads only, and it is only by continually drawing the attention of makers to the road difficulties met with overseas that improvements continue to be made. It must be remembered, too, that Mr. Norton would be most impressed by, and naturally lay most stress on, features that were not in common with the riding conditions familiar to him in Great Britain. "In justice to our country," *The Motor Weekly* writes, "it should be stated that Mr. Norton made his tour during the rainy season, after several exceptionally heavy storms had been experienced, and the roads at the time were in no state for comparison with those of other countries. Under average conditions, however, the roads are very passable, and some of the main roads leave nothing to be desired. In view of the fact that South Africa is known to be a dry country subject to tropical rains, it is obvious that the conditions under which Mr. Norton and his machine were photographed are exceptional, and the photographs are not by any means a portrayal of typical scenes on the veld."

# FIRST 1922 ITALIAN ROAD RACE.

## Success of 500 c.c. British Machines in the Circuit di Brescia.

BRESCIA has once more had the honour of opening the Italian racing season by a meeting which, in the intentions of the organisers, was to have surpassed anything previously held in that country.

Unfortunately, however, the rain spoiled matters. The first day was reserved for the flying kilometre record attempts, and 50 km. and 100 km. standing start records, but, of course, it was impossible to obtain very remarkable performances.



A competitor at one of the several corners on the course. Observe the barricading and improvised footbridge.

The grand stand, scoring board and replenishing depôts.

The following times, however, are worth recording, considering the conditions under which they were accomplished:

Malvisi (1,000 c.c. 8-valve Harley-Davidson) covered the kilometre both ways at an average speed of 97.3 m.p.h. (23sec.). Rogai, on a 1,000 c.c. Harley-Davidson sc., covered the flying kilometre both ways at an average speed of 73.6 m.p.h. (30 2-5sec.); and Della Ferrera, on a new 350 c.c. twin of his own manufacture, at an average speed of 71.48 m.p.h. (31 3-10sec.), also beating the previous Italian record.

### Racing on Wet Roads.

The second day saw the running-off of the road race proper, over the usual circuit of 62 kilometres (38½ miles), and though the weather was clearer the roads were still in a very bad state. This event marked the *début* in Italy of the o.h.v. Triumph, which scored a conspicuous success, coming in 1st and 2nd in its class. Full results of the event appear hereunder:—

350 c.c.—3 LAPS, 7 STARTERS.

1, Gnesa (Garelli), in 2 hrs. 24 mins. 31½ secs. (average speed, 47 m.p.h.); 2, Baj Badino (Douglas); 3, Visioli (Visioli). Fastest lap, Gnesa, average 48 m.p.h.

500 c.c.—4 LAPS, 26 STARTERS.

1, Opessi (Triumph), in 3 hrs. 3 mins. 42⅘ secs. (average speed, 50 m.p.h.); 2, Marcolli (Triumph); 3, Vailati (Sunbeam). Fastest lap, Opessi (Triumph), average speed, 51.3 m.p.h.

750 c.c.—3 LAPS, 4 STARTERS.

1, Rava (Indian), in 2 hrs. 37 min. 28⅕ secs. (average speed, 44 m.p.h.).

1,000 c.c.—4 LAPS, 11 STARTERS.

1, Rogai (Harley-D.), in 2 hrs. 38 mins. 47⅕ secs. (average speed, 57 m.p.h.); 2, Wingler (Harley-D.); 3, Paraglia (Harley-D.).

Here the Harley-Davidsons "wiped the board," all the six finishers riding these machines, and the fastest lap being accomplished by Malvisi at an average speed of 60 m.p.h. The sidecar class was also won by a Harley-Davidson.

## RESULTS OF GLASGOW HOLIDAY TRIAL.

ONLY four competitors lost no marks in the two-day holiday trial of the Western M.C.C., described in *The Motor Cycle* of the 20th ult.

Gold medals have therefore been awarded to:—

R. M. Wilson (2¾ A.J.S.), D. Wright (3½ Sunbeam), G. H. Wilson (2¾ Edmund-B. and S.), G. Grinton (7-9 Harley-D. sc.).

The principal trophy winners were:—

Hutchinson Trophy. Best Solo Performance.—G. H. Wilson (2¾ Edmund-B. and S.).

A.J.S. Trophy. Best Sidecar Performance.—G. Grinton (7-9 Harley-D. sc.).

Agents' Team Prize. Bell Bros. Team.—D. Bell (2¾ A.J.S. sc.), R. Wilson (2¾ A.J.S.), R. B. Brown (7 A.J.S. sc.). Total loss, 12 marks.

Best Performance by Private Owner Club Member (Solo).—D. Wright (3½ Sunbeam).

Best Performance by Private Owner Club Member (Sidecar).—R. B. Brown (7 A.J.S. sc.).

SILVER MEDALS.

J. W. Morton (3½ Douglas), T. Morton (3½ Norton), D. Bell (2¾ A.J.S. sc.), R. B. Brown (7 A.J.S. sc.), J. W. Burton (7-9 Harley-D. sc.), G. A. Mann) (6 A.J.S. sc.), G. F. Ball (7 A.J.S.).

BRONZE MEDALS.

J. M. Cowan (3½ Martinsyde), R. H. Lochhead (3½ Ariel), C. M'Allister (2¾ Francis-Barnett), R. Watson (6 Martinsyde sc.), A. Downie (6 Raleigh sc.).

## CHAIN LUBRICATION.

SOME very useful hints regarding chain lubrication are contained in a booklet recently issued by Brampton Bros., Ltd. In the opinion of the author the only satisfactory method is to remove the chain periodically, place it in a bath of paraffin, petrol, or benzole, changing the liquid from time to time, until the chain is clean. It should then be dried and placed in a bath of lubricant (any good grease or graphite preparation) at melting, not boiling, point, and allowed to remain until cool. This procedure should be repeated every 500 to 1,000 miles. There is a fund of other useful information, and numerous valuable hints in the booklet, of which every owner of a chain-driven motor cycle should possess a copy.

# Road Tests of New Models

The 243 c.c. Calthorpe Two-stroke.

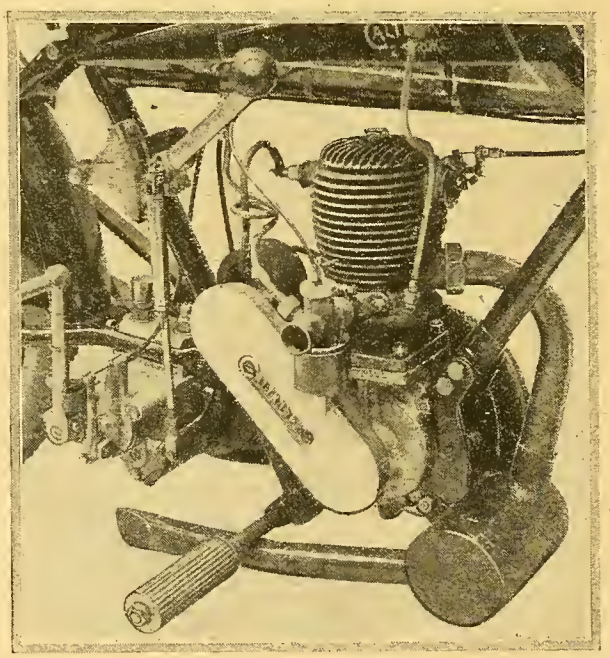
*SPECIFICATION.*

*ENGINE: Two-stroke, 67 × 69 mm. = 243 c.c.*
*GEAR: Two-speed, Albion clutch and K.S.*
*TRANSMISSION: Chain and ¾in. belt.*
*TYRES: 24 × 2¼.*
*CARBURETTER: Mills, single lever.*
*FORKS: Druid.*
*PRICE: £47.*

IT is no exaggeration to say that nearly half those who ride motor cycles and those who hope to ride in the near future are chiefly interested in the small machine selling at a low price. There are very many people who at present cover their journeys on a pedal cycle who would like to extend their range of action and avoid the exertion necessary with this form of transport, and in addition there is an army of young people, both boys and girls, who require a small machine, at any rate until they have graduated to something larger. To all these and to many others the little Calthorpe will make a strong appeal. Emphasis has been laid on the small size of the machine, but it must not be imagined that it is too small for the average man. Indeed, the writer who is well over the average height stowed himself away quite comfortably and at no time felt cramped.

### For Everyday Riders.

On a machine which is frankly intended to appeal to the multitude rather than to the exclusively sporting element, simplicity and ease of control is of the utmost importance, and in these particulars the motor cycle under consideration excels. Including even machines which sell at high prices, we have never handled one which steered better; true, the maximum speed does not greatly exceed thirty to thirty-five miles an hour, but so perfect is the steering that it is possible to control the little mount "hands off," even in ordinary traffic.



Power unit of the 243 c.c. Calthorpe. Oil is fed directly to the cylinder walls and the magneto is in a well protected position.

In addition to the controllability of the machine, the port setting of the engine is such that in conjunction with the Mills carburetter, the engine will two-stroke down to the very lowest speeds. Even with the gear lever in neutral and the throttle all but closed, two-stroking is maintained, and with the low gear engaged one can walk beside the machine at an ordinary pace while the engine runs perfectly regularly. First impressions give one the idea that the machine is

**Road Tests of New Models.—**

less powerful than is really the case; this is probably due to the even torque and good balance, for in actual practice the little engine carried us comfortably over a gradient of 1-9 on top gear.

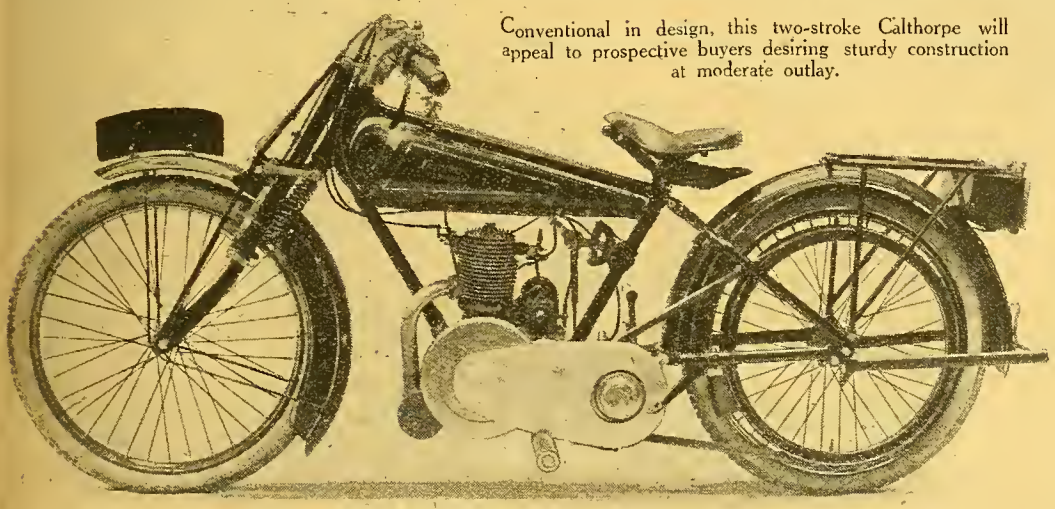
### Little to Criticise.

Few machines, especially in the more moderately priced class, are perfect, but our criticisms of the Calthorpe refer to details only. First, the saddle is too small for comfort, a matter which can be rectified by the purchaser at a small extra outlay. Secondly, there is a tendency to flywheel ring, due probably to the neat cast aluminium chain cover which protects the primary chain. It should be mentioned, in parenthesis, that this chain lies outside the flywheel and is consequently particularly easy of access. The last point, and one which the manufacturers are intending to modify, is that there are a number of comparatively awkwardly placed clip joints on the handle-bar which are apt to render clutch control a little uncomfortable.

### Oiling System, Brakework and Fittings.

With regard to mechanical features, one finds the magneto well placed behind the cylinder, and an admirable lubrication system which is confined to this make of engine. Oil is fed through a Best and Lloyd sight feed drip to a ring surrounding the cylinder. From this ring a series of small holes passes through the cylinder wall, and thus the piston is lubricated directly and not by splash only.

A simple internal V rear brake is operated by a pedal projecting forward from the pivoting point of the shoe—this arrangement is effective and obviates joints, rods, and toggles. The front brake is of the normal horseshoe type. A single armoured tool bag is mounted at the rear of the carrier, and the frame is low, having a sloping top tube, the saddle position being so low that even the shortest rider has a feeling of security.



Conventional in design, this two-stroke Calthorpe will appeal to prospective buyers desiring sturdy construction at moderate outlay.

### Other Models.

Similar in all respects except as regards transmission, there are two other Calthorpe models employing the same engine. One model has a two-speed gear without clutch or kick-starter, and a single-geared machine is listed at £36.

---

# FOR NAVAL OFFICERS.

## Details of the Two-Day Trial for the Arbuthnot Trophy.

OPEN to officers on the active lists of the Royal Navy, Royal Marines, R.N.R., and R.N.V.R., the trial for the fine trophy in memory of the late Rr.-Adm. Sir Robert K. Arbuthnot, R.N., will take place on June 30th and July 1st.

Reigate has been chosen as the starting and finishing point, and the competitors will cover one circuit of about 45-50 miles east of Reigate for the first section and about the same distance over a circuit west of that town for the second section of the day's run. The start is to be at 2 p.m. On the following day the same circuits will be covered in the same order but in the reverse direction, and a start will be made at 9 a.m., so that the event may finish about 3 p.m.

These routes will include some of the best known Surrey and Kentish test hills, but there will be nothing freakish in the course, and no roads of excessive roughness likely to damage competing machines.

Each circuit is to be considered as a non-stop section, and competitors will be required to furnish a full report of all stops, adjustments, and replenishments at the conclusion of each day's run.

### Regulations to Suit Circumstances.

Owing to the fact that this trial is unique, its conditions differ materially from those of the ordinary reliability trial. Being well aware of the difficulty which officers experience in obtaining leave exactly when desired, the organisers have arranged for the competition to start at 2 p.m., on Friday, and entries will be received until within two hours of the start; intending competitors are requested, however, to acquaint the Auto Cycle Union, 83, Pall Mall, London, S.W.1, of their desire to enter as early as possible.

Previous winners of the Trophy have been: 1919, Lt. E. S. K. Evans-Greaves, R.N.; 1920, Lt. G. P. Glen Kidston, R.N.; and in 1921 the Trophy was jointly awarded to Lt. T. H. Back, R.N., Sub-Lt H. C. Chads, R.N., Lt. E. V. James, R.N., and Lt. C. Plumer, R.N.

# CLUB NEWS

### North Western Centre A.C.U.

In addition to spectators' mounts, there were 125 machines at the Raweliffe Hall Rally in the count for the Motor Agents' Cup for the best attendance, calculated on a figure of merit. Chief results :—

| | | Fig. of merit. |
|---|---|---|
| 1. | Colne and District M.C.C | 2450 |
| 2. | Southport M.C. ... ... | 2217 |
| 3. | Accrington M.C.C. ... ... | 1368 |

### Lee, Lewisham, and District M.C. and L.C.C.

Results of Hopwood Cup Reliability Trial, held over a difficult course of approximately 84 miles, have been issued as follow :—

UNDER 350 c.c. SOLO.—G. W. Manger (2¾ P.V.), gold medal.
OVER 350 c.c. SOLO.—N. Gibbs (4 Douglas), gold medal.
600 c.c. SIDECARS.—W. A. Sweet (7-9 Harley-Davidson sc.), Hopwood Cup and gold medal.

The hon. secretary, Mr. H. W. Allen, of 23 Boone's Street, Lee, S.E.13, will be pleased to receive applications for membership.

### West Birmingham M.C.C.

On the 22nd ult. the club held a sporting hill-climb at Hopton Bank, near Cleobury Mortimer. The first portion of the hill, a distance of half a mile, was chosen, and the results, which were judged on time only, are as follows :—

FASTEST TIME OF THE DAY.—R. G. Smith (3½ Sunbeam), 41⅘s., special award.
UNDER 350 c.c.—W. C. Shelton (2¾ Douglas), 1m. 5⅘s.
UNDER 500 c.c.—R. G. Smith (3½ Sunbeam), 42⅕s.
UNLIMITED.—R. G. Smith (3½ Sunbeam), 41⅗s.
SIDECARS.—S. Brand (Indian), 1m. 6⅕s.

It has been decided to award silver cups instead of medals.

### Kilmarnock and District M.C.C.

As an initial venture, a reliability trial will be held on May 6th, starting at 2 p.m., the course being approximately 75 miles.

### Buluwayo M.C.C.

Motor cyclists of Buluwayo recently met with a view to forming a club. They congregated at Queen's Road, and a dozen of them took part in a flying half-mile speed trial, the fastest time being 35s.

### Knock M.C.C. (Belfast).

W. R. Boyd (2½ Allon) and B. Boyd (New Imperial) were respectively first and second of the "hounds" in a recent exciting paper chase, but none succeeded in catching up the "hares," G. W. Fitchie (Verus) and a car driver.

### Ipswich and District M.C.C. and Norfolk M.C.C.

Results of the very well-supported inter-club reliability trial on Good Friday have now been announced, as follows :—

SOLO MACHINES NOT EXCEEDING 350 c.c.—W. J. Coe, Ipswich (Velocette); G. Turner, Ipswich (A.J.S.); L. Sharpe, Ipswich (A.J.S.).
SOLO MACHINES NOT EXCEEDING 500 c.c.—P. Sherwood, Norfolk (Triumph); R. W. Fison, Ipswich (Norton); L. G. Baker, Norfolk (P. and M.).
SOLO MACHINES NOT EXCEEDING 750 c.c.—A. Blake, Norfolk (Norton); R. A. Daniels, Norfolk (Norton); M. F. Horlock, Ipswich (Zenith).
UNLIMITED SOLO MACHINES.—G. H. Gowing, Norfolk (Sunbeam); E. C. Rose, Ipswich (N.U.T.); J. Pretty, Ipswich (Triumph).
600 c.c. SIDECAR MACHINES.—C. D. Rose, Ipswich (B.S.A.); H. Chapman, Norfolk (Triumph); A. F. Bagshaw, Norfolk (Triumph).
UNLIMITED SIDECAR MACHINES.—E. C. Lunniss, Ipswich (Sunbeam); H. O. Goldsmith, Ipswich (Brough); H. D. Wheeler, Norfolk (New Imperial).

Ipswich thus won three firsts, four seconds, and three thirds, and secured the trophy.

### Sale and District M.C.C.

Formed only a month ago the club has already a membership of sixty, all enthusiasts, it is claimed. Headquarters are at the Sale Hotel.

### Wallington District M.C. and L.C.C.

Succumbs Hill and its atrocious surface accounted for no less than nine competitors in the President's Cup Trial, but Allan Gruzelier (3½ Zenith-Bradshaw), Reg. Green (3½ Norton), R. F. Alderton (3½ Norton), J. C. Sanford (5 Rover sc.), E. W. Lanfear (4 Triumph), made very excellent climbs. The fact that only five out of the 28 survived to collect awards alone proves the strenuous nature of the course.

WINNER OF THE CUP.—R. F. Alderton (3½ Norton).
GOLD MEDALS.—E. W. Lanfear (4 Triumph), J. C. Sanford (5 Rover sc.).
SILVER MEDALS.—E. C. Gordon (3½ Norton), H. E. K. Sawtell (10 Morgan).

### North London M.C.C.

Arrangements are now well in hand for the Second London Rally, to be held at the London Aerodrome, Hendon, on Whit Monday, June 5th. Apart from the Challenge Shield (presented by the captain of the North London M.C.C.), which is being competed for by clubs from various parts of the country, there will be a great deal to interest the unattached motor cyclist in the form of novel competitions, for which many prizes are to be won. Efforts are being made for the actual machines which win the Junior and Senior T.T. Races to be on view, but in any case many late models of new and uneconventional mounts will be on exhibition. Fuller details are obtainable from the hon. Rally Organiser, Mr. Alan W. Day, "Claremont," Ballards Lane, Finchley, N.3.

### Clevedon and District M.C.

With headquarters at The Royal Pier otel, Clevedon, the club, which has ly recently been formed, is affiliated the Western Centre A.C.U. The subription is 7s. 6d. per annum. Lt.-Col. r Chas. Miles, Bart., is president, and r. R. E. Merrifield, 24, Old Church oad, Clevedon, is secretary.

### Surrey M.C. and L.C.C.

Over the standard course, from Guildrd to Arundel, with finish at Hindead the first team-trial of the year took lace on the 22nd ult. Results :—

| | Marks lost. |
|---|---|
| Farnborough B. Team: H. C. Mansell (A.J.S.), P. W. S. Bulman (Zenith sc.), Miss Bewers (Triumph sc.) ... ... | 0 |
| Farnham A Team: P. T. Mitchell (G.N.), S. W. Mansell (Rover), T. Broadhurst (Sunbeam) ... ... ... | 0 |
| Holmwood Team: F. P. Verney (Triumph), F. Verney Jun. (Triumph Junior), C. C. Verney (Rover Eight) ... ... | 6 |

* Tied.

### Bradford M.C. and L.C.C.

It is estimated that some 5,000 people witnesesd the Rosedale Abbey Bank reak hill climb on the 23rd ult., and his despite a heavy hailstorm. Results :—

SIDECAR CLASS.—1, G. M. Townshend (4½ and M. sc); 2, Master T. Bullus (4¼ P. and . sc.).

SOLO CLASS.—1, W. Hodgson (3½ Snobeam); , H. S. Moorhouse (3½ Triumph); 3, J. H. impson (3¾ Scott); after a tie between these hree riders.

The winner in this class is awarded he Fell Cup outright.

### Isle of Wight M.C. and L.C.C.

On Easter Monday the club carried out very successful reliability trial. The ourse was, roughly, a 53-mile circuit of he island, and included two observed ills, Cowlease and Brighstone, which, owever, most of the competitors made ight of. Over an enjoyable tea at the Wheatsheaf Hotel, the President, Dr. E. F. W. Buckell, read out the results :

A. G. Smith (3½ Lea-Francis) was first with a loss of only 5 marks, and G. W. J. Marvin (4 Douglas), second, 7 marks. Other good performances were made by E. T. Witham (3½ Abingdon K.D.) and G. Mansbridge (2¼ James).

## Week-End Club Events.

*May 6th.—Birmingham M.C.C.—Half Day Sporting Trial.*
*May 6th.—Kilmarnock and District M.C.C.—Open Reliability Trial.*
*May 6th.—North West London M.C.—Optional Route Competition.*
*May 6th.—Loughborough and District M.C.C.—Hill Climb at Beacon.*
*May 6th.—Dumfries and District M.C. and C.C.—Minor Reliability Trial.*
*May 6th.—Coatbridge, Airdrie and District M.C. and G.C.—Flying Half Mile (Open).*
*May 6th.—Liverpool M.C.—Hill Climb.*
*May 6th.—Gloucester M.C. and L.C.C.—Reliability Trial.*
*May 6th.—Kidderminster M.C.C.—Petrol Consumption Trial.*
*May 6th.—Coventry Triangle M.C.—Run to Princethorpe.*
*May 6th.—Sheffield M.C.C.—Picnic.*
*May 6th.—Coventry and Warwickshire M.C.—President's Run.*
*May 6th.—West Birmingham M.C.C.—Half Day Reliability Trial for the Riley Cup.*
*May 7th.—East London M.C.C.—Solo Hill Climb.*
*May 7th.—Sheffield M.C.C.—Run to Handforth, Cheshire.*
*May 7th.—Coventry Triangle M.C.—Run to Ratby Woods.*
*May 7th.—Barrow and District M.C.C.—Meet W.M.C.C. at Blea Tarn.*
*May 7th.—Eastbourne and District M.C.C.—Reliability Trial "Blakemarsh" and "Doull" Cups.*
*May 7th.—Ilkley M.C. and L.C.C.—Social Event.*
*May 7th.—West Kent M.C. Social Run*
*May 7th.—Southampton M.C.C.—Run to Shapwick.*
*May 7th.—Colne and District M.C. Run to Ilkley.*
*May 7th.—Ashford M.C. and L.C.C.—Meet at Margate.*
*May 9th.—Colne and District M.C.—Sporting Event.*
*May 10th.—Surbiton M.C.—Social Event.*
*May 10th.—Eastbourne and District M.C.C.—Run to Brighton.*
*May 10th.—Ashford M.C. and L.C.C.—Event.*
*May 11th.—North Wales M.C.C.—Fast and Slow Hill Climb.*
*May 11th.—Gloucester M.C. and L.C.C.—Visit to Douglas Motor Works, Bristol.*

### Birmingham M.C.C.

All helpers in the Victory Trial are thanked by the club for their assistance. In most cases this has already been done by post, but some may have been neglected.

### Essex County and Southend A.C.

Motor cyclists were successful in beating the car drivers in a recent handicap knock-out hill climb. Results :—

1, F. C. Pead (2¾ Edmund); 2, Miss Freeman (2¾ Coulson).

### Redditch and District M.C.C.

On Saturday, the 20th inst., the club will hold a trial open to members of the Midland Centre A.C.U. The award list includes the Terry (40 guinea), and President's (30 guinea) Cups.

### Woolwich, Plumstead, and District M.C.C.

Starting from the Three Horse Shoes Hotel, Knockholt, on a three-circuit course, totalling about 100 miles, the fourth inter-team trial for the cup presented by the promoting club will be held on the 13th inst. Entries, which are limited to teams from S.E. Centre A.C.U. clubs, close on Saturday.

### Stafford and District M.C.C.

Awards in connection with the club's most recent trial (re-run) were as follows :—

CLUB GOLD MEDAL FOR BEST SOLO PERFORMANCE.—J. Worthington (2½ Sun-Vitesse). Worthington, after apparently losing all chance by a failure on the flexibility test, pluckily kept to the course, and was rewarded by being the only club member to complete the trial on a solo machine.

CLUB GOLD MEDAL FOR BEST SIDECAR PERFORMANCE.—E. H. Bunn (8 Royal Ruby sc.).

PRIZE FOR BEST PERFORMANCE BY NON-MEMBER.—W. E. Hill (2¾ H.B.).

### Heaton Moor M.C.C.

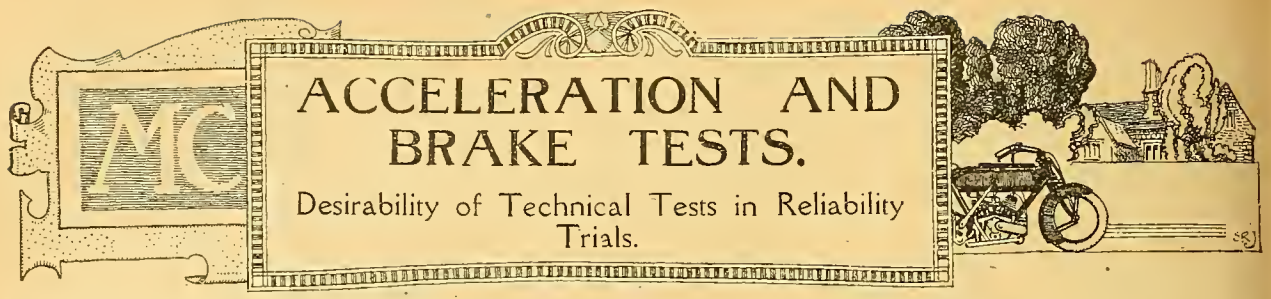
After some confusion at a first attempt to run a reliability trial this year owing to another club using the same blue dye for route-marking, a successful re-run event was held on the 23rd ult., lime-green being used on doubtful corners. The results have now been announced, as follows :—

500 c.c.—1, F. Slack (3½ Sunbeam), 9 marks lost, gold medal and special prize; 2, H. Cheetham (3½ Rover), 11 marks lost, silver medal.

350 c.c.—J. Beonet (2¾ Verus), special prize.

SIDECAR.—1, H. Moore (8 Royal Ruby sc.), 11 marks lost, silver medal and sidecar prize.

A MEET OF EAST ANGLIAN MOTOR CYCLISTS. The gathering of competitors at Hintlesham previous to the recent Ipswich and District and Norfolk M.C. and L.C.C.'s inter-club reliability trial.



# ACCELERATION AND BRAKE TESTS.

## Desirability of Technical Tests in Reliability Trials.

IT is desirable to include in a modern reliability trial tests to measure the ability of the machine to pick up speed, and also the efficiency of the brakes. The tests used by some clubs to determine these factors are far from satisfactory.

Brake tests as usually carried out simply consist of stopping the competitor on a hill and measuring the distance covered in coming to rest. This is no test at all, as everything depends on the speed of the competitor, and although one competitor may be caught by surprise, those following have generally time to reduce their speed. Even if every competitor is surprised at the same speed, the distance covered in coming to rest is no direct criterion of the retardation which is the important quantity to be measured. The following method gives a simple means of determining both the acceleration and retardation accurately. It may be carried out either at the start or at some stop during the trial.

### The Suggested Combined Test.

The competitors are started from a line marked A on the road (which should be of good surface and level). They are told to ride as fast as possible to a point B, also marked on the road, and then stop as quickly as possible. They are timed by means of a stop-watch from A to B, and the distance they are coming to rest, Y, is measured. Let T = time of acceleration, and X the distance from A to B (previously measured), then average velocity during time $T = \frac{X}{T}$.

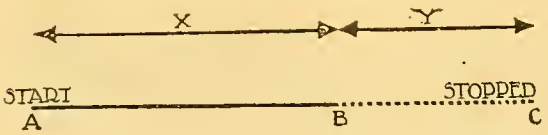


Diagram illustrating the writer's ideas on brake tests.

Since the machines start from rest, and the acceleration may be assumed uniform, the maximum velocity at B will be $\frac{2X}{T}$. The rate of increase of velocity or acceleration during T will be $\frac{2X}{T \times T} = \frac{2X}{T^2}$.

If the distance X is in feet, and T in seconds, the result will be acceleration in feet per second per second.

The distance covered in stopping is Y.

The formula of motion is $V^2 = 2fs$, where V is final velocity, $f$ is acceleration, and $s$ space covered. When $f$ is negative or retardation, V is the initial velocity, but initial velocity of braking period is equal to final velocity of accelerating period, and Y = S,

$$V = \frac{2X}{T}. \qquad \therefore \left(\frac{2X}{T}\right)^2 = 2fY;$$

or

$$\text{retardation} = \frac{2X^2}{T^2Y}.$$

The retardation will also be in feet per second per second. In reliability trials, it is desirable to award ten marks each to acceleration and braking, calling the best performance ten and expressing the other performances to the nearest 10 per cent.

### Personal Element Largely Eliminated.

A distance of 50 yards is suitable for X, as machines can attain a speed of 25 m.p.h., at which braking is reasonably difficult. The formula has one very desirable aspect. There is no opening for trickery. If the rider delays in getting away or cuts out before the point B it spoils his acceleration figure without improving his braking figure to any extent, as the following figures show.

EXAMPLE.

| Remarks. | T. | Y. | Ft. per sec. per sec. | | Acceleration. | Brake. |
|---|---|---|---|---|---|---|
| | | | Acceleration. | Retardation. | | |
| | | | | | marks. | marks. |
| Best Performance | 8·1 | 36 | 4·58 | 19·1 | 10 | 10 |
| | 10 | 24 | 3 | 18·7 | 6½ | 10 |
| Skidded Wheel | 8·8 | 84 | 3·88 | 6·9 | 8½ | 3½ |
| Cut out before reaching B ... | 14 | 42 | 1·54 | 4 | 3½ | 3 |
| Missed Brake Pedal ... ... | 12·6 | 120 | 1·88 | 2·35 | 4 | 0 |

Generally speaking, competitors would start with warm engines, but if held after a tea stop with cold engines, the acceleration figure could be used as a starting from cold test. To encourage clean riding it is sometimes desirable to include these rules :—

(*a*) Riders skidding round will have their performance halved.

(*b*) Riders falling off in the brake test will lose 10 marks.

(*c*) Competitors cutting out before end of acceleration are disqualified.

The lines at A and B should be marked with white distemper. The quickest method of measuring Y is to mark out on both sides of the road the number of feet from B. Two observers stretch a string in front of the machine after it has stopped, and thus get Y to the nearest foot.

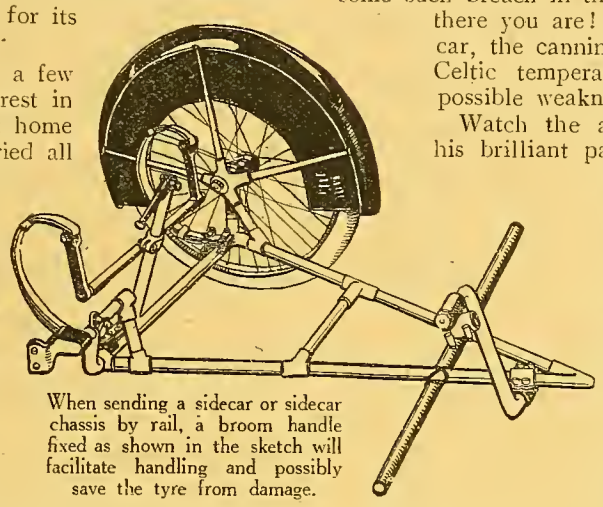
M. JENNISON, A.M.I.E.E.

# HANDLING SIDECARS.

## Unusual Hints and Observations on the Management of Sidecar Attachments.

THERE are several wrong ways of wheeling a detached sidecar, but some are worse than others; indeed, so far as I know, there is no really right way of wheeling a detached sidecar. If Billingsgate handled sidecars instead of herrings, a more or less correct method would doubtless have materialised; as things stand, the good old British railway porter, who can usually be depended upon for *the* way of conveniently handling unwieldy goods other than his own, sheds considerable light on the subject by showing us just how the sidecar should *not* be handled if due regard for its well-being is to be taken.

I watched two porters at it a few days ago, and having no interest in the victimised vehicle, I went home with hopes renewed. They tried all the worst ways, and finally stuck to the worst of all; for, having damaged several incidental goods during their initial efforts, including an unhappy bull-terrier—unhappy because he was muzzled—the brighter of them hit upon the idea of dragging the sidecar forcibly against the grain—that is, broadside on, the wheel scraping the concrete in semi-circles. At the tail-end of the procession two more wiry ex-soldiers were conveying the motor cycle which had run in happy unison. The gear lever had been knocked into engagement, and these sons of British toil knew nothing about exhaust valve lifters. So, chiefly by the force of blasphemous effort, the machine proceeded with the rear wheel locked, leaving a trail of Dunlop all along the fairway.



When sending a sidecar or sidecar chassis by rail, a broom handle fixed as shown in the sketch will facilitate handling and possibly save the tyre from damage.

### When Sending by Rail.

There is a moral to this. When sending a sidecar by rail, attach a broom handle under the chassis at the for'ard end This protects the vehicle, and gives porters two handles of inspiration. A couple of men can then easily wheel the machine, the one on the right holding the chain-stay coupling and his end of the broom handle, the other (quite unnecessary, but he is sure to be hovering about, so you might as well keep him out of mischief) steadying the vehicle by holding the other end of the handle. Further, when sending a motor cycle by train, remove the rear chain. It is also a good plan to bind the handle-bar controls flush with the bars.

### Wheeling a Detached Sidecar.

One of the least difficult ways in which to wheel a detached sidecar is to hold the chain-stay connection in the left hand and the steering-head connection in the right. Keep the chassis as level as possible, and steer by moving the front end. If any up grades have to be negotiated, it is as well to adorn oneself in shin-guards and wicket-keeping pads. A shrapnel helmet is necessary only for severe down grades, but it is better to hire a hand cart.

### Recollection and Re-connection.

I seem to recall having written a good deal on the subject of sidecar alignment and other giddy whirls of our gay youth. I suppose such literary efforts were the result of Matilda casting adrift, or some such breach in the couplings of life. Anyway, there you are! To-day, when I ride a sidecar, the canniness of accumulated years of a Celtic temperament carefully check all its possible weaknesses.

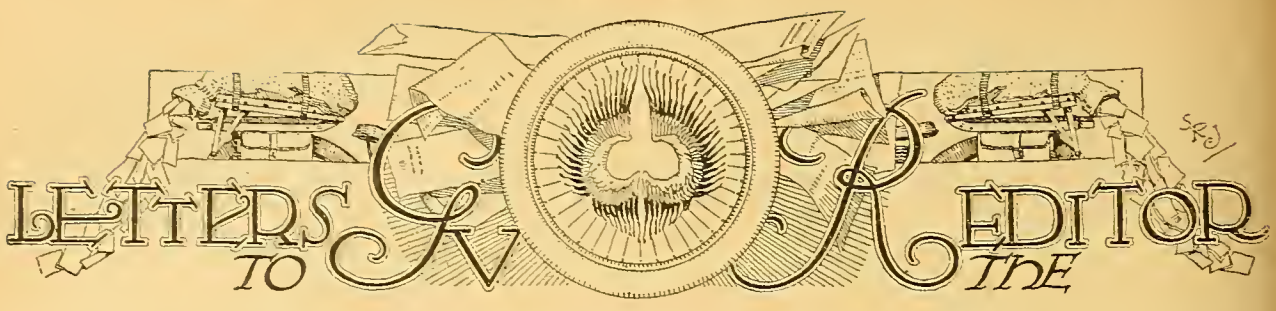
Watch the average garage mechanic and his brilliant partner in crime, the boy, who fills up the two-strokes, sticking a motor cycle and sidecar together. The main points of connection are made, and the united forces of the two, backed by a 4lb. hammer, soon bring the more reluctant couplings to within bolting distance. Some kind of check on the alignment is usually taken, and finally everything is pulled tightly up with the air of a stiff job well achieved.

Ride behind a sidecar travelling fast on a bad road, and you will obtain a fair idea as to the stresses it undergoes. Nor does it require much imagination for one to realise how tremendously these stresses are enhanced when the connections have been sprung forcibly together and rigidly fixed there! Moreover, a sidecar attached in this way is always a trouble to re-attach should it be removed, whereas if properly put up at first, there should be no further difficulty.

### Practical Advice on Connecting-up.

One of the best methods is as follows:—Presuming the outfit is standing on a hard, level floor, wangle your various connections till you get the correct alignment, then tighten everything as though for keeps. Now proceed to scotch both the motor cycle and the sidecar with blocks and strips of wood, placing them by the gentle persuasion of a light hammer under every corner of the chassis and under the footrests, so that the two rest irrespective of their connections. Now slacken every connection, and go round with the aforesaid light hammer as a railwayman tests his wheels. A tap here and there should relieve any tension there is, causing each connection to creep into its right place while the machine and the sidecar remain stationary. After a little experience this job takes only a minute or two, a few light taps with the hammer doing the trick, and so no unnecessary stresses exist when the final tightening takes place.

CHINOOK.



The Editor does not hold himself responsible for the opinions of his correspondents.

Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.

### *AN AMATEUR ASSOCIATION SUGGESTED.*

Sir,—As a prospective entrant in the Amateur Road Race, I read with considerable disappointment that the A.C.U. had refused a permit for this event.

By so doing, that autocratic body would appear to have signed its resignation as far as the control of the sport among private owners is concerned, and, to me, it seems that the obvious sequence should be the formation of a purely amateur association.

Are amateur motor cyclists less enthusiastic than amateur golfers or footballers? Unless they can muster the energy to organise their pastime on clean, businesslike lines, the answer must be in the affirmative, which I am sure is wrong.

What do fellow-readers think? R.I.C.-UMPH.

London, W.C.2.

### *BLACKLEADING CYLINDERS.*

Sir,—Regarding Mr. W. D. Edwards' letter, he would appear to have mistaken the point of the article by "E.N.J.," which was that the very idea of blackleading cylinders is to obtain a *black* and *not* a polished surface.

I might add that blackleading with ordinary blacklead gave excellent results on a B.S.A. which I used to have, and that it appears to work very well on the Rover "8" I now have. NIGER.

Salisbury.

Sir.—In reply to Mr. W. Edwards, I would like to say that the blackleading of the cylinder does materially assist cooling by radiation. I have seen an experiment conducted in which water cooled more rapidly in a blackened calorimeter, and I now quote from an authoritative text book:—"The rate at which heat is radiated depends upon the nature of the body's substance, thus a black surface radiates heat more rapidly than one not so treated." DUPE.

London, S.W.19.

### *ULTRA-RAPID TWINS.*

Sir,—While I agree with "Handlebar's" remarks in your issue of April 13th, I should like to point out that the original "Blue" Indians were racing models, built for speed, and while I should not expect 64 m.p.h. from a 1915 model with sidecar and passenger, I have a 1915 7 h.p. Indian that can touch over 60 solo, and will do 50 on a good road with sidecar.

It is true this machine has been kept carefully tuned, is fitted with a Binks carburetter and Bosch magneto, is run on Shell aviation, and has only two rings in each piston. I am constantly touring with heavy Gloria sidecar and child in pillion seat, and can take three and luggage up practically any hill in the Peak District.

Matlock. BLUE INDIAN.

Sir,—Replying to "Horley" re the speed of his machine. I own a 6 h.p. Enfield sidecar that can touch 65 m.p.h. loaded, by a "Stewart," and it has done something like 11,000 miles now. Only last Sunday on the Epping—Bishop's Stortford road, I had three up (weighing 32 stone, without weight of machine or car), and gave a solo rider on a 5 h.p. twin a nasty shock in both sprinting and long distance. He said afterwards "We were too good for him."

London. ENFIELD.

### *WITH A LIGHTWEIGHT SIDECAR OUTFIT.*

Sir,—I think I can go further than your correspondent Mr. Harold Wilson. I took possession of an "Ivy Three" outfit in May, 1921, and have covered on this outfit nearly 8,000 miles, with an outlay of 6 piston rings, 2 plugs, and 2 sets of heavy Dunlop tyres, plus oil and petrol.

ERNEST HEWKIN.

### *H.P. RATINGS AND INSURANCE.*

Sir,—In a recent issue the suggestion was recorded that the rating of motor cycles should be altered so as to make 100 c.c. equal to 1 h.p.

Whilst agreeing with the suggestion, I think the question of insurance has evidently been overlooked, and if the idea was put into force it would not benefit all motor cyclists unless the insurance "horse-powers" were altered likewise.

As an example, the 4 h.p. Harley-Davidson is 584 c.c. At present it can be insured under the "not exceeding 4 h.p." scale. Under the suggested new rating it would have to be placed under the "not exceeding 10 h.p." scale!

Olton. IVY THREE.

### *GOOD TYRE MILEAGE ON A TRIUMPH.*

Sir,—Your correspondent "Brundall-Buster" refers to the above question, and I am giving the most accurate details I can at the moment, as my records are not at hand.

I did not mean to convey that the whole 12,000 miles had been covered on the original tyres. The following details may be of interest:—

*Make and Size.*—Dunlop 26in. × 2¼in. (to fit 2¼in. rims). Front wheel and sidecar, "Heavy"; rear wheel, "Extra Heavy."

*Distances.*—Rear wheel: About 9,000 miles. Front wheel: Up to date this cover has done 14,000 miles, and is now on the sidecar. Sidecar: This cover was changed on to the rear wheel, and then on to the front wheel. It has just been scrapped; total life, about 7,000 miles or more.

I think that the results are most satisfactory, and show how good modern tyres can be, and that chain drive is no disadvantage from the point of view of tyre wear, if an effective "cushion" is incorporated in the transmission.

I have never had such good results from motor cycle or car tyres since 1906. C. H. STEPHENSON.

### *CLIMBING QUAY STEPS.*

Sir,—I see in "T.T. Notes and News" that there is a probability of a crane not being available at Douglas this year for the landing of machines.

Should this be the case, motor cyclists will find that if they adopt the method I have used, carrying the heaviest solo machine up the steps is a very easy and simple matter. All that is required are two lengths of wood, or in preference steel tube, about 2ft. each, these being passed through the two wheels, the front one to be at the *back* of the forks, and the rear one to be up solid also *behind* carrier down tube. When carrying machines down steps to the boat, place the bars through the wheels in *front* of forks and carrier stays. On the T.T. boats there is always assistance available. Machines carried in this manner cannot by any chance be damaged, provided strong enough bars or tubes are used. (Capt.) A. E. BEARD.

### FROM A MECHANICAL ENGINEERING VIEWPOINT.

Sir,—About July last year I commented upon the lack of any worthy attempt being made at designing a two-stroke lightweight machine from a mechanical engineering point of view.

Without wishing to labour the point, or appear prejudiced in the interest of any particular firm (I am not in the trade myself), permit me to point out that the Poppe and Packman machine illustrated in the issue of April 20th, from the description given, is certainly a better attempt at designing a two-stroke machine than the majority on the market at the present time. DRAUGHTSMAN.

Manchester.

### 50 MILES PER WEEK WITH A BABY TWO-STROKE.

Sir,—I took delivery of a Junior Triumph in July, 1920. I have not had a road stop excepting once last year for a burst in the front tyre; in fact, the machine has never required any attention at all, save a chain adjustment and belt shortening at a garage about a month after purchase, and decarbonisation of cylinder at intervals of about six months since. Otherwise it has not been touched, nor have the tool bags been opened.

The same belt is still running, and is only just being shortened for the second time in its history. The back tyre is unpunctured, and only needs pumping up every two or three months.

I have used the machine regularly, winter and summer, averaging 50 miles a week, in all kinds of weather, often on very bad roads, and think this is a record of absolute reliability which would be hard to beat. I can do a regular 25 miles per hour. H. CHALLEN SHARP.

### GEAR RATIOS FOR TOURING.

Sir,—I drive a well-known 750 c.c. sidecar outfit, and for the *tout ensemble* have nothing but praise, but I am not pleased with the gear ratios.

Ignoring decimals, these are: 5 to 1, 9 to 1, and 15 to 1. The top gear is ideal for bad conditions, *e.g.*, 160 miles against a nor'-easter, or when the engine is a bit off colour. Also, it takes quite respectable pimples "on the run." For normal running, under favourable circumstances, it is on the low side.

Second gear is far too low, and on hills just above top-gear compass entails a monotonous 10 m.p.h. grind on quarter throttle, or fearful "revs.," neither being much to my liking. Its lowness encourages hanging on to top, when with a more reasonable ratio a change down would be made.

As regards the bottom ratio, I can honestly say I have used it seriously *twice only* in 2½ years. I always start from rest, and turn round in the street on it, both of which could be easily done on a much higher ratio. I do not go mountain-hunting from choice, but use the machine like 90 per cent. of other motorists, as a means of transport for business and pleasure. For all practical purposes, my mount is on the same footing as the two-speed Enfield.

I may say I have tried an engine sprocket with one more tooth, but the experiment was not a success. It made the top gear about right, but, as it lessened my top gear climbing capacity, without seriously raising my two low bottom ratios, it merely showed up the defects of the latter still more by the increased number of changes necessary.

I presume we have to thank the various freak trials for these low ratios being fitted as "standard." Would it not be fairer to the majority to fit more reasonable ratios, giving the chamois the option of paying for specially low ones?

A. E. M.

### SIMPLE FOUR-WHEELERS.

Sir,—"Ixion," whose page I always read with interest, even when I don't agree with him, wonders why the simple four-wheeler, "the 8 h.p. 2-seater at round about £100," does not "drive the 8 h.p. sidecar outfit (and I presume the 3-wheeled cyclecar) right off the road." He finds that this is partly the fault of the makers, who don't advertise (this has not been the fault in all cases), and "equally the fault of the clubs, who organise competitions fit only for chamois."

Well, I don't think that the clubs will level down their competitions to the capacity of "remarkably cheap and handy" 4-wheelers, which are unfit to compete with the low-powered sidecar. "Ixion" evidently thinks the same, for he adds that "it is high time that somebody organised a trial to show what such machines *can* do" (the italics are his). But if they can do very little—too little to venture more than a saunter on the highway—the trial would hardly be taken seriously, and would not supply a good advertisement. I am a little sceptical about the thousands who are waiting anxiously for the potter-bus; one meets them more often in the correspondence column than elsewhere.

As "Ixion" himself says, the three big events of the M.C.C. should be (he says "are," but that is hardly borne out by the facts) "well inside the compass" of the simplest 4-wheelers. He would himself, if he were selling them, enter "a big fleet" for the Exeter, Land's End, and Edinburgh runs. Hotspur's words occur to one:

> Why so can I and so can any man,
> But will they run if you do enter them?

As a matter of fact, a number of these machines were entered for all three events in 1921, and only two obtained first-class awards; very few finished. There are eighteen 4-wheeled cyclecars of 8 h.p. and under entered for this year's Land's End, but few of them come under "Ixion's" category of "remarkably cheap 4-wheelers." I am writing before the event, and it is possible that the results may modify my opinion of the cheap 4-wheeler, but I can see no likelihood of the simple 4-wheeled cyclecar "sweeping the sidecar right off the road." H. GEORGE MORGAN.

### LAPPING AT 60 m.p.h. ON A TOURING SINGLE.

Sir,—It may interest Mr. K. H. Leech and others to know that I have covered a lap at Brooklands at a speed of 60.1 m.p.h. on a 4 h.p. Triumph with a perfectly standard engine. This speed was confirmed by Mr. Ebblewhite. I found it exceedingly difficult to steer at this speed, and several times I was obliged to cut out in order to regain control.

In my opinion the standard 4 h.p. Triumph engine has distinct leanings towards speed, and I see no reason why one of these engines, with lightened reciprocating parts and slight detail modifications, fitted in a good steering frame, should not pass the 70 m.p.h. mark. ARIEUMPH.

Isleworth.

### CARBON FORMATION ON OIL-COOLED ENGINES.

Sir,—I read with interest Mr. G. Campling's letter in defence of the oil-cooled engine, particularly in regard to improved piston cooling. I agree with him that owing to this improved cooling, carbon deposit is not formed so rapidly as in the case of the average air-cooled engine. Indeed, it is the latter type that is the greatest offender in this direction.

It would appear that to eliminate to a great extent the formation of excessive carbon deposit, gummed rings, etc., designers should concentrate upon a more efficient exhaust system than we have at the present day, one that would completely scavenge the cylinder of hot exhaust gas, thereby using to greater advantage the cooling effect of the incoming charge. I add the usual disclaimer. W. H. W.

Coventry.

### INACCESSIBLE CARRIER TOOL-BOXES.

Sir,—May I occupy a little of your valuable space to voice my misgivings as to the true merits of the growing practice of incorporating the tool-box in the carrier?

At first sight this seems a splendid scheme, but:—

(1.) The attachment of luggage (especially if it includes several oddly-shaped parcels) becomes even more difficult than in the past (*cf.* "Ixion").

(2.) Roadside repairs and adjustments would not be made more pleasant by the additional labour of unshipping and refixing one's week-end or touring suit-case, etc.

(3.) What is to happen to Ermyntrude and her Tan-Sad?

(4.) In certain cases (if not in all), the fixing of the rear lamp (when it is again compulsory) is going to be a problem.

(5.) One of the cross tubes of the carrier provides quite the best grip for heaving the 'bus on to its stand (again, *cf.* "Ixion").

I wonder if others share my doubts? Or am I just a prejudiced IGNORAMUS?

London, N. 15.

### ARTIFICIAL OBSTACLES.

Sir,—I believe that it is a legal paradox that "the greater the truth the greater the libel." Accordingly, though it is open to anyone to criticise vindictively the abstract subject of the conduct of a competition, it is not always policy or "fair comment" to discuss frankly the conduct of any particular competitor.

With this introduction I content myself by stating that after making exhaustive inquiries I cannot find any confirmation of Mr. Cock's allegation that artificial obstructions were placed on the course of the East Midland Open Trial by marshals.

K. S. TOPPING.
(Hon. Sec., East Midland Centre, A.C.U.)

### TRAILERS.

Sir,—Having been away on holiday, I did not see your report on the proposed regulations for road vehicles on page 473 in your issue of April 13th, until I returned home.

I was horrified, however, when I read that it is suggested that a trailer shall not be used behind a motor cycle and sidecar. Why?

I could understand trailers not being allowed behind solo machines. In the old days I had a trailer, and I can see very good reasons why this should not be allowed, but my personal experience with my camping outfit last summer proved that it was perfectly safe and reliable.

I should not have been surprised if it had been suggested that I should have to pay an additional tax, and I should not have grumbled, but why the few people who, like myself, have found out the great benefit to health which can be obtained in this way, should be victimised, completely passes my comprehension.

G. A. WEATHERILL.

[Our correspondent is the author of an article which appeared in *The Motor Cycle* for Dec. 29th, 1921, on the construction of a trailer caravan.—ED.]

### ELECTRICAL TIMING.

Sir,—I am pleased to note the A.C.U. has lost no time in moving in the important matter of electrical timing, but their move, although in the right direction, does not go far enough. I think the opportunity of removing any shadow of doubt due to the personal element entering into timing has, for the time being, been lost, and the difficulties and inconveniences already attending record attempts been increased, against the one single advantage gained (admittedly a most important one) of a finer division of the second. The suggested method *is not electrical timing of the vehicle*, it is merely the electrical registration of the time two separate individuals press two separate keys or buttons—however accurately or inaccurately this may be done.

In the past it has been necessary to consult, and frequently await the convenience of, a certain number of officials, probably miles away, before a timed event could be run. In the future, apparently, this number, whatever it happens to be, must be increased with additional inconvenience and expense, and *still without the elimination of the personal element*, the effect of which is likely to differ even with the same person, depending perhaps upon his liver, the share market, or the weather. (This is not a joke. It is a known scientific fact that the mental or physical condition of an individual makes a great difference in reflex action, and only a small difference is sufficient to determine the success or otherwise of a flying start record attempt.)

At Brooklands there is satisfactory timing equipment, always there, always ready for use with the laying down of the strips. There are officials at Brooklands also always there, experienced and capable of using the equipment. Why, then, should it be necessary to make special dates, pay travelling expenses, in addition to timing fees, etc., etc., to bring other officials to the track? Is not Brooklands of sufficient importance to warrant a permanent, or, if you wish, resident time-keeper? It should be possible to go down to the track at any time and make official and electrically timed tests without having to wait, and trouble time-keepers to come from the city or elsewhere, and returns, I am convinced, would amply repay the authorities.

The value and convenience of such arrangements would also be incalculable, and, I feel sure, would meet the wishes of the majority of the Brooklands habitués. In any case I fear there will always be a certain amount of dissatisfaction or doubt until, for short distances, *true* electrical timing is used.

I make these suggestions without, of course, any reflection whatever upon those good men and true who have officiated to date, but merely because the press key method does not eliminate the personal element, is not entirely scientific or best under the circumstances, and the usual procedure neither business-like nor economical.

JAS. L. NORTON.

### USEFUL GUTTERS.

Sir,—I am glad to see that the Triumph manufacturers have discovered how one gets all those nasty mud spots on one's trousers when riding on wet roads with no overalls.

May I suggest that many other makers would do well by fitting a "V" channel from the top to the bottom of the front mudguard on each side of the wheel?

Taunton. "ALWAYS FILTHY."

### ONCE A MOTOR CYCLIST—

Sir,—After reading my letter you will probably regard me as a sort of Rip van Winkle. To explain myself, I may say that at Easter, 1909, I bought an old chain-driven Humber, with accumulator ignition, and old type of control, which I rode until the end of 1910, when I had completed about 3,500 miles.

As the machine was becoming somewhat decrepit and funds would not allow of a better machine, owing to the demands of a rising family, I sold out, hardening my heart against the desire of the sport. Since then I have neither ridden a motor cycle nor even bought a motor cycle paper, until—about a month ago when waiting for a train I bought the old blue one at the bookstall, and, believe me, the fever is on me again.

RIP VAN WINKLE.
Heckmondwike.

DR. COUÉ AT BROOKLANDS. "Ixion" recently described his very discouraging experiences at Brooklands with Dr. Coué's doctrines, but, nothing daunted, C. F. Temple, the Harley-Davidson rider, has now adopted the idea, greatly to the amusement of fellow trackmen. Whether he will have more successful results than fell to the lot of the writer of "Occasional Comments" remains to be seen.

# Best in a Gruelling Test

The London to Land's End test is a severe one of the worth of a machine. Of eight

# ARIEL

machines entered ALL finished the course without trouble and were awarded 4 Gold Medals and 4 Silver Medals.

## 100% SUCCESS.

Moreover, Mr. F. J. Watson, riding an Ariel 8 h.p. Combination, competed for the 6th time and again won a gold medal—5 gold medals and special cup in 6 years—every time an Ariel.

**That's the machine you want.**

# Those 28 high grade springs disperse road shocks by a process of absorption.

# Terry's spring seat saddle wins its way—day by day.

***Another "convert" praises its luxuriousness.***

April 25/22. Bournemouth.

"May I record my appreciation of your very excellent spring seat saddle. I have recently fitted it to my 3½ h.p. 'Rudge-Multi' Solo, and I can honestly say it is by far the most comfortable saddle I have ever ridden. My previous saddle was good, and many motor cyclists have said 'most comfortable,' but Terry's eclipses it absolutely.

Roads full of potholes I used to crawl over in fear and trembling, with jars, jolts and vibration, I can now cross as fast as the machine will go, without any discomfort whatever.

The 'Terry' saddle, instead of decreasing the shock by violent, vertical oscillation, disperses it by what you may term absorption. It is the 'Berkeley' of the motor cycle.

To appreciate your saddle, one must try it on the road. In the showroom it feels nice and soft, but one is inclined to think that its efficiency is no more than any other good quality saddle. The first ride over potholes dispels those ideas, and I venture to remark that, having once bought one of your saddles, many owners will retain their 'Terry' saddle when selling their machine.

Thanking you for such a comfort giving production.

(*Signed*) J. R.

P.S. You will be interested to know that this is the first time I have ever written to the manufacturers of any article, praising their goods to the extent I can the 'Terry' saddle. So many things are grossly over advertised with exaggerated claims."

### BLIZZARD PROTECTION FOR THE DRIVER.

Sir,—The recent blizzards and torrential rains make one wonder why screens, similar to the B.S.A. mentioned recently in *The Motor Cycle*, are not in general use.

Why not an "Easting" on the handle-bars?

C. S. MOORES.

### EQUITABLE INSURANCE.

Sir,—Mr. Siffken appears to have overlooked the fact that all the leading offices allow a rebate of 10 per cent. on renewal premiums where no claim has been made in the preceding year of insurance. In this way Mr. Siffken would have an advantage over his young friend of many accidents, in that he would only have to pay 9-10ths of the premium paid by his friend. F. H. BEVAN,

Edinburgh Assurance Co., Ltd.

### TEMPERAMENTAL ENGINES.

Sir,—I was more than usually interested in "Ixion's" reference to a "Moody Rudge Engine," which suddenly developed temporary abnormal power. I have a similar machine just over two years old, which behaves in a similar way. I am therefore delighted to take this opportunity of putting my trouble before some of the "No. 8 hats." The symptoms are somewhat different, however. The machine alternately accelerates and decelerates with regularity on any but large throttle openings. Of course, in this case the engine is running normally when accelerating and something causes it to slow up again after a few yards, the exhaust note dropping to a mere humble. The throttle may be a quarter or one-third open, but this goes on, the difference between the "slow" and "fast" running being very great. On a long run with a large (half and over, say) throttle opening, the engine gets going, and keeps going, but the amount of throttle required to get and keep it going varies with some (unknown) conditions.

I am not exactly a novice, and have gone over all ordinary possible causes. I may say when the engine does get going its performance is in every way up to Rudge standards. What is my trouble, please? R. S. L. BOOTE.

Sir,—I read with much interest "Ixion's" remarks on page 494 relating to a Rudge engine which occasionally "runs mad."

My present machine is a 1920 3½ h.p. Rudge Multi, and ever since I had the machine I have noticed the same thing occur, possibly on an average about once every fifty miles or so for about a minute or two.

I have thoroughly examined carburetter, valves, ignition, etc., several times in my endeavour to make the machine always "mad," but am still no nearer to the solution.

My machine is anything but slow for a 3½ h.p. roadster, but that extra "mad" bit if always available would considerably shorten those long straight stretches of road which seem sometimes to be too long when one's object is to "get there."

If other "Rudge" riders have experienced the same thing, it would be interesting to have the makers' views on the subject, but I have always put it down in the past to some defective adjustment which I had failed to discover.

W. D. EDWARDS.

Sir,—After reading "Ixion's" remarks, I am tempted to give my experiences with a 1911 3½ h.p. Triumph which I ride.

This machine is fitted with a Binks carburetter, and I always make use of the air brake when descending moderately steep hills. When the bottom of the hill is reached and I open the throttle I find myself the proud owner of a super-engined 'bus, and I can also give the engine more air. After about 200 yards more or less in proportion to length of hill traversed with air brake working, my engine becomes normal.

What is the explanation? The mere cooling of the cylinder seems a possible cause, but I find that cooling by other means, such as stopping for a little while, does not have the same effect at all. The increase in power just mentioned is very marked indeed, and I think that some of your readers should be able to offer a suitable explanation of this curious phenomenon. MX 599.

London, N.8.

### FROM "SERVICES" TO "SERVICE."

Sir,—Recently I was riding on a fairly quiet road between Hounslow and Staines, when upon looking at my petrol tank I discovered that I should have to obtain a fresh supply of juice at the next garage; so when I saw the welcome sign displayed outside what at first sight I took to be a church, I pulled in, and gained the information that it had been a church in its better days. This seemed to me to be rather unique, and I wonder if any of your readers can tell me of a garage with a better past than this. ROYALIST.

Windsor.

### POLICE HOLIDAY ACTIVITY.

Sir,—I notice a paragraph in a recent issue about police activity during the holidays. I went down to Porlock to see the London-Land's End, and between Tewkesbury and Porlock we had to show a sort of pass no less than 21 times. This includes the outward and return journeys.

I was also interested to see several of the Bristol Tramways and Carriage Co.'s B.S.A. outfits, and very surprised to notice that they were badly aligned, the machines leaning in towards the sidecars to a most marked extent.

C. H. STEPHENSON.

### OVERCOMING DEPRECIATION OF AWARDS.

Sir,—That the value of the gold medal in trials has depreciated as badly as the mark is proved by nearly half the competitors of the "Victory Trial" receiving this once-coveted reward, to use the remark of a friend: "Given away with a pound of tea!" Can they be termed trials at all? The course is published weeks before the event, and check times at stopping places are given. There is nothing to prevent a competitor going over the course until he knows it off by heart. With the modern machine and this knowledge the rest is simple. The course should not be made public until the morning of the event; this would give all a fair chance.

Now we all know that the modern machine fitted with suitable gears will take us anywhere the wheel will grip the road.

I suggest that maximum marks would be awarded to only those competitors who completed the course on *top gear*. Sidecarists would, of course, be awarded "bonus" marks. This would show us exactly what the engine would do on a given gear ratio, as well as put every competitor on the same footing. It would certainly add to the sport of the trial, and also the skill of the driver.

Birmingham. ANASTIGMAT.

[We take it that our correspondent intends that easier trial courses should also be chosen; no machine would have retained full marks over the Victory Trial route using only top gear.—ED.]

# T.T. NOTES and NEWS

## Designers and Riders making Serious Preparations for the Island.

EXPERIMENTAL and competitions departments of most motor cycle factories are working at full pressure for the T.T. races. As usual, many firms are behind schedule with the new racers, but perhaps not so much so as in previous years. Certain it is, those who have had their mounts on the road and track for some time—everything else being equal—stand the better chance.

* * * *

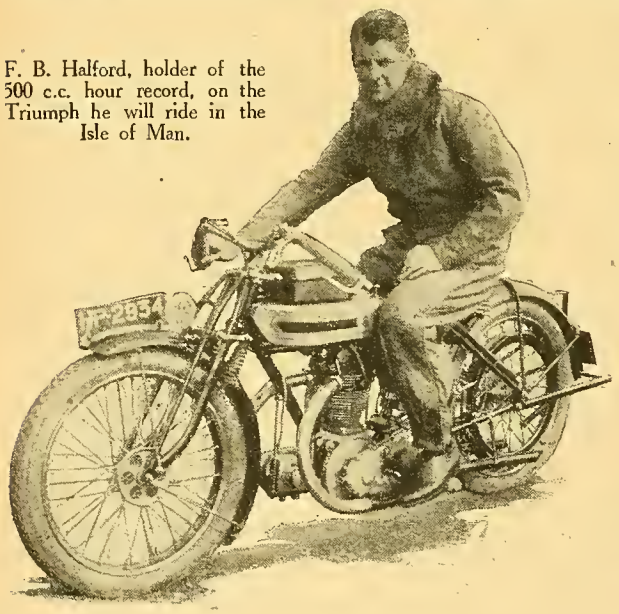
Two of the T.T. riders, Ivor Thomas and Jack Thomas, are members of the Neath M.C.C., the former being its chairman.

* * * *

Detail modifications will be found in the Ivy two-stroke models, and the most striking of these is the aluminium alloy detachable cylinder head. Another change is that a separate oil tank will be fitted behind the saddle tube.

* * * *

Among the well-known firms which will be absentees from the races this year is the New Rover Cycle Co. Mr. F. L. Allen, the general manager, informs us that it was found impossible to enter owing to the races being held in the week preceding the Whitsuntide holidays—probably the busiest week of the year for motor cycle manufacturers. *The Motor Cycle* pointed out the unsuitability of the chosen dates due to (1) the proximity to Whitsuntide and (2) the clashing of public interest in the old classic London-Edinburgh run, which starts on the evening following the Senior Race.



F. B. Halford, holder of the 500 c.c. hour record, on the Triumph he will ride in the Isle of Man.

In the Senior event the Scott machines are to be 3½ h.p. Squirrels, and they will be ridden by C. P. Wood, H. Langman and Ivor Thomas.

* * * *

The New Comet entered remains practically unchanged, in fact the machine will be the identical motor cycle used in the last two Junior events. This is surely a record for the Tourist Trophy Races.

* * * * *

In addition to the standard Norton entry it is more than probable that at least one overhead valve Norton will take part in the race. The Norton trade team consists of D. Brown, J. W. Shaw, R. T. Cawthorne, H. Hassall, and N. Black.

* * * *

Although two types of Rudge machines are entered, they will be similar as regards engines. Externally, there is not very much change in the design, though the distribution of metal in the cylinders has been re-proportioned and a new inlet valve dome is a noticeable feature. The frame of the Multi model is founded on the well-known 1914 type, and the chief modification in transmission lies in a simple pedal operated control of the gear. The fact that the wheelbase of the three-speed model is only one inch longer than that of the Multi is something of an achievement; the weight has been kept as low as possible and a close ratio Rudge gear box is employed. A spring shock absorber is fitted to the engine-shaft and an experimental clutch is giving most satisfactory results on the machines which are now under test.

* * * *

There is a likelihood of six 350 c.c. machines having "a flutter" in the Senior event. Encouraged by the success of the A.J.S. last year there is some method in this apparent madness, but will a "350" be good enough to win this year?

* * * *

Certainly if designers learned their lesson last year the "350" should be well beaten; but how many of the competition staffs have realised that rapid acceleration is worth more than an extra mile or two down the mountain?

In the Junior Race F. J. Price will be riding a 2¾ h.p. Diamond, and not a 2¼ h.p. as stated in the official list.

* * * *

C. Waterhouse, the honorary secretary of the Heaton Moor M.C.C., will represent his club on a Sunbeam in the Senior Race.

* * * *

Some of the Rudge riders and staff are already in the Isle of Man for a preliminary look round. Rumour has it that they are using the new Multi with foot control.

* * * *

Howard Riddell, who is riding a Rudge, took part in the 1913, 1914 and 1921 Tourist Trophy races, and did a good deal of racing in the United States in 1920.

* * * *

Naturally everyone will watch for the appearance of the latest A.J.S. It is yet too early to lift the veil, but there are excellent reasons for expecting an even better performance from this make than last year.

* * * *

W. L. Danskin, now a member of the Rudge competitions staff, was a consistent rider of Rover machines before the war. He has had successes in the London-Exeter and London-Land's End runs, and in the last three English Six Days' Trials.

* * * *

In the lightweight race two-strokes outnumber four-strokes, and the chances of this type are by no means negligible since it is represented by manufacturers of the highest repute.

* * * *

This year mounted on a Rudge, J. A. Watson-Bourne is an experienced T.T. rider. He just missed winning the Junior T.T. on a Blackburne in 1920, when he came in second, while in the 1921 Senior Race he finished fifth on a Triumph.

* * * *

Last year considerable attention was attracted to the Sun-Vitesse two-stroke with its rotary inlet valve. A somewhat similar engine will be used in the forthcoming races, but it is probable that at least one of the three machines entered will have an aluminium cylinder with steel liner. If tests which are being carried out at the present moment prove satisfactory, it is not unlikely that all the machines will be so equipped. The frame is neatly designed, Webb internal expanding brakes being used both front and rear. A curious departure from the conventional lies in the fact that an oil tank will be fitted above the top tube, while the toolbox will occupy a position behind the saddle tube.

**T.T. Notes and News.—**

Rates at which motor cycles accompanied by passengers are carried between Liverpool and Douglas on the I.O.M. Steam Packet Co.'s vessels are: Motor bicycles, 5s.; two-seated motor bicycles, 6s.; sidecar outfits 9s.; motor tricycles, 9s.

* * * *

Sidecars must be detached from motor cycles when conveyed by the I.O.M. steamers.

* * * *

Cycle cars are charged at the rate of 4s. 9d. per cwt. not exceeding 12 cwt. Liverpool town dues are 2s. 6d. per car.

* * * *

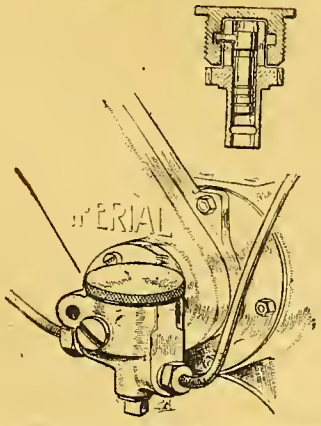
Licensed porters are authorised by the Douglas Town Council to charge 2s. for assisting in the landing of machines; if more than one porter is necessary no more than 4s. may be charged. An extra 2s. is demanded if a sidecar is fitted.

* * * *

From Monday, May 1st to Friday, May 19th, there will be daily sailings between Liverpool and Douglas on weekdays at 10.30 a.m. On the Saturdays May 6th and 13th the sailings will be at 3 p.m. The steamers on this service will be the *Douglas* and the *Fenella*.

* * * *

A double daily express service will be run from May 20th to June 30th from Liverpool at 10.30 a.m. and 3 p.m., and there will be an extra service on Tuesday, May 30th, and Thursday, June 1st, at 1 a.m.



Mechanical lubrication will be a feature of the new Imperial T.T. machines. A worm driven bronze shell with suitable ports is rotated at 1/120th engine speed, while the plunger is controlled by a cam track in the cap. By rotating the cap the amount of oil fed is infinitely variable.

From Douglas the return crossing may be made every weekday at 9 a.m. or 4 p.m., with an extra boat on Tuesday, May 30th, and Thursday, June 1st, at 12.30 (midnight).

* * * *

Special excursions have been arranged in connection with the T.T. Races on Tuesday and Thursday, May 30th and June 1st. The boats leave Liverpool for Douglas at 1 a.m. and 10.30 a.m., and return at 4 p.m. and 12.30 (midnight). Fleetwood to Douglas, 10.30 a.m., return from Douglas, 6 p.m. Day excursion fares: First, 12s. 6d.; third, 9s.

* * * *

For a period of three weeks prior to the races a nominal fee will be charged for temporary registration of visitors' machines.

* * * *

To all intents and purposes the Island is a foreign country, consequently, motor cycles brought from there to Great Britain are liable to an import duty of 33⅓%. In order to avoid difficulty, however, machines being temporarily exported from the United Kingdom to the I.O.M. are examined by the Liverpool Customs officers prior to leaving, so that they may be identified on their return.

* * * *

Representation has been made to the Royal Automobile Club by the Auto-Cycle Union that the practising for cars should cease until the motor cycle races have been held.

* * * *

There will be no exhibition of T.T. machines in Douglas prior to the races.

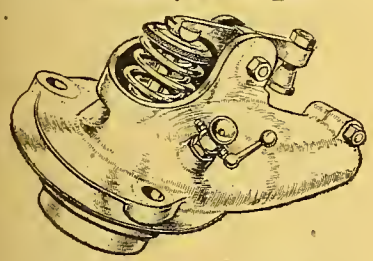
* * * *

As was the case last year, John Bull milestones will be erected round the T.T. course by the Leicester Rubber Co., Ltd. These will be in place much earlier this year, so that riders will get the fullest possible benefit from them.

# BACK TO RACING AGAIN.

## Rudge Machines in Preparation for the T.T. Detail Modifications.

THE return of the Rudge to the Tourist Trophy has caused considerable interest. Concerning the Multi model there is at first sight but little change from previous practice, except for the fact that the Multi gear is direct operated by a rocking pedal on the left-hand side. In addition to this the front brake is now of the flat rim pattern, similar to that used on the rear belt drum so successfully in the past.



A new inlet dome, facing forwards, is a feature of the T.T. Rudges.

A new inlet valve dome, which allows for very much easier gas flow, is the most obvious change in the engine, while the Senspray carburetter faces forwards. In addition to this the inlet valve itself has been increased to 1¾in. diameter.

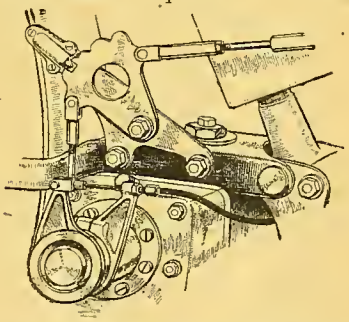
### Engine Improvements.

Though it is less obvious, the cylinder casting has been very much improved, and besides the fact that the walls have been stiffened up near the head, the ribs have been modified and are nicely radiused into the walls. The compression ratio will be approximately 5 to 1, a domed aluminium piston with a plain skirt being employed. A special stainless steel exhaust valve and a large exhaust pipe are now fitted. In the Multi model the gear ratios range from 3½ to 1 to 7 to 1, and John Bull belts will be used; Dunlop cord 650×65 tyres are fitted, but 700×80 covers of the same make are fitted to the chain-driven model, the engine of which is similar.

### Clutch on Countershaft.

On the extended main shaft of the close ratio gearbox is mounted a new dry plate clutch entirely made up of steel pressings. This clutch is giving admirable results, and is operated in rather an unusual way. Both hand and foot controls are used, operating through the same Bowden wire, the hand control actuating the clutch through the cable and the pedal through the casing. A Best mechanical oil pump will supply the lubricant from a tank on the saddle tube, and an auxiliary hand-pump is fitted in case of emergency.

Carried off the front down tube, the change speed lever is in a convenient position, and the gate is splined on to the supporting bracket so that it may be adjusted to the convenience of the rider. From the striking lever a control rod passes to a quadrant similar to the normal Rudge striking quadrant, but the quadrant itself is pivoted at the base,



The substantial clutch operating mechanism and the eccentric gear box adjustment may be seen in the above sketch.

and is locked by a stationary plunger. The gear striking mechanism is particularly simple and effective. The frame of the chain-driven model is only 1in. longer than that of the Multi, and the centre of gravity has been arranged as low as possible.

Both filler caps are on the left-hand side, so as to be convenient for the filling stations, and large spring-retained caps are employed. Tentative gear ratios for the chain-driven machine are 4.3 to 1, 6 to 1, and 8 to 1.

# THE SCOTTISH 6 Days TRIALS

## Preliminaries at Edinburgh; Snow on Mountains Necessitates Route Changes; The Start.

As the competitors travelled north, whether by rail or road, wide caps of snow on the Cumbrian fells roused forebodings which were amply confirmed on arrival at Edinburgh. Here the genial committee of the Edinburgh and District M.C.C. were found busy revising the trials routes in response to a barrage of telegrams from various road surveyors, local correspondents, and others. "Drifts twenty feet deep over Cockbridge Ladder, and still snowing," ran one of these wires.

The early date rendered necessary by the congestion of the 1922 competitions programme, and the usual scarcity of hotel accommodation, had already pinned the Trial south of Inverness; now at the eleventh hour several of the southerly moorland areas were perforce cut out. If report was to be trusted, the sodden condition of what remained would more than atone for any excisions, and by Saturday evening, lightweight entrants, remembering the "Arctic" Trial, rejoiced that their machines could be carried over snowdrifts in case of need.

### Revised Routes.

Several of the observed hills were affected by these last-minute changes in the course. On Tuesday's run, Rinloon and Cockbridge were exchanged for Cabrach and Bridge of Avon (always provided that the official plough could clear the latter hill in time). On Thursday Cairn o' Mount (north side) took the place of Cabrach. On Saturday, Tinto (of which nobody was afraid) gave place to Tynron Hill, the subject of many extremely alarmist rumours.

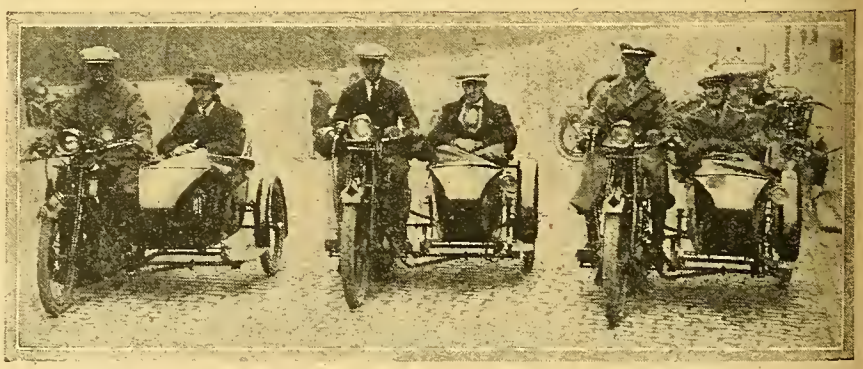
To-day's new route is:—Grantown, Bridge-of-Brown (observed hill), Achbreck, Cabrach, Castle Newe, Ballater, Banchory, Cairn o' Mount (observed hill), Charterstane, Aberdeen.

To-morrow, Friday:—Aberdeen, Laurencekirk, Forfar, Perth, Dollar, Falkirk, Murrayfield Car Terminns, Edinburgh.

Saturday's route will be:—Edinburgh, Broughton, Talla Linns (observed hill), Cappercleugh, Moffat, Durisdeer, Tynron (observed hill), Penpont, Wanlock Water, Biggar, Blackford Hill, Edinburgh (observed hill).

### Customs House Methods.

The organisation of the Edinburgh and District M.C.C. was always good and improves annually. With a minimum of fuss the 148 entrants were marshalled on Sunday morning into the darkest and least convenient garage ever utilised for a first-class trial. Hawk-eyed officials, doubtless with previous training in H.M. Customs, went through baggage and sidecars with fine-toothed combs; the haul of illegitimate spare parts included no fewer than five complete magnetos, all duly confiscated. Even tyre repair kits were opened for examination, and as some of the ladies complained that their suit cases were ransacked, no doubt a female searcher figured on the club staff. Quite a bevy of ladies started this year, many as passengers on cars or sidecars, but two as drivers of light cars, and three stalwart heroines as drivers of motor cycles: Mrs. Hardee (Matchless sc.), Mrs. Jansen (Ner-a-car), and Mrs. Knowles (348 A.J.S.). A certain amount of cunning had plainly been devoted to the wording of the rules, and especially with a view to discouraging doubtful claims for clean ascents of observed hills, which caused so much heartburning in 1921. The competitors as a body regretted the neces-



The Ariel team on 992 c.c. sidecars. L. Newey, F. J. Watson and W. Woodcock.

The New Gerrard trio. R. M. Wishart on a 482 c.c. machine, J. G. Porter (269 c.c.) and J. A. Porter (482 c.c.).

sity for dating the events so early in the season. Quite apart from the tremendous handicap imposed by bad weather, many of the loveliest parts of the Highlands are completely unattainable in May, and others are shorn of half their beauty until the forests come into leaf. The spring was so late that at Edinburgh on April 29th the trees were still black and the daffodils had not reached their zenith.

### Newcomers to the Six Days.

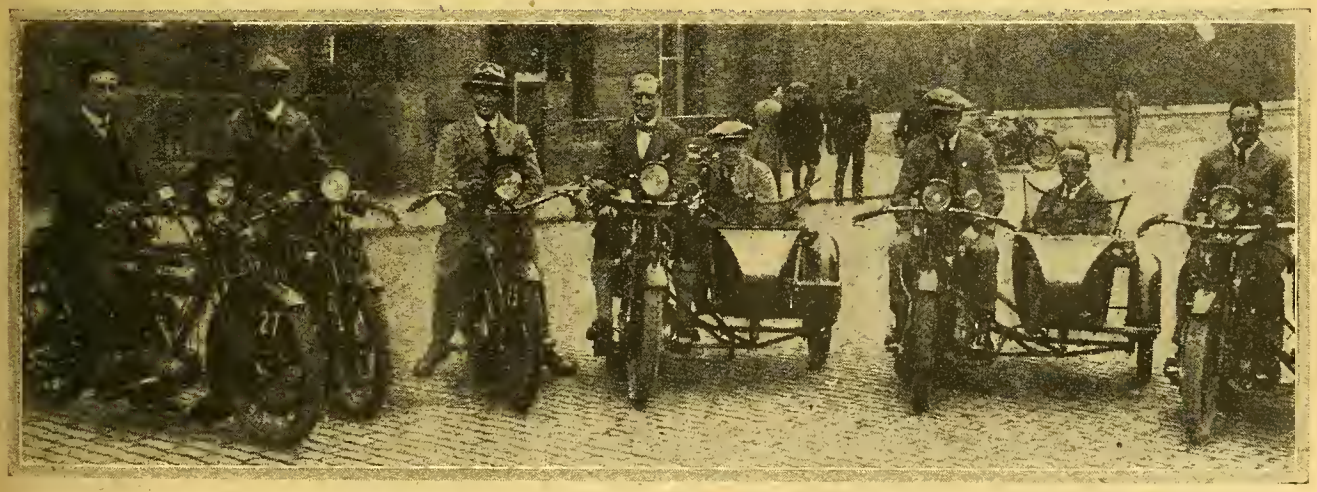
Many of the trials entrants are really making their *début* in an event of first-class rank, and the behaviour of their machines will be closely scrutinised. Among such are the Barr and Stroud engines; 348 c.c. Raleigh, 496 c.c. Zenith-Bradshaw, New Hudson cycle car, o.h.v. Triumph, Harper Runabout, New Gerrard, 4-cylinder Henderson, McKechnie spring frame, Ner-a-car, and the G.R.I.

### The Hill Tests.

None of the new hills were seriously expected to thin the ranks of gold medallists. Year by year the promoters increase their regard for Amulree and Glendoe as tests which sift out inferior machines and inferior drivers. Inverfarigaig was transformed into a "special award" hill for 1922, an admission that no disgrace is implied when a newcomer fails to climb it after others have cut up the corners. The entire trial ascends these "special" hills, but no gold medals are sacrificed by failure upon them. Motor cyclists do not look with any special favour upon the inclusion of light car entries in their events. Twenty-five light cars were entered this year, and were started indiscriminately, in order of entry—a system which contains serious threats of baulks in hill climbs, and creates much trouble about overtaking along moorland tracks which happen to be both narrow and rough.

The clothing question had obviously been the subject of much thought. A majority of the men evidently decided that a Scottish May was wet and cold, so they brought Sidcot suits, flying

Martinsyde competitors. A. F. Symes and J. T. Bashall on 678 c.c. sidecars, E. H. Gifford (498 c.c. solo), and W. H. Bashall (678 c.c. sidecar).



The two B.S.A. teams of solo and sidecar riders. A. A. Farr, M. C. Breeze, L. L. Sealey (on 557 c.c. machines), and B. L. Bird, S. H. Perrey and J. H. Walker (on 770 c.c. sidecars).

**The Scottish Six Days Trials.—**

coats, and other sub-arctic garments. On the other hand, quite tropical temperatures are not unknown at this time of year, and a sudden change might yet cause plenty of discomfort and fun. The present writer has gone south after two consecutive Scottish Six Days (*a*) with his face peeled; (*b*) with chilblains —so one never knows.

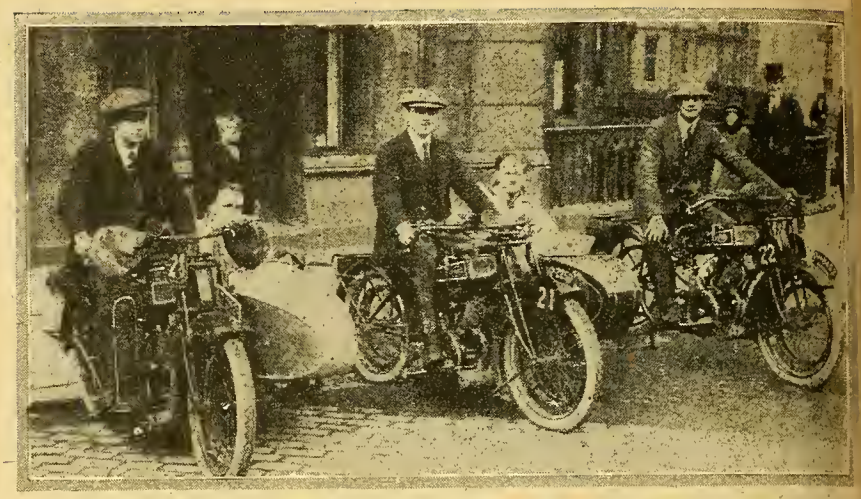
### Details of the Machines.

On the whole there was surprisingly little novelty among the competing machines; and the few deviations from catalogue specification were mainly those of convenience, effected by the drivers themselves. For example, Archie Cocks, remembering a toss in the London-Land's End Trial, caused by running off the road in a blinding hailstorm, had ensured that this would not happen again by fitting a small windscreen on the handle-bars of his 600 c.c. Beardmore-Precision outfit. The supporting member consisted of an old metal competition number plate, suitably bent, which also served in its original capacity. Much ingenuity had also been displayed in stowing the more commonly used tools and spares in Cocks's sidecar.

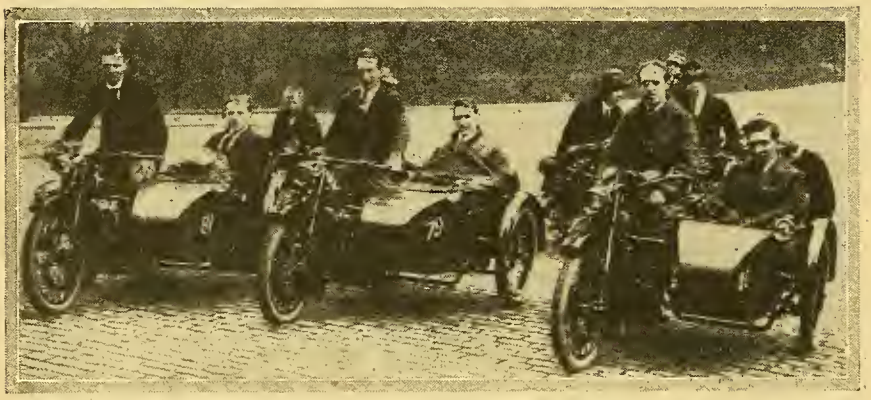
Another Beardmore rider, H. Greaves, had the latest edition of that make fitted with a Barr and Stroud engine; the exhaust arrangements on this machine were particularly neat, the necessary curve in the straight-through pipe being in a horizontal instead of a vertical plane.

Mrs. Jansen's Ner-a-car had undergone several modifications which converted it very cleverly from a potterer's runabout to a pukka trials mount. An emergency low gear of approximately 20 to 1 was provided by an auxiliary primary drive, a separate oil-tank adorned the front mudguard, feeding lubricant through a standard Best and Lloyd drip feed, and a double Bowden lever carburetter control replaced the twist grip.

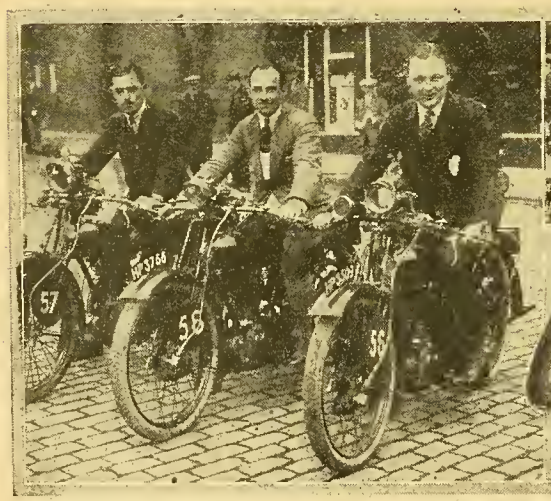
F. W. Becker's spring-frame McKechnie outfit was to all intents and purposes the show model already described in *The Motor Cycle*, but the designer's (W. E. McKechnie) own solo mount was altered in several respects, notably in the gear box, now a Jardine four-speed, and in the provision of rubber-covered stops to limit the amount of frame movement on the really bad roads expected by the competitors.



The Dunelt team. C. W. Vallings, W. Chase, B. Cathrick on 499 c.c. sidecars.



Single cylinder sidecars. The P. and M. team on machines of 555 c.c. capacity. G. M. Townsend, R. Lewis and P. Cunningham.



Francis-Barnett lightweight team on 346 c.c. machines. E. A. Barnett, S. M. Greening, and D. A. Atkin.

The Scott team. W. Moore, W. L. Guy, and G. W. Scott. Special knee-grips are fitted on the tanks.

**The Scottish Six Days Trials.—**

Mrs. Hardee's Matchless outfit had an Anzani engine, with neat covers for the over-head valve gear, fed with oil from a supplementary B. & L. sight feed in the tank top.

### Will be Watched Closely.

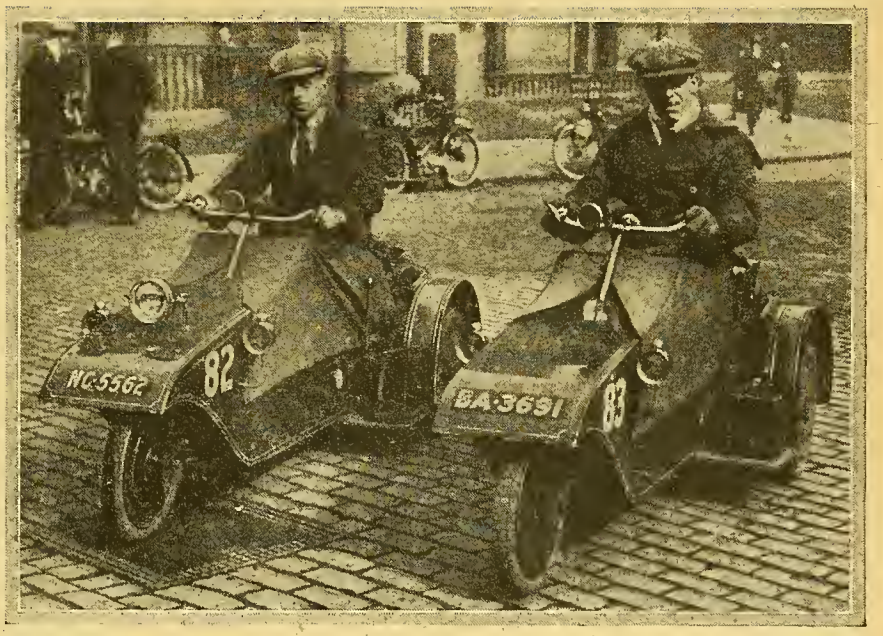
The Harper runabouts turned up in good time, and caused considerable speculation among the onlookers as to the procedure on Amulree—would the riders remain tied up in their storm aprons and, if so, what was going to happen if they failed? The drivers themselves, however, appeared confident that the difficulty would not arise. Two spare wheels and tyres were carried on each, the wheels, of course, being detachable and interchangeable. To use a well-worn phrase, their performances will be watched with interest.

On J. A. Watson-Bourne's big Brough-Superior there was one of the latest two-jet Bink carburetters, specially designed for this machine; the driver expressed considerable satisfaction to us regarding its behaviour. Above one-third throttle it is almost entirely automatic in action and acceleration is said to be particularly good.

### Two-Strokes.

Even less revolutionary were the remainder of the extra fitments. However, the fact that the Scott team had fitted knee-grips of special design to their machines is certainly worthy of note. J. M. Philpot's little nest of spare sparking plugs of all makes and sizes on his Velocette also aroused interest and some amusement, as did the same rider's massive thigh-operated big car type of bulb-horn, extending right down one of the rear stays.

The "5 h.p. Scott and Gasking," to have been ridden, according to the programme, by Donald Scott, did not materialise, and its place was taken by a 269 c.c. Excelsior two-stroke, the only representative of that make in the trial.



A plucky pair who have started the formidable trial on Harper runabouts, fitted with 269 c.c. engines. Armstrong Graham and R. O. Harper.

## First Day—The Start.

The only non-starters were D. C. Sangster (499 Sunbeam) and George Brough (976 Brough Superior), but W. Chase rode Pehrson's Dunelt, Watson rode Stock's Ariel sc., C. N. Faulconbridge was on White's Rudge, and A. Shepherd took over Handley's O.K. R. Evans on a lightweight Raleigh, and D. S. Bell (800 A.J.S. sc.), were additions to the programme.

Just as No. 2 started away at the lamentably early hour of 7.30 the rain, which had fallen almost continuously through the night, restarted; all the way to Stirling it fell more or less continuously, and even at this early stage belt slip was not unknown among the lightweight entries, for the tar macadamed roads were simply awash. On the whole this portion of the route was improved compared with last year, but it was, and always will remain, the most dull and unpleasant side of the week. Sherriffmuir Hill, four miles beyond Stirling, was in an extremely wet condition, and caused quite a lot of anxiety among the bedraggled competitors. But Amulree remained as dangerous as ever it was. No alteration had been made to the first day's route, and after climbing Trinafour and Kenmore in the afternoon the riders returned to Perth

## FROM SINGAPORE TO LONDON.

TWO ambitious motor cyclists, F. A. F. Johnstone (550 Triumph) and E. D. Hill (348 Douglas) are endeavouring to ride from Singapore to London. They left on December 21st and rode to Penang. Thereafter they found the roads unrideable, so made their way along the railway to Patalung, where they joined the roadway and got as far as Rompibun. Getting their machines rigged up so as to be able to ride along the railway track, they were then unable to get the necessary permission to use the lines, and therefore they went on to Bangkok by train. Owing to the total absence of roads and the nature of the country through which they must pass a considerable portion of their journey will have to be done by train and boat. From Burma they proceed to India, where the roads should present no difficulties, and then pass on to Persia. From Basra it is intended to use the railway attachment through Mesopotamia and on to Constantinople, after which plain sailing is expected. The journey will take about eight months, and the riders carry enough petrol for 600 miles.

## RESULTS OF THE LONDON-HOLYHEAD TRIAL.

LONDON to Holyhead by the main road is as easy as the Ealing and District M.C. Club's route over the Welsh mountains at Easter was difficult, hence the number of gold medals awarded is comparatively small, and those received are consequently well earned. The results are as follows:—

THE MAUDES' CHALLENGE SHIELD AND GOLD MEDALS.

Joint holders: V. Gayford (3½ Zenith-Bradshaw) and Hon. V. A. Bruce (11 A.C. car).

GOLD MEDALS.

W. D. Pugh (3½ Zenith-Bradshaw).
H. C. Nias (3½ Ariel).
J. Hall (2¾ Trump).
W. S. Schooley (3½ Zenith-Bradshaw).
P. Pehrson (4 Dunelt sc.).
A. G. Wall (3 A.B.C.).
M. O'Reilly (5-6 N.U.T.).
F. J. Youngs (2¼ O.K. Junior).
S. M. Greening (2¾ Coventry Eagle).
S. A. McCarthy (8 Morgan).

SILVER MEDALS.

S. E. Longman (3½ Zenith-Bradshaw sc.).
T. A. Ward (2¾ Sirrah-Blackburne).

BRONZE MEDALS.

Mrs. G. M. Jansen (2¼ Ner-a-Car).
G. H. Goodall (8 Morgan).

TEAM PRIZE.

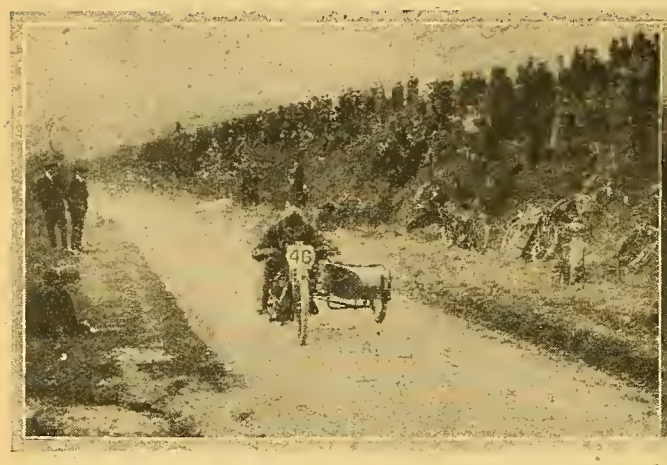
Zenith Motors—Messrs. Gayford, Pugh and Longman on Zenith-Bradshaws.

## WORKERS AT PLAY.

In the Coventry Works Motor Association's trial reported in our last issue, the solo award was won by W. Dono (Triumph), of the Triumph Works team; B. Brandish (Triumph), of the Hillman team, was runner-up. There was a much bigger entry of sidecars, and out of the twenty-three finishers in this class, G. Bettridge (4 Norton sc.), of the M.L. Works Club, had the least time error; the runner-up was L. Griffiths (Triumph), of the B.T.H. team.

# ONLY OPEN HILL CLIMB OF 1922.

## Well Supported South Midland Centre (A.C.U.) Event at Kop.



E. Searle (348 Sheffield Henderson sidecar) making a good climb.

Fastest time of the day. G. Dance on his 492 c.c. Sunbeam.

FINE weather, a record attendance, and George Dance's brilliant ascents of Kop Hill, were the chief features of the South Midland Centre's hill-climb on Saturday.

Everything possible had been done to make the event a success; police, R.A.C. road guides, and A.A. patrols all co-operating to regulate the dense traffic and park the numerous cars and motor cycles which bore spectators to this popular venue. Some idea of the vast concourse of people present may be gathered from the fact that 1,200 programmes were sold—the complete stock—quite early in the afternoon.

### One Run Only.

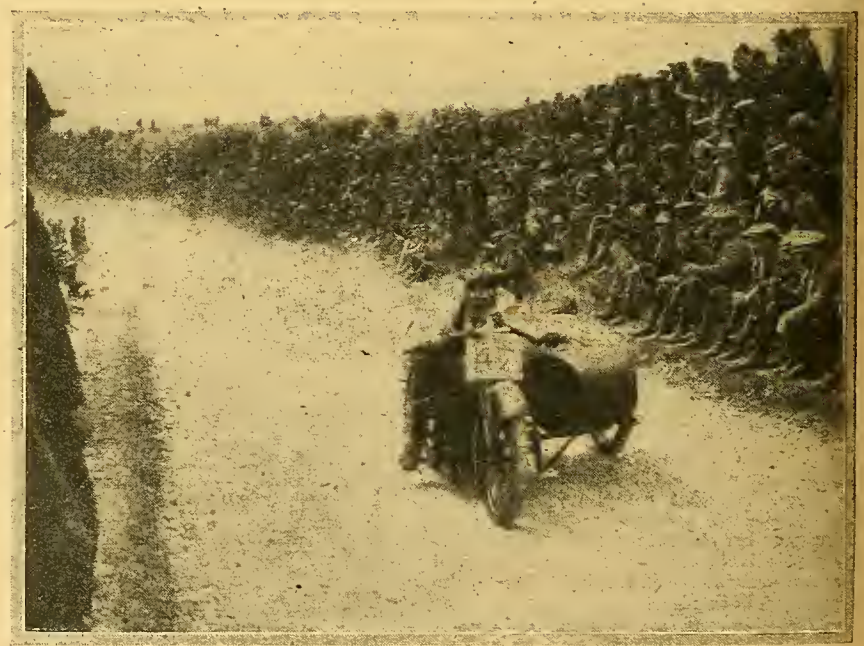
In many cases the events were divided up into pairs—experts barred to experts and general—and when this occurred no rider rode in more than one event of the two. For example, a private owner might enter for the "expert barred" class and also for the "expert and general" class, and when this happened, although his name appeared twice, he only rode once, but his time was recorded in both classes. This resulted in a considerable saving of time. Even then, the event which started at about 2.40 did not conclude until after 6.30. Fortunately there were no formula results, and owing to the excellent arrangements of posting the times promptly after each performance at the start and finish, people were able to follow the competition with interest throughout its duration.

### Thoughtless Spectators.

Competitors had to wear T.T. helmets, and owing to this regulation one unfortunate rider who fell off was saved from severe injury. Until this happened the crowd was rather difficult to control, and Baragwanath, who rode an M.A.G.-engined Matchless sidecar, and Bridgman (Indian sidecar) complained bitterly of people wandering on the course and obstructing their view of the road. After the accident the crowd sobered down somewhat, and the course was thereafter kept clear.

The first few classes provided little of interest, save that a few of the private owner entrants suffered from speed wobble. Failures were of course rare, and occurred owing to falls, of which there were only two, to a mechanical defect, and to a puncture. The latter trouble happened to Marshall (496 Matchless), whose back tyre punctured within sight of the finish. Riddoch (986 o.h.v. Zenith), the hope of the Oxford University M.C.C., smashed a valve spring early in his climb, and, notwithstanding, came up on one cylinder in 51sec. Fortunately he had arranged matters so that the valves could not fall into the cylinder.

Naturally Dance's performances on the Sunbeam overshadowed all others. The effect of his first superb climb in 28 3-5sec. was most interesting. First he came up, as the Americans would say, "like a streak." Hardly had the noise of the exhaust died away when no sound could be heard except the clapping of the enthusiastic spectators. Then a moment's silence, followed by the buzz of conversation made up of favourable comments on his magnificent riding. People travelling



A big crowd witnessed the excellent sport on Kop Hill on Saturday last. E. C. E. Baragwanath "all out" on his Matchless sidecar. He was disqualified on technical grounds.

**nly Open Hill Climb of 1922.—**

ip in 38-40sec. had wobbled dangerously, nd yet this superman, moving at express rain speed, had kept "the even tenor of is way." True his machine leaped from crag to crag," but, notwithstanding, he teered a perfect course.

**Organisation.**

So far as the organisation was con-erned there were small grounds for omplaint, but it is clear that in future pen hill-climbs should be timed by two ime-keepers. Though in this case the ield telephone worked perfectly, and Ir. A. G. Reynolds was as accurate and recise as his own stop-watches, too much lepended on the individuality of the two fficials who worked the buzzer at the tart; and on more than one occasion ompetitors' times were missed alto-ether. On the whole the riding was ood, but certain private owners who shut heir throttles before reaching the finish-ng line should receive a course in hill-limbing before competing again. Re-ults :—

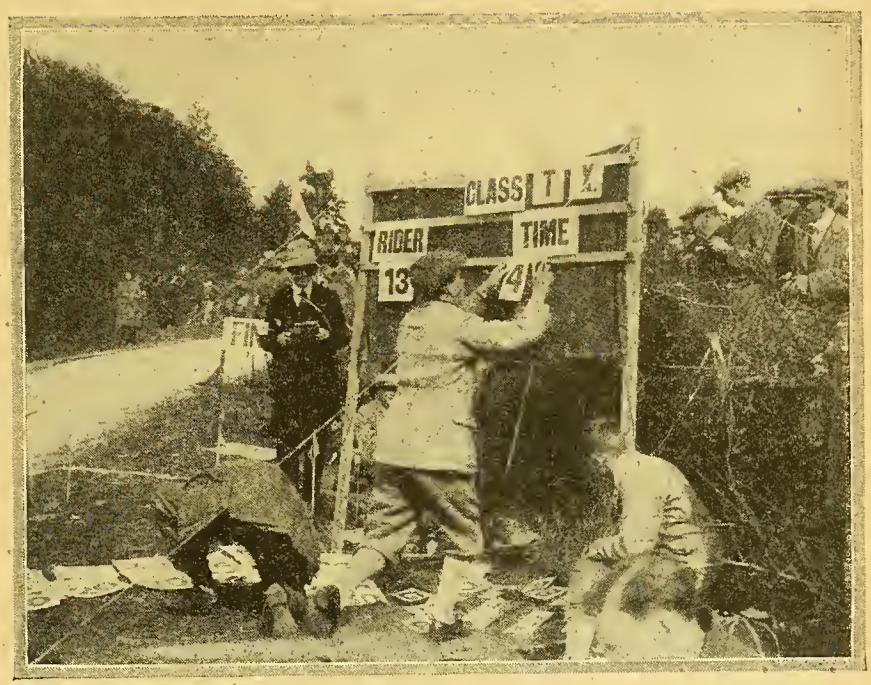
A. Fitzgerald (490 Norton sc.), 47 sec.

Touring passenger motor cycles, as above (experts and general) :—
E. A. Bridgman (998 Indian sc.), 38⅘ sec.
C. Broom Smith (998 Indian sc.), 44⅕ sec.
N. V. Young (492 Sunbeam sc.), 48 sec.



Spectators were kept well informed as to the classes being run and the times made by the riders. A very excellent arrangement which other clubs might follow.

Touring motor cycles not exceeding 500 c.c. (experts barred) :—
A. W. Thrush (492 Sunbeam), 35⅗ sec.
R. Pugh (499 Triumph), 35⅘ sec.
H. James (490 Norton), 38⅕ sec.
Member of N.W. London M.C.

Touring cycle cars not exceeding 1,100 c.c. (expert and general) :—
H. R. Godfrey (1086 G.N.), 41⅕ sec.
H. F. S. Morgan (875 Morgan), 45⅕ sec.
C. D. Malby (1086 Morgan), 48⅖ sec.

Any type motor bicycle up to 500 c.c. (experts barred) :—
R. T. Grogan (490 Norton), 34⅕ sec.
E. A. Marshall (496 Matchless), 35 sec.
A. W. Thrush (492 Sunbeam), 36⅗ sec. (silver medal, fastest member Oxford M.C.).
A. Fraser (349 Sheffield-Henderson), 38⅗ sec. (silver medal, fastest member N. London M.C.C.).

Any type motor bicycle not exceeding 500 c.c. (experts and general) :—
G. Dance (492 Sunbeam), 28⅗ sec.
E. A. Marshall (496 Matchless-M.A.G.), 35 sec.
E. Searle (350 Sheffield-Henderson), 42⅕ sec.

Touring motor bicycles not exceeding 750 c.c. (experts barred) :—
G. F. Bainbridge (745 Martinsyde), 34 sec.
A. W. Thrush (492 Sunbeam), 35⅖ sec.
R. T. Grogan (490 Norton), 35⅗ sec.

Experts barred. Any motor bicycle not exceeding 750 c.c. :—
E. A. Marshall (496 Matchless), 33⅗ sec.
G. F. Bainbridge (745 Martinsyde), 34⅕ sec.
A. W. Thrush (492 Sunbeam), 35⅗ sec. (fastest member Oxford M.C.).

As above (experts and general) :—
G. Dance (492 Sunbeam), 27⅕ sec.
E. A. Marshall (496 Matchless-M.A.G.), 33⅖ sec.

Experts barred. Touring motor bicycles unlimited :—
C. Broom-Smith (998 Indian), 33⅓ sec.
E. W Finch (996 Zenith), 35 sec. (fastest time Slough and District M.C.C.).
A. W. Thrush (492 Sunbeam), 36⅗ sec.
* Fastest time of the day (approx. 65 m.p.h.).

Motor bicycles unlimited (expert and general) :—
C. Broom-Smith (998 Indian), 33⅓ sec.
E. Searle (350 Sheffield-Henderson), 37⅕ sec.

Any motor bicycle unlimited (experts barred) :—
G. J. Read (996 Enfield-M.A.G.), 30⅗ sec.
C. Broom-Smith (998 Indian), 32⅕ sec. (fastest time Bucks County M.C.C.).
L. Avery (988 Harley-Davidson), 35⅓ sec.

Any motor bicycle unlimited (experts and general) :—
G. Dance (492 Sunbeam), 28⅓ sec.
G. J. Read (998 Enfield-M.A.G.), 29⅓ sec.
C. Broom-Smith (998 Indian), 32⅓ sec.

In the next class for cars, the only competitor was H. R. Godfrey (belt-driven G.N.), whose time was (standing start) 38 4-5sec.—a considerable improvement on his previous performance. The length of the course was 802 yards.

## DUBLIN HILL CLIMB.

THE Dublin and District Motor Cycle Club held an open hill-climbing handicap on Saturday last at the de Selby Quarries Hill, near Tallaght. The various classes were well supported, the 350 to 600 c.c. solo division naturally having the largest number of entries. In this class the chief interest was centred in the scratch pair, T. E. Greene (3½ Douglas) and A. A. Wayte (3½ Sunbeam). The veteran Greene hardly rode up to expectations and was decisively beaten by his younger rival, who also won on handicap. The handicapping in the various events was not unsatisfactory, and most of the men were brought nicely together. The placed men in the various classes were as under :—

TWO-STROKE (UP TO 300 c.c.) CLASS.

| | H'cap time. min. | sec. |
|---|---|---|
| 1, J. H. Patton (2¼ James), 4 sec. ... | 1 | 21⅖ |
| 2, D. Allen (2½ Sun-Vitesse), scr. ... | 1 | 23⅕ |
| 3, Dr. T. F. Broderick (2¼ Levis), 2 sec. ... ... ... ... ... | 1 | 32⅕ |

FOUR-STROKE (UP TO 350 c.c.) CLASS.

| | H'cap time. min. | sec. |
|---|---|---|
| 1, H. J. McNally (2¼ New Imperial), 2 sec. ... ... ... ... ... ... | 0 | 54⅕ |
| 2, S. Wallen (2¾ A.J.S.), 3 sec. ... | 0 | 55 |
| 3, F. Holmes (2¾ Douglas), 4 sec. ... | 1 | 3 |

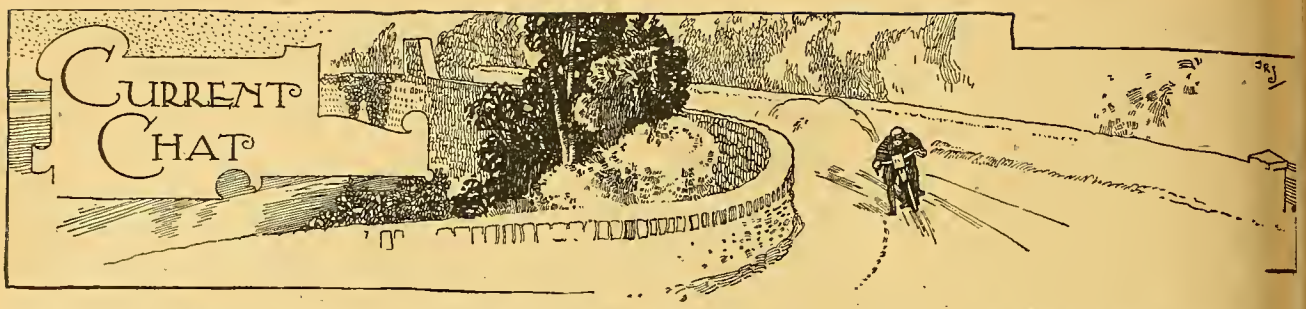
350 c.c. TO 600 c.c. CLASS (ALL TYPES).

| | H'cap time. min. | sec. |
|---|---|---|
| 1, A. A. Wayte (3½ Sunbeam), scr. ... | 0 | 44⅗ |
| 2, J. A. Adair (4¼ B.S.A.), 9 sec. | 0 | 46⅗ |
| 3, F. Holmes (4¼ Humber), 2 sec. ... | 0 | 48⅖ |

SIDECAR CLASS (UNLIMITED CAPACITY).

| | H'cap time. min. | sec. |
|---|---|---|
| 1, D. Allen (4 Norton), 5 sec. ... | 1 | 2⅗ |
| 2, H. W. Nesbitt (3½ Norton), 7 sec. | 1 | 3⅖ |
| 3, J. Holding (6 Enfield), 8 sec. ... | 1 | 14⅕ |

Despite the political situation the Dublin Club continues to hold successful and well-supported events, although some of the longer distance trials have had to be abandoned this year.



## Times to Light Lamps.

| | | | |
|---|---|---|---|
| May | 4th | .. .. | 9.25 p.m. |
| „ | 6th | .. .. | 9.28 „ |
| „ | 8th | .. .. | 9.30 „ |
| „ | 10th | .. .. | 9.33 „ |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### Heavy Fines Not Confined to Britain.

In the Borough Court of Durban motor cyclists exceeding the speed limit were fined £7 10s. for 30 miles an hour and £5 10s. for 29 miles; a lady motor cyclist who did 37 miles an hour had to pay £5.

### Watering Roads with Salt Water.

In East London, South Africa, considerable damage is done to motor cycles through the watering of the city streets with salt water, which is highly deleterious to mudguards and their fittings. It is also damaging to the enamel.

### Next Saturday at Brooklands.

Quite a good entry has been received for the race meeting to be held by the B.M.C.R.C. at Brooklands track at 2 p.m. on Saturday next. Attractive features of the event will be the "T.T." races, in which it is to be hoped some of the actual machines for the I.O.M. races will be seen on the track.

### Disappointing the Amateurs.

Amongst amateur riders disappointment is felt that the Amateur Road Race proposed by the Manx M.C.C. has been "turned down" by the A.C.U. A selection from the many letters received on the subject will appear next week.

### That Extra Brake!

At the conclusion of the proceedings at Windsor Guildhall recently, the chairman of the Windsor County Bench, Sir William Shipley, stated that in future, if so many cases concerning motor cycles which were not equipped with efficient brakes came before the bench, the magistrates would very probably increase the fine from 10s. to a much larger sum.

### Bad Roads Round West Hartlepool.

So serious has become the state of the roads around West Hartlepool that the secretary of the Hartlepools M.C. addressed a letter to 900 local motorists urging them to combine with the object of getting the roads put into order. A meeting was convened at which a resolution was passed calling the attention of the Durham County Council and other Councils involved to the appalling state of the roads leading to the Hartlepools, and urging that they should be put into proper condition.

## Special Features.

1922 SPEED POSSIBILITIES.
MOTOR CYCLES OVERSEAS.
THE SCOTTISH "SIX DAYS."

### Drive Carefully in Cambridge.

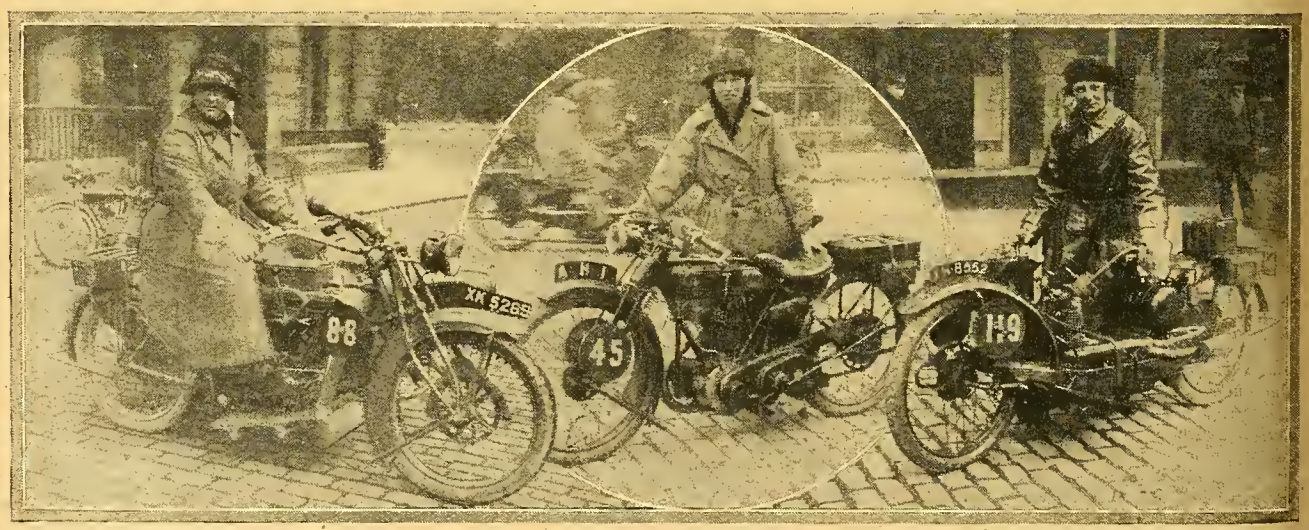
Motor cycles are immensely popular in Cambridge, but as the streets are narrow and, during term-time, are thronged with pedal cycles, riders should proceed with great caution. Traffic regulations are being strictly enforced.

### A Liverpool Picnic.

For the venue of the second annual picnic of the Liverpool Centre of the Cycle and Motor Trades Benevolent Fund, on June 7th, the Woodlands, Llangollen, has been chosen. Full particulars can be obtained from the Secretary, H. Rawnsley, 120, Duke Street, Liverpool.

### Parking Machines in Worcester.

Motor vehicles may now be left in certain streets in Worcester for short periods without arousing police objection, so we are informed by the A.A. The streets are: Shaw Street (south side), 15 vehicles; Trinity Street (west side), 5 vehicles; Queen Street (west side—between St. Nicholas Street and The Trinity), 7 vehicles; the Corn Market (near Public Hall when not being used), 2 vehicles; College precincts, 2 vehicles.



LADY COMPETITORS IN THE SCOTTISH SIX DAYS' TRIALS.
Mrs. Hardee (998 Matchless sidecar), Mrs. Knowles (349 A.J.S.), Mrs. Jansen (211 Ner-a-car).

### l Fields in South Africa?

Oil has been found in the Winterton strict, which, fortunately, is only six- en miles from the nearest railway.

### aleigh Extensions Completed.

To-morrow (Friday) the new works of e Raleigh Cycle Co., Ltd., at Lenton, ottingham, will be opened by Lord irkenhead. A special train will convey e guests from London.

### loists and Fine Weather.

Although Spring-like weather is not yet e order of the day, many more solo ders are to be seen than a couple of eks ago. Most of the soloists favour ghtweights of medium power, and two- rokes predominate.

### French Hill Climb.

The enterprising Western A.C. of ance is holding a hill climb on the 7th st., which will be open to all types of otor vehicles excepting lorries. There ill also be a gymkhana on the same day. ie organisers are L'Automobile Club de Ouest, 34, Place de la Republique, Le ans, France.

### Sunny Japan.

For the benefit of English and American otorists in Japan some rules affecting iving are printed in English. We give rewith a few specimens: "When a ssenger of the foot hove in sight, tootle e horn—melodiously at first, but if he ill obstacles your passage, tootle him ith vigour, express by workings of the outh the warning 'Hi! Hi!'" "Beware the wandering horse that he shall not ke fright as you pass him by. Do not plode an exhaust at him; go sooth- gly by." "Give space to the festive g that shall sport in the roadway." Avoid entanglement of dog with your heel-spokes." "Go soothingly in the ease-mud, as there lurks the skid- mon."

### pen Trial in Devonshire.

The route selected by the committee of e South-Western Centre A.C.U for the en trial on May 20th is a very sporting ie, and should attract a large entry. The art will be made from Exeter, and will nbrace the lovely Exe Valley and the xmoor hills. From Exeter the competi- rs will run to Crediton, after which ey will encounter Bickley Hill, passing rough Tiverton they will come to inkem Hill, and then on to Templeton, outh Molton, Rock Hill, and Barnstaple, here lunch will be taken. After lunch raunton and Coombe Martin will be sited, and then the famous Hunter's Inn ill will have to be negotiated. Passing arbrook Mill, Beggar's Roost, Countis- ury and Porlock Hills will be encoun- ered, after which the competitors will ouch the fringe of Minehead and pro- eed along the main road to Taunton, here they will complete the journey.

Rules and regulations were issued im- ediately after the meeting of the ports committee of the A.C.U., and pplication for same should be made to Ir. S. L. Ward, 5, Hammet Street, aunton.

### Fishy!

It is well-known that rain washings of a tar-treated road are apt to kill the fish in any river they may reach. A Joint Departmental Committee appointed by the Ministries of Transport and Agriculture considers that highway authorities should give preference to asphalt bitumen free from tar products for the treatment of roads draining directly into fishing waters.

### At the Start of the London-Edinburgh.

Members of the M.C.C. committee, competitors, and officials in the London-Edinburgh run will be made honorary members of the London Country Club for the day, and will be able to make use of the club for the purpose of getting light refreshments in the afternoon and dinner in the evening prior to the start of the run, which takes place on Friday, June 2nd, the day following the Senior T.T. race in the Isle of Man.

### American Records Cancelled.

All American claims for world's records in 1921 have been disallowed by the F.I.C.M., as the persons responsible have failed to realise that in the case of long distance records a standing start must be made, and in the case of the mile record, only the average speed after two attempts, one each way, is allowed to made, and in the case of the mile record, was made on a circular track, and it was therefore urged that the mean speed was not required, but the International Federation have insisted that all short distance records must be made in accordance with their regulations.

### Land's End-John o' Groats Abandoned.

In view of the impossibility of finding adequate accommodation for competitors in Scotland, or of finding a suitable date for the event, the End-to-End trial, which it was proposed to organise this year in celebration of the twenty-first anniversary of the M.C.C. will not take place.

### 217,427 Motor Cycle Licences.

According to the statement issued by the Ministry of Transport, the number of licences issued for motor vehicles from December 1st, 1921, to February 28th, 1922, show that there were during that period 201,667 annual motor cycle licences issued and 15,760 quarterly licences, making a total of 217,427. The figures published between January 1st to November 30th, 1921, showed that the total number of motor cycle licences issued was 357,359.

### French Trials Reporting.

This is how a bad rainstorm is described by a French journalist who followed the Tour de France. "After Aix heavy clouds pursue us. We try to escape them, but to no purpose. They fall on us, and it is a terrible deluge; torrents of water descend upon us, the rain which falls is cold, penetrating, punishing; it paralyses the bravest hearts. The nature of the surface is difficult. There are roads which are all stones, rough, jolts which provoke numerous short and violent oscillations, dangerous to the mechanism and to the wrists of the drivers. We reached Fréjus in a veritable lake of mud. The morning has been disastrous."

MODERN TRANSPORT MEETS ANCIENT CUSTOM.—Last week the Hocktide Court sat at Hungerford to elect the officers for the year; those elected are the Chief Constable, officers of the town, and the "tuttimen." The latter have the privilege of making a tour of the town and kissing all the girls they meet, giving an orange in payment for the kiss. As may be seen, the sidecar passenger qualifies for the golden fruit!

# A Motor Cyclist's Country Diary

## On the Question of Fogs in General with Notes on Live Stock and Open Gates.

*Here, flying loosely as the mane*
*Of a young war-horse in the blast;*
*There, roll'd in masses.*—H. MOORE.

POETS and painters have rhapsodised over the fleecy mist clouds, but the motor cyclist loves them not. They are worse than inky darkness, for they are impenetrable by the strongest lamp, they cling closer than a brother, they make us like unto the Father Christmas of the greeting card—and are altogether soul-killing.

To watch a rolling fog from the top of a mountain is fascinating—when the fog is in the valley below or enshrouding some distant peak; to be personally mixed up in one on a motor cycle is an abomination.

"Platoons of ducks slowly waddling to the green."

Those who live in the country and use their motor cycles to get to business in some neighbouring town have been greeted by the fog in their bedrooms, they have looked out of the window on to their own patch of the great round world to see if the said fog was as bad as yesterday, and have discovered it was worse. Then they have buttoned everything which would button, and set off on their journey, hoping that the meandering, unenterprising village cows will not be in the lane, that platoons of ducks and geese will not be slowly waddling to the green or duck pond, and that the school-coming children will have the sense to go to one side of the road or the other.

### Dogs, Fog, Pigs and Milk Carts.

All these daily possibilities past, there is the corner at which the dog always rushes out and which we have in vain endeavoured to kick, and there is the next corner at which we frequently find one or two pigs—apparently stone deaf, and bereft of both sight and sense—crossing the high road at the psychological moment we arrive. They are uncertain enough in blazing sunshine, but in the midst of a fog they are a risk no self-respecting accident insurance company would take. Sundry milk carts returning from the station, driven by boys with their hands deep in their breeches pockets, and whistling with such vigour as to endanger the retention of their front teeth and exclude all other sound, are also to be contended with. Altogether the ride from country to town in recent days has been a trial to those with nerves, even if we did go through "the Great War, daddy," and in those years take everything as it came, and with our "Where did that one go to, Herbert?" make a joke of things which carried death in their wake.

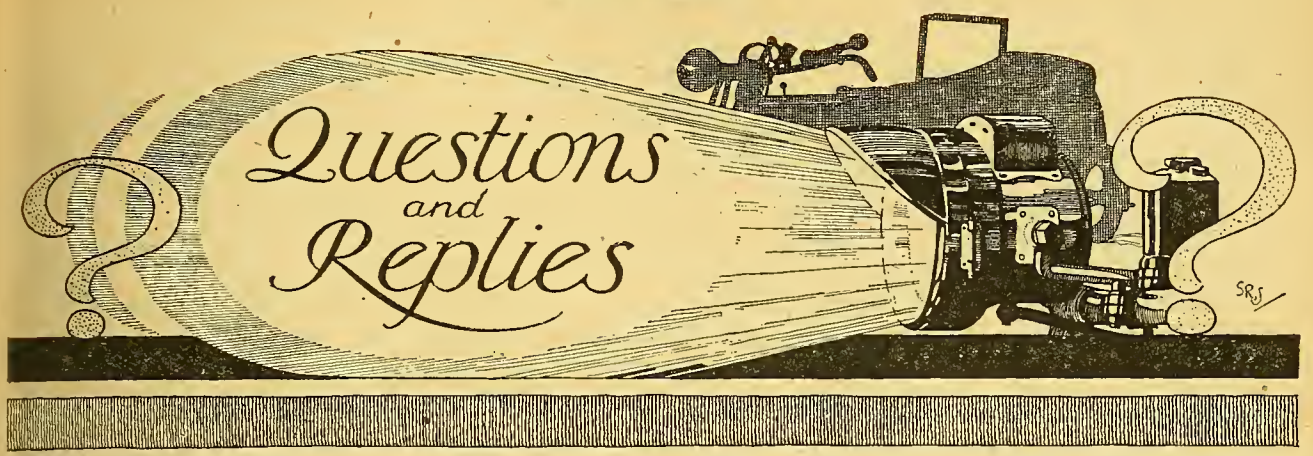
Only the other day the grandmother of a boy who will come into a big estate and a title confided in me thusly: "Stephen is bent on having a motor cycle. He'll probably get his way, too, . . . if he does, he'll be certain to be killed. They're so very dangerous, and he is so venturesome." I comforted her by saying I hadn't been killed yet and that the boy would be quite as safe on a motor cycle as on some of the young horses I'd seen him riding.

### Opening Gates.

There are a line of gates over a highway in Yorkshire along which several motor cyclists pass each morning. On each side are open fields with stock running in them. It is an inconvenience to the farmer if the stock get wrong—the gates are a daily inconvenience to the motor cyclists and others who use the road. The M.C.'s have come to an agreement that the first to reach the said gates will throw them open and leave them so for the benefit of those who follow, the last comer to close them. As in the case of gates out hunting, however, the last man always imagines that there is someone else to come. The result is, the farmer is furious.

Motor cyclists have to live their life in that district where folk are very locally minded and where fat sheep and bullocks, turnips and crops are the main topic of conversation. Consequently, with public opinion against them, they, as sensitive fellows, ask, "What should we do?" To fence off those fields would be an expensive undertaking, to dismount five times to open gates is so irritating as to upset the equilibrium of some M.C.'s (who do not salute the happy morn too cheerfully when there's snow on the ground or lakes in the road). The town motor cyclist knows "nowt" about these field gates over the high road, but we country cousins have much experience—and this is the year of grace 1922, and not the days of stage coaches, of toll bars, and Dick Turpin's Black Bess which could jump over the gates at a pinch.

J. FAIRFAX-BLAKEBOROUGH.



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### A QUESTION OF DATE.

Last year I purchased a motor cycle which was sold to me as a 1916 model (a friend was with me when this statement was made). I have lately made an exchange for another bike at a garage, and I stated at the time of exchange mine was a 1916 model, which was quite agreed upon on both sides. Now, after seven weeks, the man tells me he finds it is a 1914 machine. I have always believed it to be as I stated, and the machine was taken in exchange very readily at the time, and the man was perfectly satisfied with the bargain. He now says I must compensate him. Can he make me do so?—J.B.

From a legal point of view it appears that there was misrepresentation of the date of the machine, although this appears to have been of an unintentional character. At the same time, the buyer would be justified in claiming the difference in value between the two machines of the years stated, and you in your turn would be in order in suing for a like compensation from the person who sold the machine to you. In view of all the circumstances, however, it is very improbable that the buyer would succeed in an action against you, and before making any payment you should take legal advice locally.

### EFFECT OF IGNITION TIMING ON NOISE.

You once stated in a reply to a reader who complained of the noise of his machine that you were inclined to believe that his ignition was too much retarded. (1.) Will you please say why this should affect the noise? (2.) What is the cause of eight-stroking instead of four-stroking when running slow (machine not driving, but out of gear)? The engine four-strokes correctly on increasing speed (1914 4½ h.p. Singer single).—E.W.

(1.) At large throttle openings the noise of the exhaust is much more noticeable if the ignition is retarded; obviously with late ignition the charge in the cylinder is still burning when the exhaust valve opens, this resulting in a more violent discharge into the silencer or exhaust pipe. (2.) The trouble may be due to an excessively rich mixture, or it may be caused by an excessively weak mixture, due to air leaks which dilute the charge at slow speeds; the latter solution is less likely than the former, however.

## Important Dates.

**Mon., May 1st, to Sat., May 6th—Scottish Six Days Reliability Trials.**
**Sat., May 6th—B.M.C.R.C. Members' Meeting at Brooklands.**
**Sat., May 13th—Northern Centre A.C.U. Open Reliability Trial.**
**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs., June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 Mile Sidecar Race, Brooklands.**
**Fri., June 23rd, and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**
**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Wed., July 12th—French Grand Prix.**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**

### BALANCE OF A SINGLE CYLINDER.

Should the balance weights of a 3½ h.p. Rudge Multi be equal in weight to the connecting rod and piston, as I find mine only balance the rod itself?—T.T.

The balance weight should be equal to the weight of the rotating parts, plus approximately 0.4 of the reciprocating weight. The former consists of the crank pin, big end, and lower half of the connecting rod, and the latter the top portion of the rod with gudgeon and piston complete.

### ENGINE RELEASE VALVE.

(1) When kicking my 499 cc. Sunbeam over compression there is a noise from the rear right-hand side of the crank case like the escape of compression. It appears to come from what I can only describe as an arrangement similar to a screw-on greaser, except that it has a hole bored in the head. I don't think this noise should be there, but as I know very little about the engine I shall be glad of your help. (2) Recently the oil feed was disconnected, leaving only the 4 or 5 inch connection on the front of the crank case. Immediately the engine was turned over oil spurted up through the top of this in fairly large quantities, and I cannot understand the cause. I may say that for some time the glass sight on the oil feed has been blurred, when the engine is running.—J.E.P.

(1) The fitting you describe is a crank case release valve, and it would appear that this has become partially obstructed; you should remove and clean it internally, and make quite sure it is in good order. (2) If the crank case release is not working properly, oil will be blown back up the oil feed pipe and this may account for the obscuring of the sight feed glass. Attention to the release valve will no doubt put matters right. If it does not cure the fogging of the sight glass make quite sure that the latter is not cracked or insecurely bedded on its leather washers at top and bottom of its chamber.

### CHAINS NEED ADJUSTMENT.

Some five months ago I purchased an 8 h.p. Royal Enfield sidecar, and drove it direct from the works, having since covered many hundreds of miles, the machine giving entire satisfaction. About a month ago, however, the engine developed a rather pronounced "jerkiness" at slow speeds, and despite all endeavours I have been unable to rectify it. I have decarbonised it, ground in the valves, etc., without results. This "jerkiness" is quite irregular, and appears quite distinct from misfiring. It only appears at moderate pace and when accelerating. Can you enlighten me as to the cause?—J.Y.F.

From the symptoms you describe we suspect slackness in the driving chains rather than faults in the engine. Probably the high gear chain needs adjustment.

## READER'S REPLY.

### LACK OF SPEED.

Under the above heading in *The Motor Cycle* of the 20th ult., "J.S.R." states that at any speed over 15 m.p.h. his two-stroke develops a serious knock. I have a 1920 2 h.p. Levis, and I have exactly the same trouble. I have overcome it for a short time by having the big end tightened up. This I have had done three times, but in a very short time it is as bad again. Each time I took it to the garage I was told that the big end was not loose, but I had it done: it is the only thing (that I can find) that will stop the trouble. There is nothing wrong with the ignition or carburetter. If any other reason for this fault can be suggested I shall be very glad to hear it.—F.R.K.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.*

"W.W." (Ipswich).—Single-speed Levis, especially suitable for 6ft. rider.

"J.C." (Maghull).—Easy starting tips for 1920 4¼ h.p. B.S.A. or most suitable carburetter.

"J.G.T." (Yate).—Comparisons between two-stroke and four-stroke machines for long-distance riding.

"INQUISITIVE" (Ceylon).—1921 3½ h.p. dual-purpose Sunbeam: Maximum speed solo geared 4.9 to 1.

"R.A.R." (Rotherham).—Jet size and consumption with Binks and Amac on 8 h.p. Matchless-Mag.

"H.E.R." (Bradford).—4¼ h.p. Beardmore Precision sidecar.

"D.A.H.B." (Shorncliffe). — A.B.C.: Speed, reliability of valve gear, etc.; also 2¾ h.p. stripped sports A.J.S. at high averages.

"J.A." (Bradford).—4¼ h.p. and 7 h.p. James sidecars and 6 h.p. Bradbury-Grindley sidecar.

"G.B.B." (Coventry).—Makers of recommended tents for motor cycle camping.

"V.D." (Brighton).—2¾ h.p. two-speed Raleigh.

"S.H.S." (Southport). — 8 h.p. New Imperial sidecar: Especially gears and transmission.

"T.A.M." (Newport, Mon.).—Jet sizes for Binks on 4 h.p. Douglas sidecar.

"R.M." (Yeovil). — Morgan, popular model.

"F.L.B." (Manchester).—Any improved type of o.h.v. rocker mechanism on A.B.C.

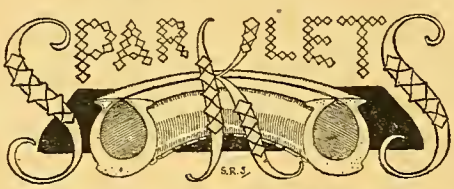
"F.H." (Maidstone).—Sit-easy tubular pillion seat; also 29in. × 3½in. tyres on Matchless.

"H.G." (Liverpool).—Volex dry battery lighting sets; duration of light, etc.

"A.E.C." (Kensal Rise).—247 c.c. two-speed Sports Levis with pillion passenger; also A.B.C. and A.J.S.

"PLUG" (Lemington-on-Tyne).—1921 3 h.p. two-speed Ivy.

"G.A.C." (Merthyr Tydfil).—Benzole on 7-9 h.p. Indian: Action on cork float. Particulars of any more convenient exhaust lifter.



### To Supersede the Copper Exhaust?

A process whereby steel or other pipes are given a coating of aluminium has been devised by Marsh and Wright, Victoria Street, Weymouth. It is specially recommended for exhaust systems.

### Competing on ex-W.D. Machine.

The award of a silver medal obtained by G. Kuhn in the Victory Cup trial has been amended to a gold. Kuhn rode an ex-W.D. Douglas, reconstructed by the Burlington Motor Cycle Co., Ltd., 7, South Side, Clapham Common, London, S.W.4.

### Dashboard Lighting-up Tables.

Small ivorine lighting-up tables suitable for fixing on the dashboards of sidecars or runabouts were offered gratuitously to motor cyclists some weeks ago by H. Taylor and Co., Ltd., 52-53, Sussex Place, South Kensington, London, S.W. The stock is not yet exhausted, and any applicant forwarding return postage will receive one.

### The Use of Enamels.

Manufacturing the well-known Robbialac motor cycle enamels is by no means the only activity of Jenson and Nicholson, Ltd., Stratford, London, E.15, for they make all manner of domestic enamels and varnishes, and have recently issued an instructive booklet on house decoration obtainable on remitting fourpence postage. Instruction leaflets on re-enamelling motor cycles and sidecars may be had on application also.

### Will Club Secretaries Oblige?

Particulars of competitions organised by motor cycle clubs are required by the Competition Manager, F. E. Baker, Ltd., King's Norton, Birmingham.

### Pedal-assisted Bicycles in Scotland.

Appointment as sole distributors of the McKenzie lightweights in Scotland has been given to Morris, Russell (Scotland), Ltd., 52, George Street, Edinburgh.

### Found on the Road.

On applying to Mr. J. Crawford, motor and cycle agent, Consett, the competitor who lost a lamp at Shotley Bridge in the Travers Cup trial on April 27th will have his property returned.

### British Products on the Continent.

Two of the principal events in Belgium this year, the Coupe de la Meuse and the Gillet Cup, have been won by British machines; the former by Ferdy on a Sunbeam and the latter by Vanneste on a Norton. Both machines were fitted with Bates tyres.

### A.C.U. Fixture List for 1921.

Copies of the list of A.C.U. fixtures and open trials for this year may be obtained from 83, Pall Mall, London, S.W.1, price sixpence. It also contains a list of the clubs affiliated to the Union, with the addresses of the secretaries.

### Local Machine's Win at Staxton.

In the recent Staxton Brow hill-climb the winner in the 275 c.c. class was mounted on a 249 c.c. Spa-Jap, and not on a New Imperial as previously announced. The machine is produced locally by the Spa Motor and Engineering Co., Scarborough.

### Catalogues Received.

John Marston, Ltd., Sunbeamland, Wolverhampton: A catalogue full of information relating to Sunbeam machines.

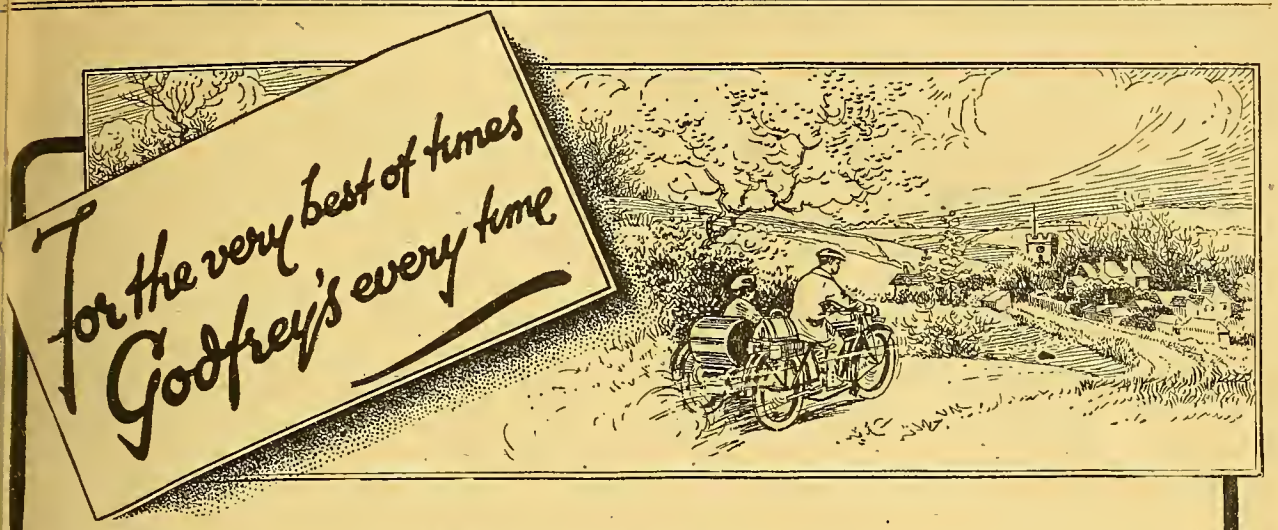
Joseph Kaye and Sons, Ltd., 93, High Holborn, London, W.C.1: A catalogue giving particulars of the famous Kaye oil cans.

The Coventry Eagle Cycle and Motor Co., Ltd., Foleshill Road, Coventry: Folder describing Coventry Eagle super-sports models.

A. W. Gamage, Ltd., Holborn, London, E.C.1: "Everything for the Motorist." A considerable section of this publication is devoted to accessories of interest to motor cyclists.

The Monopole Cycle and Motor Co., Ltd., St. Mary's Street, Coventry: Catalogue giving prices and particulars of the Monopole range from the 2½ h.p. single-speed two-stroke model to the 5-6 h.p. sidecar outfit.

Brown Bros., Ltd., 22-34, Great Eastern Street, London, E.C.2: Particulars of the Vindec lightweight two-speed two-stroke, the price of which has been reduced to £55, and of the Vindec 8 h.p. sidecar outfit, which is now £160, including spare wheel and tyre. Details of Duco sidecar chassis and bodies are also given.



**IF YOU KNEW** that one agent made a practice of lining the tool bags of all his motor cycles with a **£5 note**, would it influence your order ?
Presuming such a practice to be quite legitimate (which, by the way, it is not) and other things being equal, of course it would. Why ? "Because you would obtain greater value for your money."

**SERVICE** Now the "lining" of each machine at Godfrey's is the Bank Note of Service, the value of which is not to be measured in units of 5, but, like the hypothetical bank note, is good for any length of time.

Service, with Godfrey's, is a fetish, arising doubtless from the fact that the members of the firm are old competition riders and know by practical experience the needs of motor-cyclists. And so every department of Godfrey's business is organised with one end in view—Prompt and Efficient Service.

**EXCHANGES** Godfrey's are prepared to take your present mount in part exchange and will quote you an allowance price on receiving full particulars.

**CREDIT TERMS** Should your capital be locked up you may desire to take advantage of credit terms. Write for particulars of Godfrey's System. Our charge is 4 per cent. (except in a few cases where manufacturers have special rates). One quarter down and balance in 12 equal monthly payments.

**SPARE PARTS** In the course of the last few years we have built up a large mail order business. If you have any difficulty in obtaining spare parts, try Godfrey's. We carry full stocks of spares for B.S.A., Indian, Levis and Scott Motor Cycles.

**REPAIRS** Our works at 14, Miller Street, Camden Town, is staffed by experienced mechanics. Should your machine need overhauling, write direct. Estimates given.

To sum up, neither the motor-cyclist nor the prospective motor-cyclist need have any hesitation in putting our Service to the test. If we can be of any assistance to you quite apart from any obligation to purchase we shall welcome the opportunity.

**WE CAN GIVE IMMEDIATE DELIVERY OF THE FOLLOWING 1922 MODELS:**

## B.S.A., INDIAN, LEVIS, SCOTT, TRIUMPH,

## SIMPLY A MATTER OF PRESSING THE BUTTON—

**THE RUNBAKEN Spark AMPLIFIER AND TESTER ! !**

(Patd. 13980)

This highly finished accessory is quickly fitted to any type of plug, and with its aid, besides giving the generally recognised advantages of an extra spark gap in the high tension current, has also the following advantages :

1. Confirms Magneto and High Tension Wire O.K.
2. Definitely enables you to see a spark take place at Plug Points.
3. Whether sparking regular or not.
4. Whether points sooted or insulator cracked.
5. Indicates "shorted" Plug.
6. Will cut out cylinder for testing purposes.
7. Acts as thief-proof device.
8. Never necessary to take out Plugs except when faulty.

**NO MORE PERPLEXITY**

THE BRITISH TRANSFER PRINTING CO., LTD.,
Quinton Works, COVENTRY.
London: Dorset House, Tudor St., E.C.4. Manchester: 199, Deansgate.

# MISCELLANEOUS ADVERTISEMENTS.

## PRICES.

ADVERTISEMENTS in these columns—first 12 words 3/–, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to ILIFFE & SONS Ltd., and crossed ____ & Co. Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

## NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4. *Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes: in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."*

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

## DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the depositor. Carriage is to be paid by the buyer, but in the event of no sale each party pays carriage one way, the seller takes the risk of damage in transit. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6 and on all transactions over £100, 1%. All deposit matters are dealt with at Dorset House, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Iliffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally desirous, but have not advised us to that effect.

## SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the silence as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

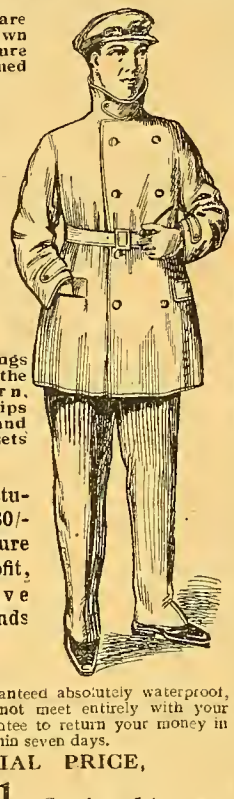
MANUFACTURERS' STOCK

MAKINKOT BRAND

*TO BE CLEARED.*

Fawn double texture, interlined rubber,

MOTOR SUITS



THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped, making these absolutely waterproof

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs.

The Motor Leggings are made on the trouser pattern, fastening with clips and straps, and have wind gussets to leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

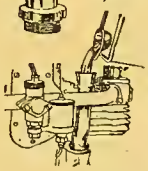
# By first post without fail

**Any spare part for any model Douglas or Williamson from 1908 upwards. Being on the spot I can get you anything you require, and guarantee not to disappoint you. Douglas Repairs completed, including a complete rebuilding and enamelling in seven days.**

**A FEW SPECIALITIES**

for your convenience. Filler, Funnel and Compression Reducer combined for 4 h.p. Douglas. The original patent. Permits the last drap of oil to be got out of the can. Sump refilled without soiling the hands. Fitted in 5 minutes, substantially made, and lasts a lifetime. **10/6.**



**PATENTED TWIN RINGS**

15 per cent. increase in power, hold compression indefinitely, prevent carbonising, reduce oil consumption and reduce friction. All the racing men and trial riders are now using them. 4 h.p., **1/8**; 2¾ h.p., **1/6** each. Insist on having them fitted.

**A NEW TWIN RING PISTON**

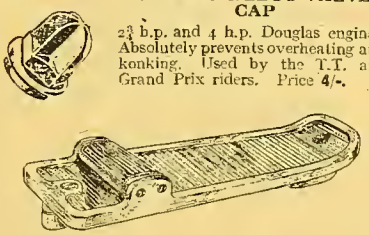
Scientifically designed to prevent distortion. Four strengthening webbs and radiating fins, gudgeon pins supported correctly. Much lighter than standard pistons, yet double the strength. Piston with rings and gudgeon pin, **14/6**. J.S. writes: "I fitted the new pistons, and was astonished at the speed and power increase."

**ZOOM! ZOOM!!**

Are you Zooming it? This lovely exhaust pipe gives a lovely Zoom note and provides an expansion chamber many times the cylinder capacity; it silences without back pressure. The most efficient system yet devised; over 2,000 sets already fitted. Beautifully finished in polished copper plate, **30/-**. Nickel plated, **33/6.**

**THE ORIGINAL AIR-COOLED ALLOY VALVE CAP**

2¾ b.p. and 4 h.p. Douglas engines. Absolutely prevents overheating and konking. Used by the T.T. and Grand Prix riders. Price **4/-**.



## The Tony Combined Footboard and Footrests (*Patented*).

Made in burnished aluminium; polished edge, non-slipping surface, solid rubber pads, ideal riding positions and keep the boots clean. Adds greatly to the appearance of any Douglas. Substantially made and unbreakable. Price **30/-** per pair.

An Opportunity for Enterprising Agents.

THE MOTOR CYCLE

Insurance Policies

IMPORTANT AGENCY EXTENSION

SERVICE to your clients should include the best and most reliable Motor Cycle Insurance Agency it is possible to obtain.

The Policies you recommend should carry a name that inspires confidence and gives an assurance of prompt and generous settlement of claims.

From your own point of view it is desirable that you should represent a company that enjoys the highest reputation among the motoring public, and be able to offer policies that are known to give complete and comprehensive cover.

**An extension of the Agency and Service arrangements for "The Motor Cycle" policies is now being made, and applications are invited from agents who realise the value of specialised experience and the importance of maintaining the goodwill of their clients.**

Here is your opportunity of handling policies that every motor cyclist knows and the value of which he fully appreciates.

WRITE TO-DAY FOR FULL PARTICULARS.

PINNACLE Sidecars for comfort, durability, and elegance, a model for every purpose. See displayed advertisement.—W. G. Fearn and Co., Albion Works, King's Cross. [4563

COMFY Sidecars, strong underslung chassis, coach built body bulbous back with locker, quick detachable fittings, Clincher tyre; price 18 gns.—Comfy Sidecar Co., Leytonstone. [3079

BRAND New Henley Coachbuilt Sidecar, suit 4h.p., mat, apron, slightly shop-soiled, 14 gns.; nearly new Derwent coachbuilt sidecar, £9/15.—110, Upper Richmond Rd., East Sheen. [4206

WATSONIAN R34, deep green, specially strong, 5-point attachment chassis, stream line, lamp, windscreen, perfect; £15; tyre unpunctured; offers.—Nisbet, Easington, Weybridge. [4698

TORPEDO sidecar, underslung, 4-point attachment, £10; sidecar outfits for Douglas, Triumph, P. and M., etc., in stock; let us quote you.—De Cort and Flynn, 39, Essex Rd., London, N.1. [2757

WILLOWBROOK Royal Leicester Sidecars, smartest designs, first-class finish; prices from 17 gns. Write for catalogue. Repairs undertaken, hoods, wind screens, etc.—The Willowbrook Motor Co., Leicester. [0335

SANDHAM Elite, bulbous back, adult and child's bucket seat, new Dunlop heavy tyre and tube, 2 new windscreens, all as new; £24/10 complete, or chassis only, £12/10. — Kitson, Electricity Works, Twickenham. [3956

LANCASTER Sidecars.—Superb coachbuilt sidecars complete from 14 gns.; bodies only from 4 gns. A good selection in stock. Call and inspect.—The Lancaster Motor Co., 158, Norwood Rd., West Norwood, S.E.27. 'Phone: Streatham 2541. [3328

PARAGON (patent) Folding Sidecar saves storage, has 7 years to its credit, and has proved itself absolutely reliable. Fits any make of motor cycle, and, when folded, combination will pass through a 30in. doorway. Call and see it demonstrated.—Wincycle Co Ltd., 236, High Holborn, W.C.1 [0388

PLUS One Sidecars are supplied in any colours for fitting to any make of machine; Millford chassis if desired; bodies only are supplied, and fit A.J.S., New Imperial, Royal Ruby, B.S.A., James, Indian, Excelsior, Harley, Reading-Standard, Henderson. Do not forget one of these outfits carried 2 fully grown adults through the London-Exeter run.—W. E. Line, late Coppen Allan, 89, Gt. Portland St. Langham 1601. [3515

LIGHT Car and Motor Cycle Engineering Co., Ltd. —New chassis, light type, £7/7, complete with all fittings. Special coachbuilt body to suit, £5. Heavy chassis, new, with all fittings, £10/10. A number of Millford chassis, in excellent condition, from £4/10. Several Millford chassis, with renovated bodies, in new condition, £9.—26, Tulse Hill, Brixton (half minute from Brixton Skating Rink). Phone: Brixton 1292. [4463

OLD Man Hep has 1,000 Douglas underslung chassis, renovated and complete, to suit all makes of machines, for £5; or fitted with a brand new Douglas type bulbous backed body, for £10/10 (these bodies are upholstered with good quality Rexine, but require a last coat of paint); this has been left for travelling on rail; send for photo, enclosing stamp. We cannot be beaten for our prices. 'Phone: 1958 Brixton. (See Body column.)—19, Wilcox Rd., South Lambeth, London, S.W.8. [5055

JONES' Garage, Broadway, Muswell Hill, N.10, for all makes of new and second-hand sidecars from £7/10 complete. Montgomery new sports, £23/10; also touring and featherweight models. Langford picnic spring wheel models, new, £29/15 only; Harley and Indian specials at £27/10. Large selection. Also special mudguards to fit to body, with brackets, 15/-, any colour, no rattle. High-class bodies from £6/15.—'Phone Hornsey 2917, or call. Open all Saturday. Also at 4, Woodside Parade, North Finchley, N. [4623

P. and M. chassis, complete with new bulbous back body, new guards, fittings, etc., £14. Millford chassis, complete with new bulbous back body, new guards, fittings, etc., for Triumphs, B.S.A.'s, etc., £15. Douglas chassis, complete new bulbous back body, £15. New underslung chassis, complete with new bodies, from £16/10. Lightweights, all complete, brand new, from £11/10. Write for particulars. Extended payments.—Robini Manufacturing Co., 1 and 3, Tulse Hill, Effra Rd., Brixton, S.W.2. 'Phone: Brixton 1585. [4452

## RUNABOUTS AND CYCLE CARS.

LIGHT Car Chassis, complete, less engine, tyres, channel section; £10/10.

TUBULAR Chassis, 3-wheeler, wheels, part steering, springs, axles; £3.

SPECIALLY built 6-8h.p. Riley, air-cooled engine, powerful, run little, mechanical valves, beauty; £11.

3-SPEED Reverse Gear Box, splendid condition; £5; offers considered; 9 to 5.30, Sats., 12.—Beecroft, 14, Meanwood Rd., Leeds. [3287

## The T.T. and the Public.

AT this period of the year it is not uncommon to find in our letter bags a small proportion of missives protesting against the Tourist Trophy races, on the grounds that they are valueless to the general public. The fact that there have been fewer than usual of these communications this year may perhaps be regarded as indicative of a more general realisation of their importance.

Only superficial observers imagine that the race is run purely for advertisement and immediate gain, and it is safe to say that not a single firm which enters for this classic event fails to learn some lesson of value which is later reflected in the standard product.

There are few solo mounts of high repute which do not owe a large measure of their success to lessons learned in the T.T., and the Isle of Man course is ideal for developing the very features which the tourist most appreciates. No motor cycle stands a chance of success over the sinuous course unless it steers perfectly, accelerates rapidly, and is fitted with first-class brakes. The necessity for large tyres, sound gears which change easily, and practical transmission, have already been proved. The effect of the long race on engine design, both as regards cooling and lubrication, has been of incalculable benefit, and still further improvements in these respects are likely to accrue as a direct result of the forthcoming races.

In addition, the Junior event has been mainly responsible for the high state of efficiency to which the modern 350 c.c. mount (perhaps the most popular solo machine of to-day) has attained. The Lightweight race, so diligently fostered by *The Motor Cycle*, has grown considerably in importance, and already the 250 c.c. engine has been brought to a state of perfection which would have been considered almost impossible only a few years ago. It is largely through the Tourist Trophy races that motor cycles are perfected and power output increased apace from a given cubical capacity. Thus the cost of road transport is being steadily reduced as smaller engine sizes become practicable.

## A First-class Utility Mount.

WHILE there is a steady demand for motor cycles of the very highest grade, a survey of general conditions indicates that low and moderately priced machines are the ones most sought after. This is as might be expected, for a large number of people are unable to afford just those few pounds extra which are required to purchase the very best. Very considerable efforts have been made by manufacturers to reduce their prices to the lowest point, and figures are now stabilised. Is there a way of giving the enthusiast a chance of buying "the best" at a reduced figure? Quite frequently it is the enthusiast who is most hardly hit, for he is often impecunious, and every shilling makes a difference to him. He will go without many luxuries in life to obtain a first-class mount, and also forgo a number of luxuries on his machine provided he can obtain the essentials he desires. It might be possible to produce a standard first-grade motor cycle without front stand, without carrier, with slightly less elaborate chain guards and mudguards, and with foot rests instead of aluminium boards, and thus effect that reduction which brings a machine within the reach of thousands more prospective buyers. This is no new idea, and some few manufacturers have already adopted the notion, selling the resultant product as a sports model. But the idea seems capable of expansion. The best of everything and no fitting which is not strictly necessary should be the motto of any manufacturer attempting to satisfy the call for a first-class utility mount.

An index to the advertisements in this issue will be found on the page facing the back cover.

BY IXION

## A Chiel Takin' Notes.

THE croakers say that the crag-and-chamois type of trial will shortly become moribund, as happened to pedal-cycle competitions thirty years ago. I don't think so. Why? With pleasure. Last Thursday I hied me to the nearest main line railway station. Travelling per o.h.v. Triumph, I naturally arrived well before the train. Standing in the booking hall I spotted two neighbours of mine—public school boys aged perhaps seventeen or so. They arrived per baby two-strokes—and to judge from their slippered feet, dishevelled hair, and other clues which my Sherlock Holmes brain read like an open book, they had not yet breakfasted. They had come to collect their weekly copies of the Blue 'Un off the local newspaper train at 8 a.m. rather than wait till the local newsagent handed in the papers at their own door (ten miles away) four hours later. In other words, the growing manhood of the country presents the pastime annually with thousands of recruits whose main obsession is to get hold of some sort of motor cycle and smash it up in sporting events. So the freak trial may very well survive many years after it has ceased to serve any utilitarian purpose.

## An Appeal to Chivalry.

ONE of our fair readers makes an irresistible appeal to my chivalry. Will I please put a couple of anatomical pointers to designers of drop-frame machines intended for feminine riders? The first is that they should ascertain the mean, normal, or average length of the feminine leg? They will find it is appreciably shorter than the male. They fail to allow for this in their frame layout, with the result that the fair *motorcycliste* can only straddle her mount on tiptoe. I am credibly informed that there are ladies on the stage who can remain on tiptoe by the hour, and indeed acquire much wealth and fame by demonstrating this ability. But my correspondent is not an Adeline Genée, and after a few seconds of the exercise her machine generally collapses sideways with a sickening thud. Secondly, will the aforesaid designers kindly set their sisters astraddle the machines they design, and note where the lady's ankles come. According to my correspondent the odds are several billions to one that the ankle will be adjacent to the knobblesome end of the footrest or footboard spindle. Let the designers then reflect that a slim feminine ankle, clad in filmy stockings of a champagne tint, is adorable; but that a thick ankle, reminiscent of the fetlock of a drayhorse afflicted with glanders, is a noisome object. Wherefore every fair motor cyclist wisely wears the thinnest stockings obtainable. So let the designer attire his own ankles in similar stockings, and then try to rivet over the end of the aforesaid footrest spindle with his ankle bone. He will suffer such acute pain that he will promptly alter the design. 'Nuf sed?

## Just One More.

I AM glad to find that the ladies are sitting up and taking notice. Here is another epistle in one of those large, sprawly hands. It is almost as anatomical as the last. Our fair reader has a baby two-stroke. It has a brake. The brake is operated by a pedal. The business end of the pedal terminates in a disc. The disc is the size of a threepenny-bit, as the designer makes a great point of saving weight. The lady also has a foot. It is shod in a boot. With a heel. The heel is equal in area to a halfpenny. In the interests of grace and comeliness.

Yesterday this reader found herself undecided whether to ride into a narrow gap between two cars. Because a motor bus was approaching the gap from the opposite direction. Meanwhile, a Brough Superior was approaching at speed from astern—straight for her bustle. So with her heel (see above) she felt for her brake pedal (see above, as before). The heel did not find the brake pedal in time. Luckily, the machine was insured. The lady refuses to wear shoes with larger heels. So—obviously—the trade must fit brake pedals with larger plates. And why shouldn't they?

## Gadgets—Their Weight——

A NUMBER of clever people who attempt to transfer money from our pockets to theirs do not always pay sufficient attention to the weight or dimensions of their gadgets. On the one hand it is folly to burden a lively and manageable motor cycle with half a hundredweight of extras, and yet there are plenty of machines on the road which are disfigured to this tune. On the other hand, it is a physical impossibility to squeeze into two pannier bags all the outfit which some accessory makers consider it desirable we should carry. Here are a few examples, good, bad, and indifferent, all of which are recommended to me by various people for use on my sports single:

| | |
|---|---|
| Two fishtails for exhaust pipes | 5 lbs. (Absurd!) |
| Chain rivet extractor ... ... | 3½ oz. (Excellent!) |
| Ditto (another make) ... ... | 16 oz. (I think not!) |
| Electric hooter (*sans* battery) ... | 2 lbs. 7 oz. |
| Variable jet, with control ... | 15 oz. (Worth it.) |
| Mechanical oil pump (complete) | 2 lbs. (Ditto.) |
| Spare bulb case ... ... ... | 3¼ lbs. |

*Ixion's "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.*

**Occasional Comments.—**

These few trifles tot up to nearly 15lb. The catalogue of many a rider's gadgets includes a dynamo, two hooters, a mascot, two or three club plaques, a spare tube and case, a speedometer, and possibly several other odds and ends. Many of these extras will be seen figuring on baby two-strokes. How can we expect a designer to rack his brains in reducing the weight of his machine when he beholds his customers recklessly piling on heavy stuff with both hands? He will naturally conclude that we don't care a split-pin what she weighs.

### ——and Size.

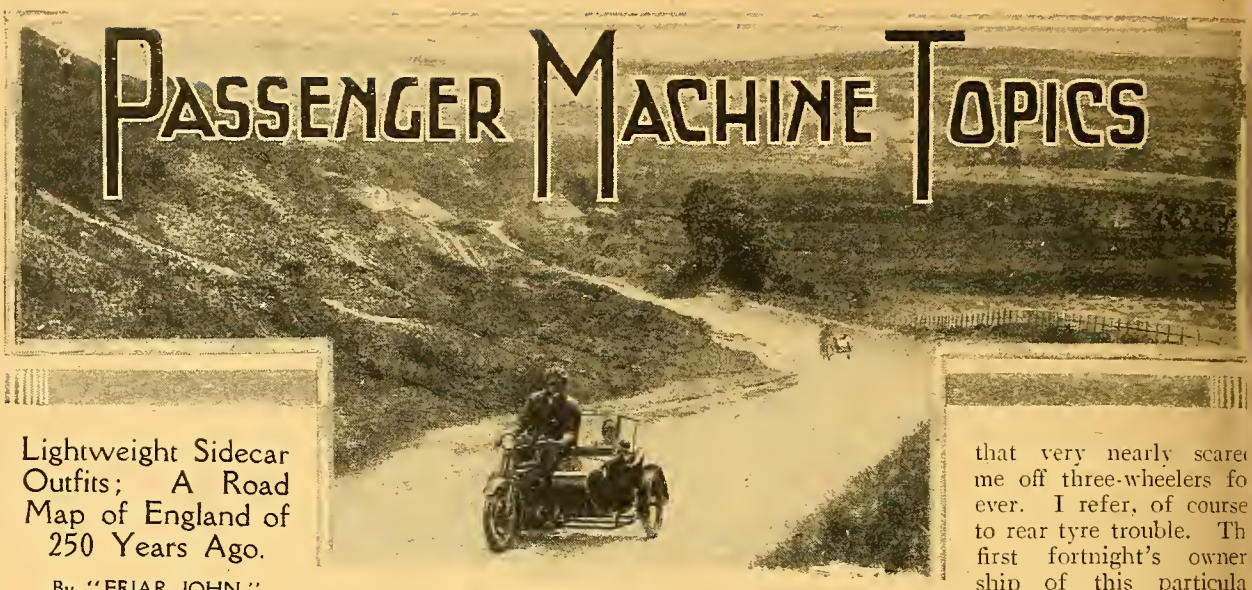
ONLY less important is the size of these gadgets. One well-known rivet extractor, when packed, occupies a space $4\frac{1}{4} \times 3 \times 1\frac{1}{4}$in., whereas one I carry when dismantled consists of one bit $1 \times 1\frac{1}{4} \times \frac{3}{8}$in. and three tiny parts which will slip in anywhere. The only decent carrier for spare electric bulbs which I have seen is designed exclusively for sidecar work, being a cylinder $5\frac{1}{4}$in. long $\times$ $2\frac{3}{4}$in. in diameter. In the course of a year I receive numerous accessories which I should be glad to carry on the road, but which are eternally condemned to a clip on the garage wall.

### Wanted a Tyre Lever.

A CORRESPONDENT remarks with some justice that the steady increase in the size of motor cycle tyres is creating a demand for compact but powerful tyre levers. For twenty years, as he states, motor cyclists have been able to make shift with ordinary cycle tyre levers, of which the trio of "one-minute" instruments have been easily the best. Most of the 1,000 c.c. machines equipped with large tyres are attached to sidecars, with their facilities for storing a set of car size levers if desired. Nowadays quite a number of solo machines are shod with 3in. covers, practically the equivalent of the 80 mm. car tyre, which no owner or mechanic would dream of tackling with his fingers or a 4in. lever. This reader ran over half a bottle on his first outing with 3in. tyres, and was quite unable to remove the cover until a passing car owner took pity on him. I suggest that the machine with 3in. tyres needs a longish pannier bag, in which a set of powerful levers can be packed.

A FAMOUS TEST HILL IN THE SCOTTISH TRIALS. A fine panorama from Amulree, showing Armstrong Graham on his 269 c.c. Harper Runabout. This little machine, which created great interest, made a good climb. D. Bell (800 c.c. A.J.S.) who is seen following, made light work of this once-dreaded gradient.

# PASSENGER MACHINE TOPICS



## Lightweight Sidecar Outfits; A Road Map of England of 250 Years Ago.

By "FRIAR JOHN."

A READER said recently in the correspondence column, that he had accomplished 5,000 miles on a lightweight outfit without any trouble. Such a testimonial entirely unsolicited is a tribute to an increasingly popular class of machine, even though the record is nothing unusual. It adds to that popularity and brings the merits of the class before the public in the same way as Eric Williams' run in the Victory Cup trial did when he accomplished 41 m.p.h. at Brooklands after a gruelling test on several hills on a 2¾ h.p. sidecar. So long as weight in the shape of heavy hoods, luggage carriers, spare wheels, and the like, is not piled on to these light sidecars they will continue to find a ready market. The upkeep and original cost of a 2¾ h.p. two-stroke outfit are half that of a completely equipped 5-6 h.p. sidecar, and as values are becoming more stabilised and money more valuable, so the cheap outfit will loom as a possible purchase to many who have refrained up to the present from investing in a sidecar.

◈ ◈ ◈ ◈

ONE of *The Motor Cycle* Press photographers covered nearly 12,000 miles last year on his sidecar: in one week recently his mileage was 660. In this distance he had one involuntary stop; yet one frequently hears statements from four-wheeler plutocrats, and also men who ride nothing but solo mounts that the sidecar falls short in reliability compared with a car. The sidecar outfit is as reliable as a car providing it is sensibly shod; it must be acknowledged the biggest percentage of roadside stoppages have in the past been caused by punctured tyres, but the folly of fitting undersized tyres has long been recognised, and this recognition, together with the immense improvement in belt and chain manufacture, has reduced roadside stops to a minimum.

◈ ◈ ◈ ◈

APROPOS of tyre trouble, last year I drove a Morgan for many thousands of miles, and eventually laid one bogey low, a bogey, I must admit, that very nearly scared me off three-wheelers for ever. I refer, of course, to rear tyre trouble. The first fortnight's ownership of this particular de luxe model was purgatory. I started every ride—after my first 300 or 400 miles—in mortal terror of a sudden hard and ominous bumping of the rear wheel, so persistent was the mysterious deflation of the rear tyre. After taking the wheel out several times on the road—an easier job than many pessimists would have us believe—and finding no puncture whatever, I naturally concluded that the creeping tyre must have caused the trouble whilst on its illegitimate journeying round the rim in spite of security bolts. It had, of course, stretched the tube at the valve, letting out the air without splitting the rubber. On discussing the matter with Mr. H. F. S. Morgan, he said the Leosco "tube saver" would remedy the trouble, and afterwards sent me one to try. From the moment of fitting it I was immune from tyre bother, not even having a puncture whilst the machine was in my possession. I believe all Morgans are now fitted with the band, but the tip is of such real value, not only to Morgan owners but to owners of heavy sidecars, that it is worth repetition.

◈ ◈ ◈ ◈

THERE is little doubt that the originator of the T.O.M. windshield has had more than one thorough soaking whilst driving in the face of heavy rain—it is so purely utilitarian. But this device, although not handsome, is rather less forbidding than the metal shield.

Legshields, which keep the rider free from mud and create a forced draught of air upon the cylinders, are the first part of the equipment. These shields do not rattle and are quickly detachable. The remainder of the device is a complete shield made of twill, which will keep the driver of the motor cycle almost as dry as the passenger in the sidecar.

A small aero windscreen is mounted on the top of two uprights which extend the shield. The model illustrated is fitted to a 4 h.p. Triumph, but a rather improved form was fitted to a Harley-Davidson, which has hand muffs incorporated. Another advantage of

**Passenger Machine Topics.—**

the shield is that if the machine is left out in the rain the whole fitting can be hinged backwards to cover the top of the tank and the saddle, since the supports are pivoted on the top tube.

The T.O.M. windshield can be obtained from the T.O.M. Syndicate, c/o Sir Walter Townley, K.C.M.G., 3, Temple Avenue, London, E.C.4.

ON the last day in April I drove my sidecar to that lovely stretch of the Thames between Staines and Windsor. It is an uncommon bit of roadway, running as it does close to the riverside for a mile or so. Stationed well from the road, I watched the hundreds of motorists pass by, and saw but one knock-kneed outfit. I say "stationed well from the road," for several thoughtless individuals had parked their machines on the exceptionally narrow road itself, causing trouble and real danger to passing cars and motor cycles.

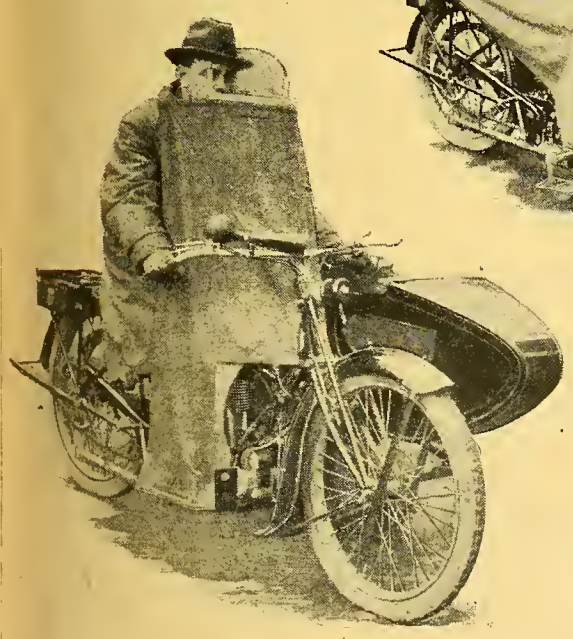
The most noticeable thing in connection with the passing sidecars, and perhaps the most commonplace, was the number of passengers carried. Two, three, four, five and six, I saw accommodated on various outfits, and truly remarkable was the ingenuity displayed in "packing." In one instance a laughing boy of eight or so sat straddled across the tank in front of the driver, another boy was on the carrier, the mother and yet another kiddy occupied the sidecar. This must have been the outfit that carried six up, but I cannot recollect how the other youngster was disposed—but it was a single-seater sidecar and a 4 h.p. Triumph machine that bore valiantly this cheerful load of humanity. Yes, just as happy were they as members of a big Daimler saloon that rolled by at the same time, an occupant of which was a painted lady smoking a cigarette in a foot-long ivory holder, aye, or even a prince who had passed by in a landaulet just before. Truly all the world was awheel.

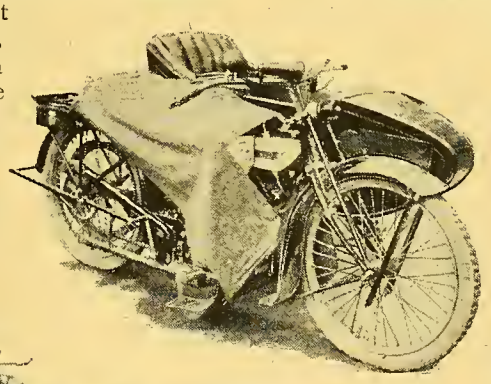
I must record also the unique sight of a daintily furclad lady seated in a small dicky seat, with a child (also dressed in black fur with a touch of crimson somewhere) occupying the big A.J.S. sidecar. Why? Of course my passenger was very interested, and so were many other people. "I ask you," was one pertinent remark that floated to me from a group nearby. The only answer I can find is that the lady must have liked it.

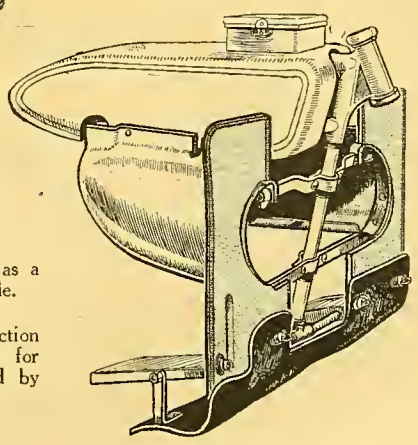
VOLUMES have been written on the romance of the road, and writers still endeavour to say things about it without appearing trite or poetical. "The great open road," the "gay free road," are expressions which have now grown hackneyed. But even matured beings who love the road—and what a fascination has the highway—have to restrain themselves when on the romantic subject of great highways, especially on a fine May morning when the machine is running well and the road—probably an old Roman highway—has a surface like a billiard board.

There is nothing poetical, however, in the "Story of the Road Book," the first part of which was published in *The Autocar* of April 29th; but it is a story which will interest every sidecarist. The author speaks of the "Road Books of Cæsars," and touches on the evolution of the road guide up to the time of the famous "Britannia" of Ogilby's, published in 1675. Intensely interesting are the details of Ogilby's survey. It appears that he "perambulated" all the roads he dealt with, measuring them to the statute mile with his "wheel dimensurator." But the beauty of this old guide—it weighed 10½lb.—is its engraved strip maps showing "heaths and woods that have long disappeared," the gibbets and gallows of the roadside, and the "smiths' shops," which were the equivalent in those days of our garages.

This story of the "Britannia" is a romance of the road indeed and worth reading.







(Left.) When the T.O.M. windshield is in position no interference with the engine cooling is caused, for there is an opening through which air is admitted to the engine.

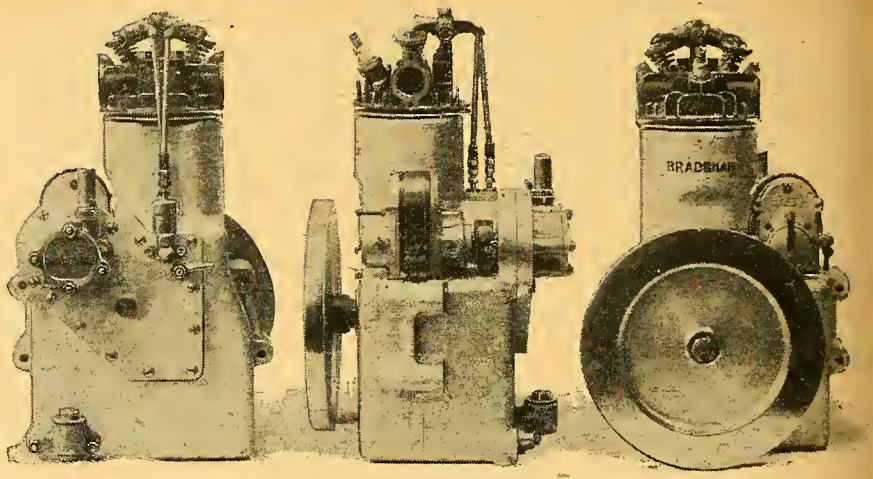
(Top.) Utilising the screen as a protective cover for the saddle.

(Right.) Complete protection from mud and mechanism for the rider's legs is provided by the lower part of the shield.

# OIL COOLING AND ITS MERITS.

## Notes on the Construction and Performance of the 350 c.c. Single-cylinder Bradshaw Engine.

IN the minds of one section of motor cyclists there appears to be some mystery in connection with oil cooling. If these notes succeed in dispelling such notions they will, at any rate, have accomplished a part of their object, for the 350 c.c. Bradshaw engine is as simple and as straightforward a piece of mechanism as can be imagined.

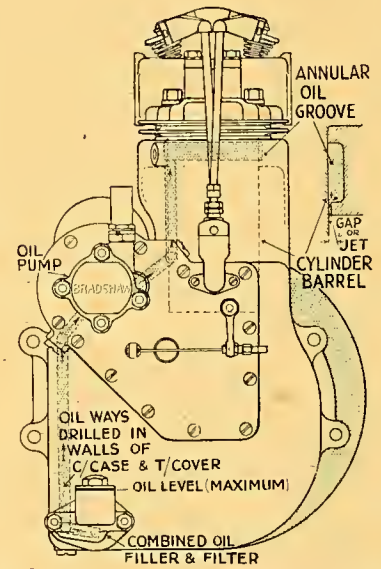


Three elevations of the 350 c.c. Bradshaw engine, showing the oil pump and indicator, also the arrangement of push-rods and valve rockers.

### Strength of Construction.

As far as the working parts are concerned, the engine is normally and even massively constructed as regards wearing surfaces, though the reciprocating parts are kept as light as possible consistent with reliability. A stiff one-piece crankshaft with integral balance weights runs in plain bearings with an additional double row ball race on the driving side. The big end is split horizontally, and the short aluminium piston is fitted with a scraper ring in the skirt which plays an important part in the functioning of the cooling system. Both valves are mounted in the detachable cast-iron head, and are inclined towards the centre of the combustion space. Valve operation is by means of a short stiff camshaft having two separate cams, through suitable rockers and adjustable tubular push rods.

Apart from the scraper ring on the piston, which is common on most car and aircraft engines, the only additional working part to the normal motor cycle engine is the simple valveless rotary plunger type of oil pump driven from the spindle of the magneto gear wheel, the magneto itself being carried on a platform directly behind the cylinder and driven through a simple coupling.



Lubrication diagram, showing the lead from the oil base to pump and from pump to annular recess surrounding the cylinder barrel.

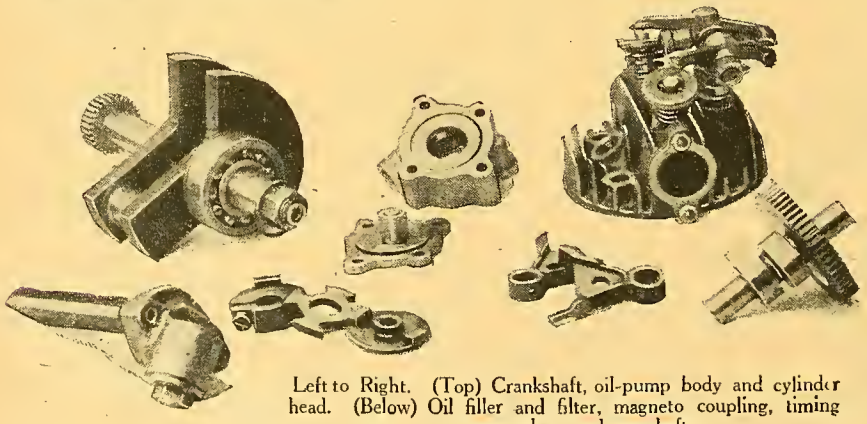
### Oil Cooling System Described.

Now for the features which are responsible for the neat but somewhat unusual appearance of the engine. The cylinder consists of a simple cast-iron barrel having a flange at the upper end. This barrel is sunk into a cylindrical extension of the aluminium crank case, and is held therein by the cylinder head holding-down bolts, the walls being well clear of the surrounding case except for a collar at the top. The action of the combined lubricating and cooling system is simply this. The capacity of the oil pump (5.1 pints per minute at 2,000 r.p.m.) is very much greater than is necessary for the lubrication of the working parts, and the oil is led direct to an annular chamber surrounding the top of the cylinder barrel. From the lower edge of this space the oil is allowed to escape downwards over the barrel, and is then thrown all over the inside of the engine, including the walls of the cylinder and crank case, finally returning to a well in the engine base to be circulated again.

During its continuous circulation from and to the sump, the oil absorbs heat from the working parts, a proportion of which is dissipated through contact with the aluminium walls of the crank and cylinder case. It is therefore obvious that a large wall area is desirable, since there is no external oil radiator—in fact, there is not even an external oil pipe to leak or fracture from vibration. Everything about the oiling system is simple, and it is practically impossible for trouble to occur; if, however, there is a shortage of oil, an indicator on the pump at once gives warning of the trouble.

### A Quart of Oil in Circulation.

It is impossible to over-fill the oil sump, which holds 2.4 pints, owing to the position of the filling cap at the correct oil level, and the pump should be everlasting, since it operates under ideal conditions and is of the simplest construction, having no spring-loaded valves.



Left to Right. (Top) Crankshaft, oil-pump body and cylinder head. (Below) Oil filler and filter, magneto coupling, timing gear rockers and camshaft.

**Oil Cooling and its Merits.**—Through the courtesy of Mr. Gilbert Campling, of 90, Jermyn Street, W.1, we have been able to handle a standard production engine on the road, and our tests were spread out over several days so as to obtain a fair idea of the engine's capabilities in normal use. Details of the experimental frame in which the engine was fitted are unimportant, since it is not intended for the market. Suffice it, then, that it was fitted with a clutch and two-speed gear having a top ratio of 5.5 to 1 and all-chain drive with no shock absorber; a Claudel-Hobson single-lever carburetter supplied the mixture.

After our initial experience—or rather inexperience: no kick-starter was fitted and the carburetter was inadvertently over-flooded — the engine invariably started easily, and throughout our test ran smoothly and faultlessly.

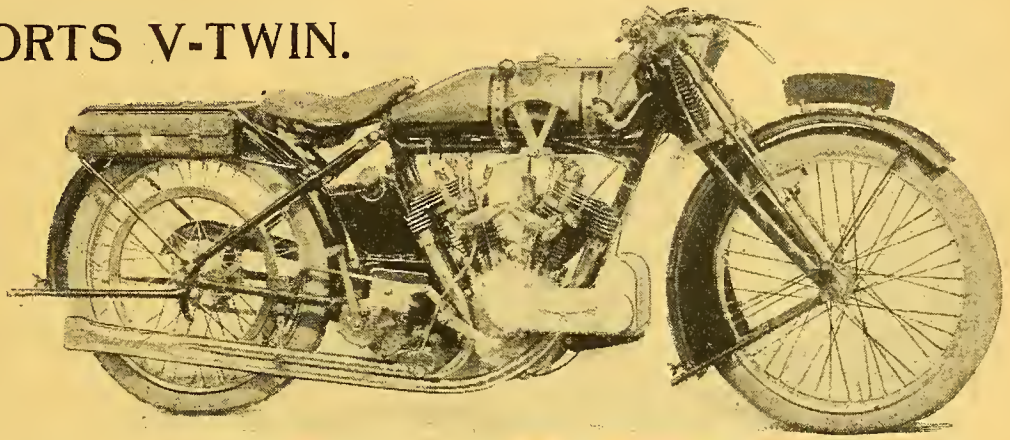
**Impressions.**

When the oil well is quite full there was a slight tendency to smoke when starting up or after descending hills with the throttle closed, but we had been warned when taking over the machine that the scraper ring fitted to this particular engine was imperfect. In spite of this slight tendency to smoke, however no plug trouble was experienced. Noise from the overhead valve gear is considerably less than that from many side-by-side valve units, and the power is beyond dispute.

A figure in the neighbourhood of 45 m.p.h. (by speedometer) is attainable on ordinary roads and one can fly up hills of 1 in 9 to 1 in 10 at well over the legal limit. In short, our experience goes to prove that the 350 c.c. Bradshaw is an engine to be reckoned with, and that it is capable of holding its own both in touring and competition fields. We look forward to a closer acquaintance.

# A NEW SPORTS V-TWIN.

## Martinsyde Range Extended by the "Quick-Six." A Speedy 739 c.c. Solo Mount.



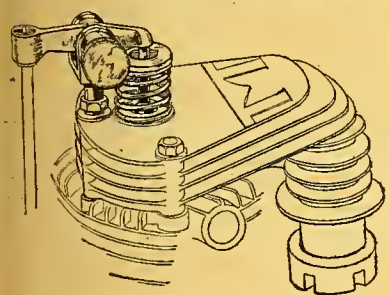
A speed machine which looks its part and is appropriately named the "Quick-Six."

TO be added to the list of attractive sports models already on the market is the "Quick-Six" Martinsyde, the happy name for which the well-known rider, H. H. Bowen, head of the firm's technical department, is responsible.

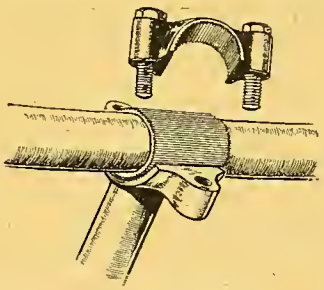
It was this machine which behaved so well in the recent Kop Hill climb, winning its class at 56 m.p.h. on the occasion of its first appearance in public.

**Improved Cylinder Heads.**

Considerable improvement has been made in the design of the cylinder head, which is detachable. Instead of the exhaust issuing from the cylinders at an acute angle the detachable head incorporates a special exhaust cage, heavily ribbed with radiating fins, while the addition of streamline ports adds greatly to the efficiency. Of course, the distinctive Martinsyde feature of overhead exhaust and side inlet is retained. Ricardo pistons are fitted, and each flywheel is machined and accurately balanced. All reciprocating parts have been lightened, while the connecting rods are of nickel steel and machined all over.



New detachable exhaust valve cage with a ribbed extension.



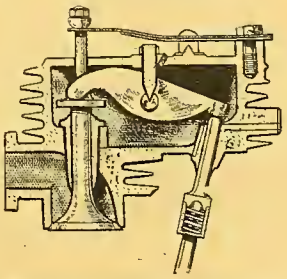
How the adjustable handlebars are provided with a positive lock by means of a knurled clip.

Another feature which is worthy of mention is that the length of the cylinder has been so designed that the top ring just emerges into the head by 10-1,000ths of an inch, thus preventing any ridge being formed at the top. A plain copper washer is employed to ensure gas-tightness at the head joints, this being found to be quite as efficient as a copper and asbestos washer. The same type of washer is also employed for the exhaust cage. Cone-type compression valves are fitted instead of compression taps, as these have been found to be far more satisfactory.

A close-ratio gear box is fitted, the ratios being in the proportion of 1, 1.5, and 1.8; the actual gears are: top 3.6, second 5.4, and bottom 9.1 to 1.

**Foot-controlled Oil Pump.**

A separate oil tank is now fitted, and in future models the oil pump will be foot-operated, while in the final design both brakes will be of the dummy belt rim variety, with compensating arrangement on the shoes to ensure a parallel movement. The price of the machine is £150, and it is manufactured by Martinsyde, Ltd., Maybury Hill, Woking, Surrey.



An experimental valve gear embodying leaf springs.

# NOTES ON ELECTRIC BULBS.

## Of Interest to Motor Cyclists using Electric Lighting Sets.

ELECTRIC bulbs in use at the present time are almost invariably of the incandescent type, consisting of a glowing filament enclosed in a glass globe.

Attached to the base of the bulb is a brass cap which fits in the lampholder and holds the globe rigid.

The cap also contains the contacts for conveying the current to and from the filament.

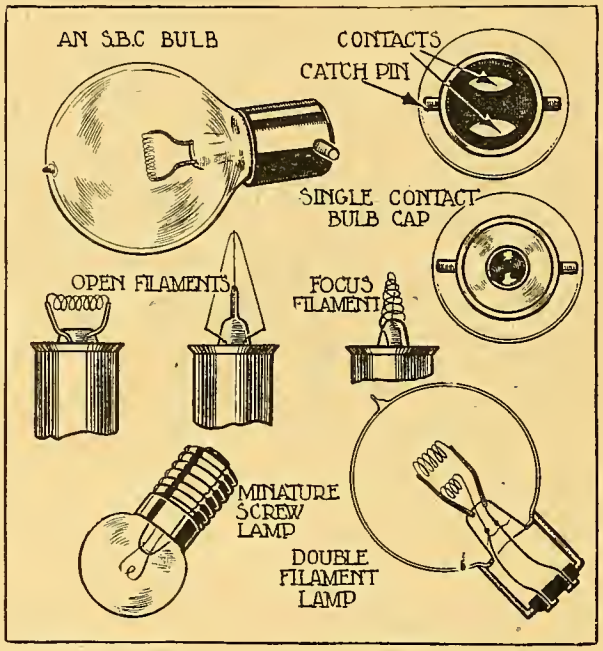
There are four standard lamp caps and holders in use in this country, viz. : (1) The Edison screw, (2) the large bayonet cap (L.B.C.), (3) the small bayonet cap (S.B.C.), and (4) the miniature screw cap.

The first is only used on very large bulbs, and the second is the size commonly employed in house lighting. For automobile lighting, the small bayonet cap is generally employed. The cap consists of a piece of brass tube provided with two small pins which engage in slots in the holder. Underneath the cap will be found one or two metal contact pieces which press against spring plungers in the holder.

Most S.B.C. bulbs are double contact—*i.e.*, the current enters by one contact and leaves by the other—but a number of single-contact lamps are in use, and in these the current leaves by way of the cap itself.

These bulbs are often used on motor cycles having earth return lighting systems.

The miniature screw cap is provided on small bulbs for pocket lamps, dash lights, etc. The current enters by the centre contact and leaves by the screw portion ; unfortunately they have the disadvantage of being liable to unscrew under vibration.



Various filaments, bulbs and bulb caps mentioned by the writer.

### Three Classes of Bulbs.

Incandescent lamps fall into three classes : (*a*) Carbon filament, (*b*) metal filament, and (*c*) gas-filled. The carbon filament was the earliest type, but is now practically obsolete.

A carbon lamp consumes about 4 watts per candle-power, whereas an ordinary metal filament takes only about 1 watt per candle-power, and a gas-filled lamp about half this amount. The watt, it may be mentioned, is a unit of power, 746 watts equal one horse-power.

The watts taken by a lamp or other apparatus may be found by multiplying the pressure (volts) by the current (amperes). For example, suppose a lamp takes 1 ampere at 6 volts, then the total watts will be 6, and if the efficiency of the lamp is 1 watt per candle-power, the candle-power will also be 6.

As their name implies, metal filament bulbs have filaments of very thin high-resistance metal, which attain a white heat when the proper current passes.

To prevent the filament burning away, the air is exhausted from the glass globe. "Half-watt" or gas-filled lamps differ from the previous kind, in that the globe contains some inert gas, such as nitrogen, instead of being exhausted ; this allows the filament to be run at a higher temperature, thus giving a much brighter light.

### Focus Filaments.

With respect to the shape of the filament, makers differ somewhat, but generally filaments may be divided into two types : (*a*) open, (*b*) focus filament.

The former is better for general lighting, but for headlamps the focus type is to be preferred, as the source of light is concentrated.

Some bulbs are provided with two filaments, either of which may be switched on at will, the one giving a bright light, and the other just a glow.

Lamps are generally marked with their volts and watts thus : 12 v. 6 w.

As before mentioned, the watts consumed give an indication of the candle-power, and for the general run of motor cycle lighting bulbs, excepting gas-filled or "half-watt," candle-power and watts may be read synonymously.

It is essential that the proper voltage be given when ordering, as a lamp of too low voltage will light very brightly, and quickly burn out. On the other hand, if the voltage of the bulb is higher than that of the circuit, it will only give a dim light ; but the current consumption will be less and the filament less highly stressed. A tail lamp suffering frequently from vibration is sometimes quite satisfactory with a bulb of the next higher voltage.

If the volts and watts are known, the current may be found by dividing the former into the latter, thus :

$$\frac{\text{watts}}{\text{volts}} = \text{amperes.}$$

A 12 v. 6 w. lamp, for example, takes a current of 0.5 ampere.

S. F. PHILPOTT.

# T.T. NOTES and NEWS

## Details of many New Racing Mounts. The Search for Efficiency.

AT 5 a.m. on Monday next, the 15th, practising for the great blue riband event will commence in the Isle of Man. Interest in the races is keener than ever.

* * * *

Safety helmets have been long compulsory for competitors in the T.T. This year the Gamage T.T. Safety Helmet has been accepted as the official head gear for competitors in the races.

* * * *

The 494 c.c. Douglas entered by Frank Whitworth, Ltd., in the Senior T.T. Race will be ridden by A. Jones, of Bargoed, S. Wales, who rode an Ivy in last year's Junior Race, covering two laps in 47 minutes, averaging 47½ m.p.h., the record speed for a two-stroke.

* * * *

Also entered by Frank Whitworth, Ltd., is an Ivy to be ridden by J. A. Jones, of Rhondda Valley, who is an ex-air pilot. He acted as a despatch rider in 1914, and after two years transferred to the Air Force, gaining his certificate as a sergeant-pilot.

* * * *

On the Monday prior to the Junior Race the Manx M.C.C. are organising a monster fancy dress or masked T.T. ball to take place at the Palace, Douglas, from 8 p.m. to 2 a.m. Many keen motor cyclists going to the races will no doubt take part in this social gathering.

* * * *

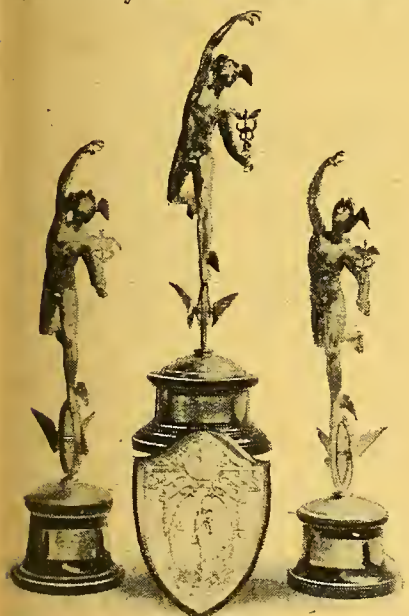
Those in need of spare parts or complete Burman gears will find them at the Braddon Garage, Athol Street, Douglas. Burman & Sons, Ltd., will open their depot on May 15th.

* * * *

Velocette T.T. machines will be very similar to that employed at Brooklands, the engine having a bore and stroke of 63×80mm. (249 c.c.), a deeply ribbed cylinder with two widely spaced exhaust ports, and a detachable aluminium head of considerable thickness. An aluminium piston is employed, having two narrow rings at the top, and plain bearings are used throughout the engine in conjunction with the well-known Velocette mechanical lubrication system. Chain drive is used throughout via a three-speed countershaft gear box giving ratios of 4.9, 7.1, and 9.3 to 1. A shock absorber is incorporated in the rear hub, and both front and rear brakes are of the internal expanding type. The cylinder is offset from the crankshaft centre by ¼in.

* * * *

Frame modifications to the Velocette include a wheelbase lengthened by 1½in., a 1½in. lower engine position, and



THE COVETED TROPHIES. This year, in addition to the Senior and Junior Trophies, there is a replica for the 250 c.c. Lightweights, which hitherto have competed for "The Motor Cycle" Cup. The shield is the Nisbet award for the most plucky performance.

## T.T. MEMORANDA.

### PRACTISING.

PRACTISING commences at 5 a.m. Monday next, May 15th.

No practising will be permitted after 7 a.m., or on Sundays.

### THE COURSE.

Douglas, Bray Hill, Quarter Bridge, Union Mills, Crosby, Ballacraine, Ballig, Kirkmichael, Ballaugh, Sulby, Ramsey, Snaefell, Keppell Gate, Hillberry, Cronk-ny-Mona, Governor's Bridge, Douglas.

DISTANCE.—37¾ MILES.

### NUMBER OF CIRCUITS.

Lightweights (250 c.c.), 5 laps. Total, 188 m. 6 fur.

Junior (350 c.c.), 5 laps. Total, 188 m. 6 fur.

Senior (500 c.c.), 6 laps. Total, 226 m. 4 fur.

### LAST YEAR'S SPEEDS.

Winner of *The Motor Cycle* Cup (250 c.c. Class), D. G. Prentice (New Imperial) averaged 44.9 m.p.h.

Junior Trophy was won by Eric Williams (349 A.J.S.) at an average speed of 52 m.p.h.

Senior Race winner, H. R. Davies (349 A.J.S.) averaged 54.49 m.p.h.

### FASTEST LAPS, 1921.

Lightweights.—D. G. Prentice (249 New Imperial), 49 min. 21 sec. (2nd lap).

Junior.—H. R. Davies (349 A.J.S.), 41 min. 4 sec. (5th lap).

Senior.—F. G. Edmond (499 Triumph), 40 min. 8 sec.° (4th lap).

° Record for the course.

### Time and Speed Table for the T.T. Course.

*Time per lap at speeds from 40 to 60 m.p.h.*

Overhead valve 350 c.c. Blackburne engine for the T.T. The deep radiating fins and the extension of the vertical fins of the head on to the exhaust port are special features.

**T.T. Notes and News.—**

Brampton racing forks. The capacity of the petrol tank is approximately 2½ gallons, while over a quart of oil is carried in the engine base, the latter being sufficient for the complete race. 24in. wheels will be retained, and it is probable that 2½in. tyres will be fitted. A point of interest is the fact that a silencer will in all probability be retained instead of the more normal straight-through exhaust pipe.

* * * *

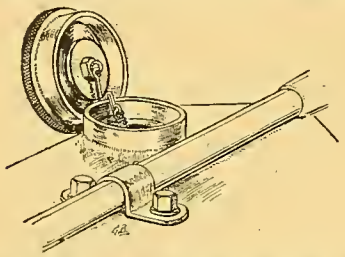
The Velocettes in the lightweight race will be ridden by R. N. Judd, G. Denley, and S. Jones.

* * * *

The Blackburne engines are not purely for racing, and have been developed with a view to fast touring work.

* * * *

Rudge-Whitworth, Ltd., will have their I.O.M. headquarters at Homefield,



Large filler caps on the Rudge are held in position by coil springs; when open they can be hooked over the edge of the filler.

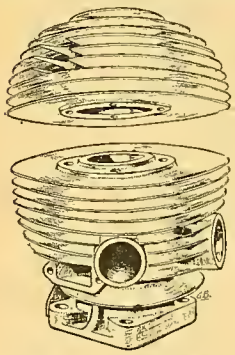
Palace Terrace, Queen's Promenade, Douglas.

* * * *

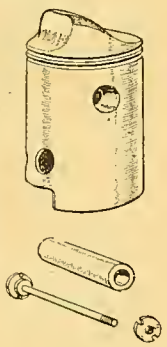
Blackburne engines will be well represented in the T.T. Races this year, as they will be fitted to more than half a dozen different makes.

* * * *

J. H. Mahlers has been in the Rudge drawing office for several years. He was a despatch rider in France attached to the R.F.C., and was wounded in the foot. He is one of the Rudge team.



Very deep ribs and two widely spaced exhaust ports are features of the Velocette T.T. machines. The detachable aluminium head is held down by four studs and has very thick walls so as to provide an easy heat flow.



An aluminium piston with two narrow rings is fitted to the T.T. Velocette. The hollow gudgeon-pin is retained by a light central bolt and washers.

Advocates of plain bearings have lost their stronghold of example, for in the Blackburne engines rollers are now used in the big end and on the flywheel side of the main shaft, while there is a ball bearing on the timing side.

* * * *

O. M. Baldwin entered for the T.T. in 1920, but retired in the third lap. He has had considerable racing experience. He obtained the rank of Flight-Commander R.A.F. during the war, gained the D.F.C., Croix de Guerre and bar, and is a Chevalier of the Légion d'Honneur.

* * * *

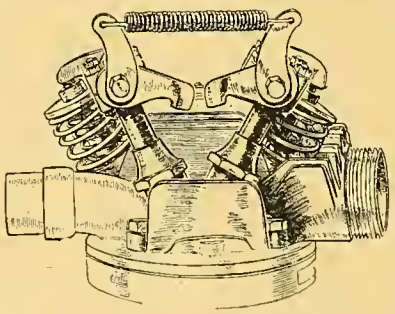
Only recently R. B. Ewens was in the experimental department of the Rudge works. He won the Lycett Trophy in 1914, and frequently rode as a member of the Coventry and Warwickshire M.C. team. He was a despatch rider during the war, attached to the A.S.C., and was for four years in France.

* * * *

Cooling has been carefully studied on the T.T. Blackburne engines, the fins on the head being much deeper than last year's and being extended to the exhaust port, which is of considerably larger dimensions. A domed piston of aluminium alloy is provided with two rings.

* * * *

The 350 c.c. Blackburne o.h.v. model (71×88 mm.) has undergone slight modifications. Among the chief features may be mentioned the valve gear, which is of the same design but somewhat lighter than previously. Two valve springs are



Cooling fins are now cast above the exhaust port of the cylinder head of the new 350 c.c. Blackburne.

fitted, one inside the other, in the case of each valve, while the inlet pipe is set on the skew, allowing room for an extension pipe to the carburetter.

* * * *

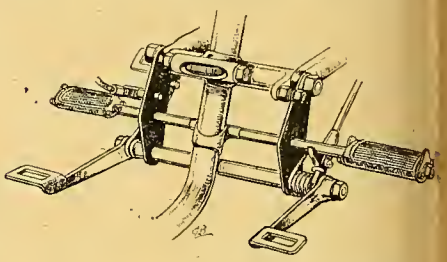
So far as the 500 c.c. T.T. Blackburne engine is concerned, it is practically the same as that used last year except for a few minor improvements.

* * * *

For the lightweight T.T. Burney & Blackburne, Ltd., have produced a 250 c.c. engine which is identical with the one which so signally distinguished itself in records on the track on a Sheffield-Henderson. It has the standard type of head and many parts used in the 350 c.c. engine, but machined so as to be considerably lighter in weight. Both this and the 350 c.c. model are declared to be capable of showing over 100lb. m.e.p. at nearly 5,000 r.p.m.

* * * *

Motor cyclists passing through Liverpool will find every accommodation at the garage of Victor Horsman, Ltd., 4, Brownlow Hill. There is ample accommodation



An expanding rear brake is operated by pedal from each side of the New Imperial T.T. frame.

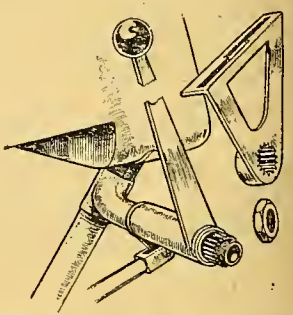
for any number of motor cycles, and in the event of anyone arriving late in Liverpool the premises will be kept open by arrangement, the usual closing time being seven o'clock.

* * * *

Applications for reserved seats in the A.C.U. grand stand should be made as soon as possible to the clerk of the course, A.C.U. local office, Hotel Peveril, Douglas, I.O.M. Prices of tickets for each race are as follows: Block A, just behind the Royal Box, rows two and three, 20s.; rows four, five, and six, 15s. Blocks C to F, first two rows, 10s.; last four rows, 7s. 6d. Members of the A.C.U. need only pay half these prices on production of their membership cards.

* * * *

A rider following just behind another competitor in the T.T. races is often liable to suffer from stones and grit thrown up by the back wheel of the machine in front. This year Easting Windscreens, Ltd., 132, Steelhouse Lane, Birmingham, are again manufacturing a specially designed handle-bar screen, which they will supply free to any entrant in any one of the T.T. races. Easting Windscreens will have a representative in the island after May 21st.



At the front end of the Rudge tank is mounted a change speed lever operating in a gate, adjustable to the rider's convenience. The rod is connected to a rocking quadrant over the gear box.

**T.T. Notes and News.—**

Outwardly the most striking feature in the design of the T.T. 348 c.c. J.A.P. engine is the enormous increase in the radiating surface, which enables the maintenance of power on full load on the mountain course, which is a far more important point in the T.T. than the capability of attaining high speeds over short distances.

* * * *

An aluminium piston with two rings at the top is used on the J.A.P. engines; the connecting rod is of special material and very light; the valves are of generous dimensions, while the exhaust port is 1⅜in. in diameter and of equal size to that of the 998 c.c. twin. Roller bearings are provided throughout, and other noteworthy features are light hollow tappets and compound valve springs. The aluminium fir cone exhaust valve cap radiators, which were seen for the first time on last year's J.A.P. engines, have become standard practice.

* * * *

The lightweight T.T. J.A.P. engine of 249 c.c. capacity remains much the same as last year's model, except that the radiating surface has been increased, a lighter connecting rod has been fitted, and a slightly modified piston with two piston rings of heavier section is used.

* * * *

As evidence of the influence of the T.T. on design may be instanced the fact that valve steels suitable for high quality valves have been produced for the J.A.P. engine after much careful experiment.

* * * *

In the Senior race the J.A.P. name will be represented by a twin-cylinder engine, of which the cylinders are two of the 249 c.c. type, making a total capacity of 498 c.c.

* * * *

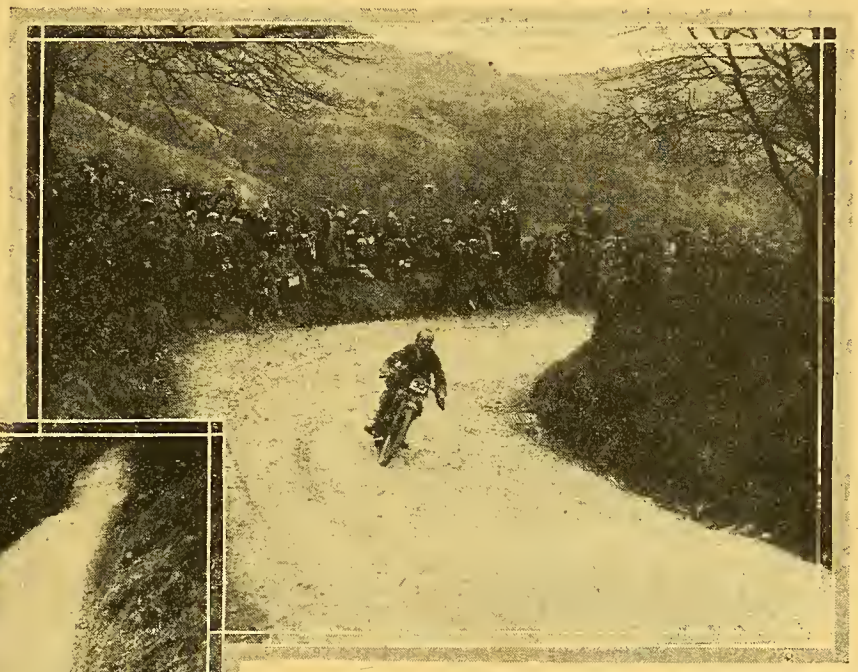
Altogether some nineteen J.A.P. engines will be seen in the T.T. Races. In the Junior class these will be fitted to the New Imperials, Dot and Diamond; in the Lightweight 249 engines will be seen on the Diamonds, New Imperial, Francis-Barnett, and Invicta; while the 500 c.c. twins will be fitted to the N.U.T., New Imperial, and New Gerrard.

# ON SUTTON BANK.

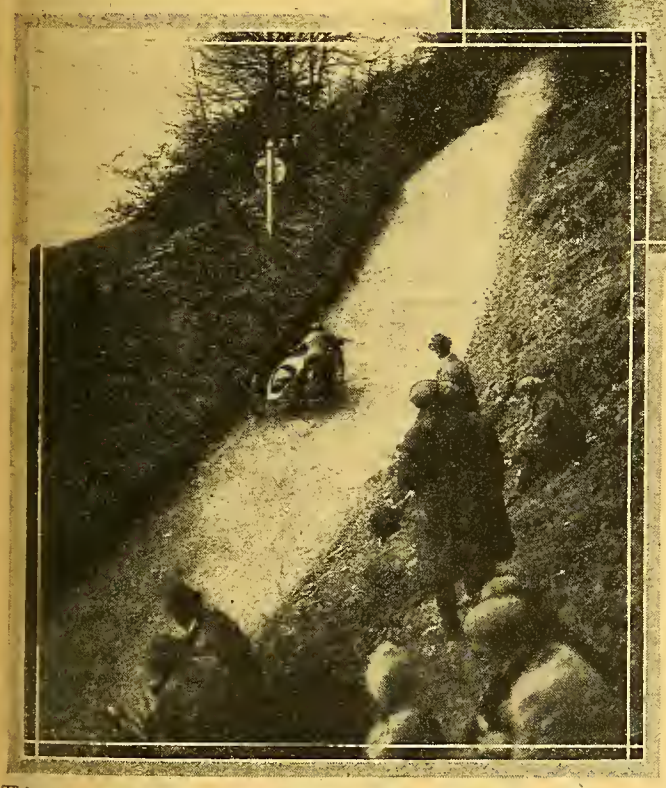
## A Yorkshire Hill Climb.

POSTPONED on April 22nd owing to the continuous rain, which made the surface almost unrideable, the York and District M.C. held its Sutton Bank Hill-climb, on the 29th of last month.

The meeting was a successful one, large crowds of spectators were present, and some high speeds were achieved, C. P. Wood, on a 532 c.c. Scott, coming within one-fifth of a second of the record for the hill. The results follow:



Donald Watson rounding the hairpin on his 532 c.c. Scott Squirrel.



This illustration of Sutton Bank gives a good idea of the imposing gradient of the famous Yorkshire hill. R. T. Cawthorne (490 Norton sidecar) making fastest time in his class.

SOLO UP TO 275 c.c.—F. W. Dosser (249 Velocette), 1m. 40⅕s.; Frank Reynard (249 Monopole), 1m. 49⅖s.

SOLO UP TO 350 c.c. (AMATEURS).—E. Wilkinson (349 A.J.S.), 1m. 27⅘s.; G. B. Gibson (349 Douglas), 2m. 18⅕s.

SOLO UP TO 350 c.c.—E. Wilkinson (349 A.J.S.), 1m. 30s.; Frank Reynard (249 Monopole), 1m. 35⅗s.

SOLO UP TO 560 c.c. (AMATEURS).—W. Wilkinson (Sunbeam), 1m. 24⅖s.; E. Wilkinson (349 A.J.S.), 1m. 24⅗s.

SOLO UP TO 560 c.c.—C. P. Wood (532 Scott), 1m 22⅖s.; C. N. Sadler (490 Norton), 1m. 22⅘s.

SOLO UP TO 750 c.c. (AMATEURS).—W. Wilkinson (499 Sunbeam), 1m. 22⅕s.; E. Wilkinson (349 A.J.S.), 1m. 22⅖s.

SOLO UP TO 750 c.c.—C. P. Wood (532 Scott), 1m. 17⅘s.; R. T. Cawthorne (490 Norton), 1m. 20⅗s.

UNLIMITED (AMATEURS).—E. Wilkinson (349 A.J.S.), 1m. 21s.; Donald Watson (532 Scott), 1m. 33⅗s.

UNLIMITED.—Fred W. Dixon (988 Harley-D.), 1m. 17⅘s.; R. T. Cawthorne (490 Norton), 1m. 18⅕s.

SIDECARS AND THREE-WHEELERS UP TO 560 c.c. (AMATEURS).—J. H. Illingworth (490 Norton), 1m. 56⅗s.; Wilfred Wells (499 Sunbeam), 2m. 18⅗s.

SIDECARS AND THREE-WHEELERS UP TO 560 c.c.—R. T. Cawthorne (490 Norton), 1m. 36⅖s.; C. P. Wood (532 Scott), 1m. 48⅗s.

## THE AMATEUR ROAD RACE.

Sir,—I have read with much interest your observations in connection with this proposed event, and I think you will agree that to imperil in the slightest degree the organisation of the regular T.T. event by sandwiching another event in between would have been the very height of folly, and I, as one member of the Competitions Committee, would oppose it to the limit of my power.

I venture to state that if the Isle of Man Club had been prepared to accept an open event to be held on the Friday, the majority of the Competitions Committee would have been disposed to recommend that a permit be granted on that date; and further, I have not the slightest doubt that the vast majority of the officials concerned in the T.T. events would have been only too glad to have lent all the help they possibly could. Speaking personally, nothing would have given me greater pleasure than to have helped them in any capacity they would have cared to place me in.

Furthermore, whilst I am one of the very last who would kow-tow to the manufacturers in any shape or form, yet we are bound to recognise that the T.T. event is, after all, largely a manufacturers' event, and we must in all fairness give considerable ear to their observations.

It is a most expensive undertaking for all the manufacturers who are concerned in the event, and is undoubtedly the greatest opportunity they have got of putting to the test all their best and newest ideas, having for their ultimate object the improvement of the motor bicycle.

T. RUTHERFORD.

Sir,—As a keen amateur motor cyclist of sixteen years' experience, I wish to criticise the A.C.U.'s attitude regarding the above, as I have noted with great disappointment that the A.C.U. has refused a permit for the event. The objections raised are paltry and very selfish, and the refusal is sure to create anti-A.C.U. feeling.

The A.C.U. is dependent for its very existence upon the subscriptions of amateurs, and yet deliberately refuses their requirements. For some time past it has been a well-known fact that the A.C.U. has supported the trade, and thought more of its own honour and glory than the needs of the poor private owner.

Pre-war the Union made a special concession to private owners entering the T.T. by accepting their entries at a lower fee, but this has now been abolished, and the private owner placed on the same level as the trade, with the result that the poor amateur has been practically wiped out of the event, the entry fee of 21 guineas being beyond the means of the majority. Further, what chance has the amateur, with his one machine against the trade entries, with numerous machines and a well-equipped temporary workshop on the spot?

Now, when a race is promoted genuinely for amateurs, instead of the A.C.U. giving every assistance and support, permission is promptly refused. This raises the question as to whether the Union is for the interests and benefit of the motor cycling public or for the trade. If the latter, then the former should cease their subscriptions. This action would certainly bring the Union to its senses.

The latest propaganda of the A.C.U. is: What is the best method of ensuring that every motor cyclist in the kingdom should become a member of the A.C.U.? The answer to this question is: Reorganise the Union in such a way that it is a genuine benefit, and not a hindrance, to the amateur.

The time has now arrived when motor cyclists should seriously consider further financing the Union until the Union so regulates its policy as to cater for their requirements in a straightforward manner, unbiased by any other influence.

Wetheral. AMATEUR.

Sir,—I cannot refrain from expressing my regret at what seems to me the extremely short-sighted policy of preventing the Amateur Road Race, an event that may possibly create more interest in the ranks of the motor cycling public than even the T.T. I have heard this put forward as a reason for its prohibition, *i.e.*, that the T.T. may be overshadowed. Surely this is an inadvertent admission that the amateur event may be more important. Let this be so or not, the policy of the trade certainly should be to encourage the sport among amateurs, even at the expense of events where professional riders predominate.

The initiative of the Manx M.C.C. is to be commended as much as the mistaken policy of the particular A.C.U. committee concerned is to be deplored, and I am of opinion the matter is of sufficient importance to warrant calling a special meeting in order to grant a permit for the Friday following the Senior race.

The idea of shelving an important matter because one or two members had left the meeting when this alternative was suggested seems very feeble handling of it. It would have been so simple, possibly, to have recalled the hurrying ones, or else to have called another meeting at an immediate date, but the line of least resistance seems to have been taken at the expense of the interest of thousands and, I firmly believe, of ultimate loss to the trade. Is it even now too late?

JAS. L. NORTON.

## 4 H.P. (?) AEROPLANES!

Sir,—With reference to the letter from "Nutherumph," on page 541 of the issue of April 27th, *re* 4 h.p. aeroplanes, may we correct a slight error in same?

The A.B.C. engine referred to was a "Gnat," designed and produced throughout in our own works, and had no connection with Fiat Motors, Ltd. Probably your correspondent has in mind the fact that this latter firm made for us, under licence, a certain number of our 3½ h.p. engines, for which there was such a large demand throughout the war.

A.B.C. MOTORS (1920), LTD.

Sir,—With reference to "Nutansplitpin's" and "Nutherumph's" letters on the above subject, the small Farman machine that the latter saw was the Farman "David," or sports model. It is still being made, and it is fitted with a 35 h.p. Anzani, and two of these machines were flying at the recent Nice aviation meeting.

The day of the 4 h.p. aeroplane is very, very distant. Assuming the complete machine could be built for a total weight of 200 lbs. (a very low estimate), it would have a weight of 50 lb. per h.p.—an absolutely unheard-of figure.

A machine much nearer the mark would be the de Pischof Avionette, which was produced early in 1921. This was a small biplane, with a flat twin Clerget of 16 h.p. The following are a few details: Span 17ft., length 11ft. 6in., height 4ft. 3½in., area 80⅔ sq. ft., weight empty 225 lb., weight per sq. ft. 2.78 lb., weight per h.p. 14 lb.

The performance is quite good (actual tests—not estimated): speed range, 56 to 60 m.p.h., climb to 4,000ft. in 52min., consumption of petrol 1.3 gall. per hour, and oil practically nothing.

This is the sporting type of machine to go for, instead of wasting time with 4 n.p. machines, which at the present day are practically impossible. The de Pischof is essentially a one-man machine, the upkeep is simple and inexpensive, and I am sure, owing to its simple construction, it could be marketed at less than £100. I should have mentioned that a very ingenious feature about it is the speed with which the wings can be dismantled or re-erected.

PHILIP J. ROBINSON.

## *SHAFT DRIVE'S UNPOPULARITY.*

Sir,—Anything more completely at variance with the facts than the statement of Mr. W. A. Weaver in your issue of the 27th the subscriber does not readily recall. To avoid any misconception his actual words are quoted:

"The reason for the shaft drive being left severely alone by manufacturers is simply because it is not, and cannot be made, as efficient as the chain drive. The difference is anything from 15% to 20%, according to design, and may be even greater after prolonged wear."

Has Mr. Weaver really had any, and if so just how much, riding experience on shaft-driven motor cycles? It is suggested that he has had none. He cannot be driving a chain-geared car—nobody does—and he cannot possibly have compared the two drives on a precision testing machine, for he would then know better. He is challenged to produce his evidence.

The present writer had three years (1910, 1911, and 1912) riding on two F.N. shaft drive single-cylinder machines and his experience *in those years* was that the gear box, change speed, clutch, and axle drive were absolutely beyond praise and roadworthily perfect.

So far as transmission efficiency is concerned, there is little or nothing to choose between an oil-bath chain drive and the standard shaft drive when both are new, but when both are old the former will give up altogether, and the latter will go on not materially impaired in efficiency. There is, of course, no comparison at all between open chain and shaft drives.

The foregoing encomium applies to the standard bevel drive, but it is submitted that a still better drive is possible with worm gear intelligently applied.

In the meantime the real reason why shaft drive is not used has nothing whatever to do with transmission efficiency. It is purely a question of mental inertia. The chain drive on the motor cycle is easily applied without any serious expenditure of "grey matter," whereas the shaft drive involves changes. The chain drive persisted for long on passenger cars—it has now gone utterly; it still persists on some few out-of-date petrol lorries, but it is rapidly going, and it persists on some electric commercial vehicles, and it is going there too.

Some day a bright British designer will wake up to the possibilities of shaft drive, and, if well backed, he will mop up the market—home and Colonial. W. L. SPENCE.

Sir,—Surely Mr. Weaver does not wish to convey that the transmission efficiency of a chain is 15 to 20 per cent. higher than the efficiency of a shaft drive; or, if he does, it would be interesting to know what he considers to be the efficiency of a good shaft drive and spiral bevel. I estimate it at about 93 per cent., so, if a chain is 15 to 20 per cent. higher in its efficiency, it would seem that by adding a sufficiency of chains between engine and road wheels the effective power of the engine could be increased *ad infinitum*.

Possibly Mr. Weaver wishes to say that a good shaft drive has an efficiency of 93 per cent., and a good chain has an efficiency of 94 per cent. This is a difference in transmission losses of about 17 per cent., and a difference in transmission efficiency of 1 per cent.

As to the effects of wear—I have seen a 1910 F.N. shaft transmission with the bevels practically as good as new. In what condition would a twelve-year-old chain be?

Why not be candid and admit that the ordinary single- or four-stroke twin engine has a torque which fluctuates too violently to permit of the advantages of shaft transmission being availed of? CECIL WEBB.

Sir,—Mr. Weaver's explanation of the unpopularity of the shaft drive is very wide of the mark. Where does he obtain his figures of relative loss of efficiency?

If he will turn up any recognised up-to-date book of engineering data he will find that, given a well-designed shaft and bevel drive, properly adjusted and accurately cut, there is only an initial difference of less than 5% in comparison with a chain drive in first-class order; I say initial advisedly, because the efficiency of a chain, and in particular of an unprotected chain, drops rapidly, whereas the efficiency of a shaft and bevel drive, if initially sound, tends to improve, and remains highly efficient during the greater part of its life if kept in proper adjustment.

The disadvantage of the shaft and bevel drive as applied to most motor cycles is that it makes a greater demand for an even torque than does a chain drive, which in itself provides a little springiness tending to eliminate the effect of dead centres. This, however, only affects the question of comfort, and does not in any way concern the question of mechanical efficiency.

On the other hand, this defect automatically disappears under the more even torque of multi-cylinder engines.

What killed the shaft drive pedal bicycle was its deadness, due to the uneven torque of pedalling over the dead centres. This latter shows up to a slighter extent in a chain-driven bicycle owing to the natural spring of a properly adjusted chain. Tension a chain drive bone hard, and it has exactly the same deadness as the shaft drive pedal cycle had in the old days.

On the other hand, in the new shaft-driven F.N. pedal cycle the hollow driving shaft is made of spring steel, and is so designed as to give just the requisite springiness in the drive to eliminate the deadness which killed former shaft-driven pedal cycles. I have been told by some of our leading cyclists who have made prolonged trials of the new machine that it is ideal.

No, sir, the main reasons why shaft drive and bevel is not generally adopted for motor cycles as it is for cars are:

(i.) It is difficult to design and expensive to manufacture.

(ii.) On account of its demand for an even torque, it is more suitable for use with multi-cylindered engines than singles or twins.

(iii.) Many motor cyclists fear it is complicated and difficult to adjust (which it is not).

(iv.) There is much unthinking and unknowledgable prejudice to overcome, and propaganda is hard and expensive work. A. ERNEST GELDER.

Sir,—Referring to Mr. Weaver's letter about shaft drive, he certainly gives a very wrong impression of its efficiency by comparing its use against chain drive in pedal cycles. Whereas, in the humble push cycle which has its drive geared up, four bevels are necessary against two chain gear wheels (and I presume it is in the gearing where the loss of power takes place, not in the shaft itself), in the case of a motor cycle, only two bevel gears are necessary against four chain sprockets, so it is absolutely wrong to compare them on this basis. Moreover, in the gear box of a shaft-driven motor cycle, the power is transmitted straight through on all ratios, while on the usual chain-driven machine on the lower ratios, the drive is taken right round the layshaft, and even on top gear this is turned idly and must take up some power.

I fancy the reason why shaft drive is not fitted on British machines is due to the obstinacy of manufacturers, as it is not the only thing which requires incorporating in designs. This is shown by the fact that this drive is incorporated in Belgian, Danish, American, and Australian machines.

Sheffield. BELT OR BEVEL.

### *T.T. AND 1,001st NUMBER.*

**On June 1st "The Motor Cycle" will celebrate its 1,001st consecutive issue. Nearly twenty years ago, when this journal was first published, the motor cycle movement was only just developing. The 1,001st issue of "The Motor Cycle" will contain many special articles and illustrations of exceptional historical interest; and, appearing on the date of the Senior Tourist Trophy event, particulars of the T.T. Races in the Isle of Man will form a feature.**

***Orders for copies of this enlarged issue should be placed in good time—Fourpence as usual.***

### COMPARATIVE INSURANCE RATES.

Sir,—With reference to the increased insurance rates for motor cycles, I suggest that an increase of 20 per cent. be paid by owners under, say, 35 years of age, and that a decrease of the present rates of 20 per cent. be due from riders over 35. I have noticed during my ten years' experience of traffic riding that motor cyclists in the late "thirties" are, as a rule, less rash and reckless on the road; also they have more riding experience to their credit. I have been insured since 1912, and I have yet to make my first claim. JOHN J. BARTON.

### TYRE MILEAGE.

Sir,—I notice your correspondent, "Brundell-Buster," is inquiring about the mileage of tyres. I have just discarded a Dunlop "Heavy" which covered 14,000 miles with only three punctures. I had this tyre on the rear wheel of a 3½ h.p. Sunbeam (weight 320lb.) for six thousand miles. After two punctures I put it on the front, where it has had only one puncture, which was caused by the canvas breaking, owing to my keeping the tyre soft.

Quite half the mileage was done over sandy, gritty roads. The tread is still all there and quite thick.

Its fellow, which commenced its career at the same time, lasted 10,000 miles. This one was on the rear wheel for 4,000 miles. STUART T. BARKER.

### ST. JACOB'S LADDER.

Sir,—Referring to the note on p. 510 of your issue of the 20th ult., describing a climb up Jacob's Ladder in the Peak, I may say that I climbed the greater part of this track last autumn on my 3½ h.p. N.U.T., fully equipped (weight about 300lb.). My lowest gear, however, was 10.5 to 1, and with this I was not able to get up a certain grassy bank near the top. With a gear of about 14 to 1 the whole climb would not present much difficulty. At the commencement of the climb is a very narrow bridge, which can be crossed if the handle-bars are not more than about 27in. wide (mine were too wide, of course!), otherwise one has to go through the stream, a bit of bog, and up a steep bank. I saw the wheel tracks of another machine on the path. CYRIL STYNING.

### TAXATION.

Sir,—If it be impossible to get the authorities to alter the basis of motor taxation, could not something be done for the benefit of our overseas friends?

As an example of the hardship that is caused to them: A client of ours came home on leave from Gibraltar during the last week in February and returned there in the middle of April. He purchased a new outfit directly he arrived here, and has had to pay six months' tax, or £2 10s., for 51 days' riding.

We feel sure that you will agree with us, that a tax of 1s. a day is *not* the way to encourage the sport of motor cycling. STANLEY MOTOR CYCLE CO., LTD.
(Stanley A. Bevington, Director.)

### ARTIFICIAL OBSTACLES IN AN OPEN TRIAL.

Sir,—Mr. Prince mentions my "amusing" letter. I am sorry that I cannot see the humour in this connection, and I think I am not alone in this view, but I am prompted to reply not on this count, but because Mr. Prince makes a statement which I am sorry to say is untrue.

Mr. Prince says: "Respecting Gorsey Bank watersplash, . . . this time, under easier conditions, more than one-half the competitors succeeded, and he failed. Hence the squeal."

This is an untrue statement, as I did not fail, for the simple reason that before encountering this second obstacle I was so disgusted that I had withdrawn from the trial. Actually I came along to the splash after my withdrawal, and used the footbridge to cross, not wishing for a repetition of the severe chill gained on the occasion of the Paskell Cup Trial, with a resultant week in bed. On the evening prior to the recent event, the splash was perhaps a couple of inches deep; as to whether organisers should allow artificial obstacles to be created in open trials will no doubt be decided by the body which protects the sport.

The Paskell Cup Trial, may I remind your correspondent, was not an open event, and therefore has no bearing on the present instance. J. A. NEWMAN.

### TWO-STROKE EFFICIENCY.

Sir,—Mrs. Jennison and "H.V.S." apparently consider that the exploded gas in a cylinder has to be cooled to atmospheric temperature before ejection, and that the ideal engine is that with the greatest heat losses. The "ratio" of volume to cooling area matters not at all; in fact, theoretically, it should be as great as possible, when the gas can be ejected when almost at its maximum temperature.

It is the ratio of internally exposed area to cooling area which is important, and this is practically constant.

Apparently Mrs. Jennison would favour a return to the almost obsolete T head cylinder, on account of its favourable "ratio," and shun the popular o.h.v. on account of its high volume to cooling area "ratio." The 350 c.c. engine which won the Senior T.T., which Mrs. Jennison instances, with its spherical combustion head, has the most "unfavourable ratio" of any, yet that does not seem to have spoilt its speed capabilities. In theory a cylinder should be of non-conductive material, in order to retain the heat. BUNNIE.

Doncaster.

### BROKEN FORK SPRINGS.

Sir,—I much regret to find that such a practical man as Kenneth H. Leech, in his experience on "Tuning a 4 h.p. Triumph," on page 506, makes a most unthoughtful statement as: "A bus with a link fork, having a broken spring, could not be ridden."

May I have the pleasure of tendering him a little experience?

On the usual morning's inspection I found the near side spring cracked, so gave the bike a run, and on cornering at a fair speed it broke altogether, and very lucky, too, I had a sidecar on.

I managed to inter-coil about 10 inches of similar wire, and rode home three days later without a hitch, with 12 stone on the saddle and 13 stone in the sidecar, together with a hefty weight of luggage.

I may mention that on a later occasion my steering head broke at the top; on this occasion I managed to rope the forks up tight with a spanner between the steering column and fork girders, and also wired the handle-bars, for steering, from the bottom links to the carburetter lever clamp on one side, and to the exhaust lever clamp on the other.

In this way I reached home at a pace of about 8 m.p.h., a distance of about 14 miles.

These are cases which may happen to the 9.999th individual, and during the last two years I have had bad luck in this direction, so I have decided to take down my mascot (His Lordship) on authorised advice from the village parson. REDDISH.

Stockport.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*,

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "IXION," of *The Motor Cycle*.
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

## Special Features.

THE SCOTTISH TRIALS DESCRIBED.
PASSENGER MACHINE TOPICS.
T.T. NOTES AND NEWS.

### Times to Light Lamps.

| | | |
|---|---|---|
| May | 11th .. .. | 9.35 p.m. |
| „ | 13th .. .. | 9.39 „ |
| „ | 15th .. .. | 9.42 „ |
| „ | 17th .. .. | 9.45 „ |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### North London Police Activity.

Edgware, Canons Park, and Brockley Hill are scenes of police examination of driving licences and machine equipment.

### Another Continental Racing Track.

Building has already begun on a motor-racing track at Glostrup, near Copenhagen, which it is hoped will be opened on July 16th.

### A Speedy Three-Wheeler.

Driving a J.A.P.-engined Morgan, E. B. Ware recently gained the flying five-miles record at Brooklands, doing 83.6 m.p.h., while he accomplished the 10-miles (standing start) at 79.26 m.p.h. These speeds are exceptionally good for a three-wheeled machine.

### Open Exhausts in the States.

They are troubled with noisy machines out in the United States just as we are in this country. An American writer's opinion is stated as follows: "What peculiar kink in a man's mental processes makes it perfectly all right for him to open the muffler and race a motor on a quiet Sunday morning and proceed to shatter the peace and tranquillity of the neighbourhood simply because he is abroad, is beyond us."

THE NEXT STAGE!

*MOTOR CYCLISTS interested in small or large cars should read*

The Autocar

Every Friday 4d.

*the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successful automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.*

(7)

### Efficient Silencers Called For.

Just beyond the Finchley Road Metropolitan Railway Station the police are active against riders of noisy motor cycles; they are apparently operating chiefly after dark.

### What Really Happened?

According to a well-known daily paper a London rider had just descended Pembury Hill, near Tonbridge, Kent, when his gear box caught alight, and the machine was enveloped in flames. Like many other motor cyclists we are wondering how it happened.

### Touring Facilities in Norway.

Norway has now joined the list of nations which issue the *Carnet de Douane* and the International Touring Pass, which are obtainable from the A.C.U. and the A.A. & M.U. The issue of these documents considerably facilitates touring in foreign countries.

### From a Provincial Paper.

"For sale, 10 h.p. Henderson, *Dynamic* lighting, etc., ——" and in the same column, "Late Douglas Combination, Easting Speedometer, Cheap."

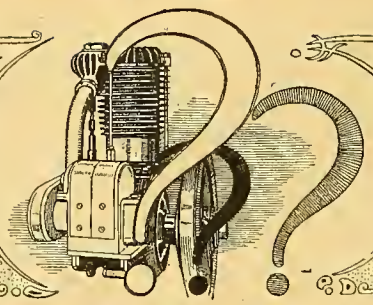
With the last item, presumably the fitting of this new make of speedometer has so completely altered the design that it has ceased to be a Douglas mount, hence the "late."

### Fact!

It is on record that a motor cyclist took to a dealer in one of the northern towns a highly-priced machine with the complaint that it would not go. Examination proved the motor cycle to be in perfect running order, so far as mechanism was concerned, and there seemed no possible reason why it should not run; however, taking a peep into the oil tank, the discovery was made that the owner had filled up with paraffin oil as a lubricant, with a result that needs no amplification.

A large number of motor cyclists responded to the Earl of Denbigh's recent invitation to the public to view his daffodils at Newnham Paddox.

# QUESTIONS AND REPLIES



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### SOME CURIOUS QUESTIONS.

(1) Is it compulsory to have lighted lamps on a motor cycle when on private property? (2) Is it out of order to hire a motor cycle with a private licence instead of hackney carriage? (3) My machine was smashed on private property by a car, the owner of which said he would pay for repairs if not excessive. I have now received a letter from his insurance company urging me to reduce my claim. (4) I also put a claim in for £1 a day loss of trade, but the insurance company contends I was out of order in doing hire work with my private licence.—R.H.

(1) It is not compulsory to have lights on a motor cycle if it is definitely on private property. (2) It is not illegal to allow anyone to hire your machine by arrangement, but you cannot ply for hire in the streets unless you have a hackney carriage licence. (3) It is difficult to say whether you will be successful in resisting the amendment suggested by the Insurance Co. If your machine was on private property various questions appear to be involved, such as whether you had any right thereon, and the same question applies to the car which ran into you. Also, is traffic normally allowed to use the private property on which you were? (4) From this question we imagine that you were running your machine as a public hire vehicle, although you do not say so definitely. If this is so we do not advise you to allow the case to be carried to court, as you would probably lay yourself open to proceedings for running an unlicensed hackney carriage.

### TWO-STROKE LUBRICATION METHODS.

A two-stroke Villiers engined machine which I have purchased has an oiling system quite unlike that peculiar to this make as illustrated in "Two-Stroke Motor Cycles." It has an amateur arrangement from the drip feed to the induction pipe. Is this satisfactory, and if so, how many drops per minute does the engine need at about 15 m.p.h.? The late owner said he used the petroil system.—W.K.B.

The lubrication system wherein the oil from the drip feed is led to the induction pipe between the carburetter and the cylinder is quite satisfactory. Set the drip feed to give about 30 drops per minute at the speed mentioned; you can easily increase or decrease the supply from this setting if the engine appears to need more oil or if it smokes at the exhaust, respectively. The petroil system also gives good results.

## Important Dates.

**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**

### CYCLE CAR QUERIES.

(1.) How does one adjust the bevels in the transmission of a cycle car, as mine are clearly too deeply meshed? (2.) I cannot persuade the clutch to free itself so as to allow a silent or quiet engagement of low gear when starting. Should tightening up the clutch springs effect this, and should the clutch be lubricated; if so, with what sort of oil?—A.H.K.

(1.) Your questions would be best submitted to the makers of the machine, and this applies specially to the first one. The bevels should be in correct adjustment when the machine leaves the works and if they do not run easily and silently after a reasonable amount of "running in" the bevel pinion must be adjusted but it is unlikely that you will be able to effect a cure yourself. (2.) This trouble, to a greater or less degree, is not uncommon on comparatively crude machines, and the fitting of some kind of clutch stop would be an advantage; increasing the tension of the clutch springs will make the trouble worse rather than better. If it is possible to do so without making the clutch slip, it would be better to slack off the springs as far as possible. The clutch cone should be dressed with Collar oil, if it has a leather face. If it is a fabric clutch no oil or grease must be used.

### CHECKING MAGNETO AND VALVE TIMING.

(1.) On a 5 h.p. 45° twin Minerva which I have, the exhaust valves have ⅛in. tappet clearances and the exhaust tappets have ⅛in. more lift than the inlet. There are no signs of excessive wear. If possible, give me the complete valve timing, as I would like to check it all over. (2.) The magneto of the same machine was originally a clockwise one, however, I reversed it myself. I turned the magneto round and retimed the slip ring, but I am running it with the clockwise breaker; what should I do? I expect it will break up in time. (3.) Are motor cycle engines timed on top dead centre when fully retarded?—J.W.

(1.) Time the engine so that the exhaust valves close as the piston reaches top dead centre and the inlet valves are just commencing to open at the same time. Old engines frequently require greater valve clearances than modern ones. (2.) You do not mention the make or type of magneto. Some contact breakers may be run in the opposite direction to that intended without serious damage. (3.) The ignition should be timed so that the spark occurs when the piston is on top dead centre of the compression stroke with the magneto control two-thirds retarded.

### GEARS AND JET SIZE ON DOUGLAS.

On my 2¾ h.p. three-speed Douglas I use two engine-shaft sprockets, one with 16 teeth and the other with 17, giving me gears of 5⅔ to 1 and 5⅓ to 1 respectively. At present I am running with 5½ to 1 gear, and find that the engine knocks slightly on corners and hills; this tendency is aggravated when I have a pillion rider. The bike has only run about 750 miles since its last overhaul and is doing 100 m.p.g. with two up; which gear is best to use for solo, which for pillion, and which is most suitable size jet to use in the Amac carburetter? —C.C.B.

For all-round running, you would find the 5⅔ to 1 top gear more satisfactory as it will give better acceleration from low speeds without seriously diminishing the normal road speed. The best jet size is a matter for experiment; probably No. 26 for reasonable power and economy.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.*

"F.H.P." (Bristol).—Binks jet sizes on 348 c.c. sports A.J.S.

"O.S.B." (Whitchurch).—Binks on 992 c.c. M.A.G.; Easting on Matchless sidecar.

"SCOUT" (London, N.W.2).—Schebler on Indian Scout.

"R.R." (Croydon).—A.B.C., 496 c.c. N.U.T., and 595 c.c. Douglas solo.

"E.H.B." (Nottingham).—348 c.c. Coventry Eagle, all-chain sports model; light sidecar or pillion.

"A.T.B." (Tonbridge).—348 c.c. Massey-Arran, Blackburne, three-speed, all chain.

"W.S.J." (Newcastle).—Quadrant with sidecar; power, accessibility, and front fork springing.

"G.H." (Wigan).—220 c.c. Velocette, three-speed.

"R.M." (Exeter).—1920 499 c.c. Sunbeam with light Henderson sidecar.

"D.F." (Shawbury). — L.S.D. Runabout: suitability for a lady, reliability, etc.

"T.C." (Aberdeen).—348 c.c. Wooler (touring model).

"F.E.P." (East Dulwich).—595 c.c. Douglas sidecar; running costs (200 miles per week).

"S.J.S." (Brixham).—Carden two-seated in hilly country; consumption; is Binks advisable? comfort.

"E.J.G." (Putney).—Clandel jet sizes on 348 c.c. Douglas and m.p.g.

"G.M.S." (Keith).—A.B.C., consumption, accessibility, reliability.

"W.W." (London, W.2).—Chemical decarbonisers.

"L.S." (Upper Clapton).—1920 or '21 Bleriot Whippet; also 1920 2¾ h.p. Levis with Enfield gear.

"M.O.G." (Cambridge).—Atmos or other automatic carburetter on 1098 c.c. Morgan-M.A.G.

"V.H.H." (Leicester). — 348 c.c. Wooler: speed, climbing, starting.

## SIDELETS

### Oiling Chains.

The County Chemical Co., Ltd., of Birmingham, claim that a considerable saving in time and oil is effected by the use of Chemico chain lubricant—a solid stick of graphite and grease encased in tin foil contained in a cardboard tube.

### Success Indeed.

Out of eighty gold and 120 silver medal winners in the London-Land's End trial, forty-seven and seventy-five competitors respectively used Castrol oils. In these numbers must be included both cup winners.

### Enterprise.

A little booklet containing about 20 gummed labels bearing the company's name and address, so as to save people the trouble of addressing envelopes, postcards, or labels, is being sent out by Barimar, Ltd., 10, Poland Street, London, W.1.

### Dry Batteries.

Genuine Hellesen dry batteries, which have been temporarily unobtainable owing to industrial trouble in Denmark, can now be delivered in all types and sizes from stock by A. H. Hunt, Ltd., H.A.H. Works, Tunstall Road, East Croydon, Surrey.

### Gears for Moto-Rêve Machines.

For readers who own Moto-Rêve machines, the Motor Supply Co., 223A, High Street, Lewisham, London, S.E.13, inform us that they are in a position to supply an engine shaft multi-speed gear of the expanding pulley type, with free engine to fit to all the older types of M.R. engines; no structural alteration is necessitated.

### In France and Italy.

G. Pinney, the French rider of a 499 c.c. o.h.v. Triumph, recently made fastest time in all classes and won the 500 c.c. class in a Grand Prix race at Dijon, and on the same type and make of machine P. Opessi tied for first place in the 500 c.c. class in one of the leading Italian events, the Gran Premio di Centaurie (1,000 kilometres) between Milan, Trieste, and Salsomaggio.

### A Fair Offer.

Thanks to the confidence which the makers, W. J. Ritchie and Co., John Street, Sheffield, have in the Argus silencer, they offer to re-imburse any motor cyclist to the amount of his fine should he be proceeded against on the score of excessive noise. This sporting offer holds goods if the silencer is fitted as supplied; incidentally, on full throttle running, loss of power due to back pressure created by this fitment, as compared with an open exhaust, does not exceed 5%.

### Competition in the Channel Islands.

In the Jersey Easter reliability trial a 348 c.c. Wolf-Blackburne, ridden by Miss N. Niles, secured first place, the lady winning a gold medal and silver cup.

### An Award Amendment.

The silver medal award which H. Greaves (4¼ h.p. Beardmore-Precision sc.) gained in the Victory Cup trial has been amended, and the rider is now credited with a gold.

### Found on the Road.

"Probably having an interest in Scotland" is the enigmatic way Mr. R. Lister, Long Preston, Yorkshire, describes the owner of a tool kit which he discovered near Hellifield.

### Puncture Sealing Tubes in Demand.

Owing to the great call for the Challenge puncture sealing inner tubes, the makers, J. P. Cochrane and Co., Ltd., of Edinburgh, are having to extend the department producing them.

### A Price Correction.

Some misapprehension appears to exist regarding the price of the 998 c.c. Indian machines. The Chief model costs £160 with electric equipment, and the Standard type £140; the latter has the spring frame. With sidecars the prices are £199 and £175 respectively.

### British Flat-twin Successes Abroad.

At Batavia, in Java, a 3½ h.p. o.h.v. Douglas machine gained four firsts and a silver cup in a speed test; at Sellick's Beach, in the South Australian speed trials, C. S. Lindsay, on a machine of the same type, broke six Australian records (mile and half-mile) and secured two firsts, a second, and fourth; and at the Circuito di Cremain, a 146 km. (90½ miles) race in Italy, P. Freschi won the 500 c.c. class, also on a 496 c.c. o.h.v. Douglas.

### Catalogues Received.

Hazlewood's, Ltd., Albion Mills, Coventry, catalogue of Hazlewood machines.

Burney and Blackburne, Ltd., Atlas Works, Bookham, Surrey. A useful booklet of hints and tips for users of Blackburne-engined motor cycles; a list of spare parts, with prices, is included.

Norrish and Pidcock, Ltd., 27, Chancery Lane, London, W.C.2. A booklet describing the Pidko twist grip handlebar controls, and a spring frame, footrests for pillion riders, and a golf cap which incorporates an eye-protector.

Hepworth and Grandage, Ltd., 14, Snow Hill, Birmingham. Hepworth Rings: A booklet dealing with piston rings in general and giving exact dimensions of piston rings suitable for practically every motor cycle engine on the market.

Shell-Mex, Ltd., Shell Corner, Kingsway, London, W.C.2 Two folders; one a price list of Shell lubricating oils, and the other describing the variable compression engine at Ricardo's engine-testing laboratory at Shoreham, used for testing Shell motor spirit.

# The SCOTTISH "6 Days" DESCRIBED-

At the double bend on Amulree. E. R. C. Scholefield (1,100 c.c. New Hudson) approaching the corner where enthusiasts gathered to watch and criticise the driving on the worst portion of the hill.

## Varied Weather Conditions; Hills that have Lost their Terrors; Snow-bound Passes Necessitate Route Diversions.

### THE INITIAL STAGE.

**Route: Edinburgh, Stirling, Crieff, Aberfeldy, Dalnacardoch, Pitlochry, Kenmore, Perth.**

**Test Hills: Sheriffmuir, Amulree, Trinafour, Kenmore.**

THIS year provided a violent contrast in weather with last. The 1921 event opened with blistering heat. For 1922 the week-end brought April weather, and the Scottish April would be termed winter south of the Tweed. Raw cold, a grey sky, and frequent storms mingled with sleet and hail accompanied us most of the way. "Ah, weel, we'll be able to see the potholes now they're fu' of watter," said a Scot philosophically. They could be seen well enough, but as far as Amulree they could not be dodged, for the entire width of the road was potholes, and it came as a real relief to enter the "tiger country," where sodden turf and living rock, and miniature moraines were exchanged for lorry-shattered macadam.

### Nerves and the First Hill.

The first observed hill, Sheriffmuir, just outside Stirling entailed no penalties except for the special awards, and was therefore expected to prove a real teaser. Actually it is an easy second-gear hill, some three miles long, with four or five short steepish knuckles, a number of shallow gullies, and a few boulders. It was not particularly soft or loose, and the bulk of the entry toyed with it quite contemptuously. There was a little over-anxiety, as usually occurs on the first hill of a trial, and some men were therefore clumsy, but the majority displayed an almost monotonous masterfulness. Watson-Bourne pushed his big Brough-Superior up at speed, while Humphries on the Velocette made perhaps the star ascent, his riding being perfect, and his speed immense for so small an engine. Amongst the sidecars the palm should be awarded to the P. and M. four-speeders. But the real eye-opener for the spectators, here, as on other colonial sections, was Colonel McKechnie's spring frame. The veteran inventor sat bolt upright, and his body appeared to progress in an absolutely straight line parallel to the angle of the hill, utterly devoid of bounce, dither, or tremor, whilst beneath his immobile body the cycle was bucking like a broncho. The least observant of the spectators was forced to note the strange contrast between his placid ease and the involuntary lurches of the other riders.

We marked over a hundred ascents as good. Foster's 698 c.c. Raleigh sidecar stopped mysteriously for half a minute. Lockhead (496 Ariel) got into a muddle during a gear change and fe Carfrae's Rudge-Multi was overgeare and he had to run. Both Harper ru abouts stopped at the same point, a parently owing to the extreme length the hill heating up their tiny engine for they went up easily after a sho cool. Meanwhile they were responsib for a huge baulk, through which Mi Hardee steered her machine very de terously.

The Henderson sidecar stuck a needed assistance on restarting. Th Ner-a-car climbed slowly without ve much in hand. The rest of the ent was on velvet, and of the *débutant* the little Raleighs and the Barr a Stroud engines deserve special mention

More rain, hail, and potholes mark the ride through Crieff to Amulree.

### Amulree Again.

There is really no reason why a modern motor cycle should fail Amulree; yet year after year it pr vides a first and very real stumblin block in these trials. 1922 was no e ception, there were no fewer than failures, and a considerable amount "footing" in addition, yet only a sma arc on each corner was at all loose.

It would be wrong to say that Harpe runabouts made clean climbs, but the certainly made clean ascents. Among th

**ıe Scottish "6 Days" Described.—**

·rge percentage which lost no marks, it difficult to classify the outstanding ·rformances—except as a spectacle exssive speed earned no bonus—but unıubtedly the following made the greatest ·ipression on the onlookers: A. F. ıownie (800 A.J.S. sc.), A. L. Downie 48 Raleigh), H. Greaves (348 Beardore B. and S.), D. S. Alexander (992 atchless sc.), B. H. Cathrick (499 unelt), G. Grinton (988 Harley-D. sc.), L. Sealey (557 B.S.A.), L. Newey 92 Ariel sc.), W. Woodcock (992 Ariel .)—the last-mentioned pair in a brief ·ilstorm—Mrs. Knowles (348 A.J.S.), G. ıott (992 Matchless sc.), W. Moore (532 ·ott—easily best of his team—W. Westıod (499 Triumph), Bert. Kershaw 48 New Imperial), J. M. Philpot (249 ·locette)—after missing a gear change wer down—D. Parsons (992 Matchless ·.), C. A. Henshaw (550 Hawker), R. ·wis (555 P. and M. sc.), P. Cunningım (555 P. and M. sc.), G. M. Townsd (555 P. and M. sc.), J. A. Watsonıurne (964 Brough Superior), F. B. ickson (964 Brough Superior), R. P. ınsom (496 Lea-Francis)—very symetrical cornering—W. S. C. Walker (736 ıuglas sc.), A. Lea (496 Lea-Francis), ıd J. Richardson (556 Lea-Francis sc.).

**Excitement for the Spectators.**

There was no lack of incident, amusg or otherwise. S. M. Greening (346 ·ancis-Barnett), jeopardised the chances the very consistent F.B. team by arging the bank; he bounced in the r, but it is doubtful if he stopped. urtling round the upper bend fully 10 .p.h. faster than anyone else, J. D. ·ice (532 Scott), fell a victim to the w of gravity, smashing his left footard completely in the tumble which reılted from his dashing tactics.

E. R. C. Scholefield (1,100 New Hudn), encored Greening's performance, but iled to get away so quickly, baulking Carfrae (499 Rudge-Multi)—who, inıdentally, deserves much praise for ing there at all on a 7 to 1 low gear. B. Fairley (494 Douglas) wobbled and ll heavily; W. Wilkie (728 Henderson .), shed his passenger and then failed, d R. M. Wishart (482 New Gerrard) ıpped.

At this point one of the cars stuck on e second bend, which effectively ended plucky attempt, which almost promised be successful, of F. W. Giles (800 J.S. sc.) to climb the hill on one ılinder (caused by a valve spring breake). Then F. W. Becker (688 cKechnie sc.) quite unsuccessfully tried negotiate the inside of the initial ·irpin—rather a striking contrast to ıl. McKechnie's imposing solo ascent. ·ter a series of masterly wobbles, H. ıld (346 Francis-Barnett) fell, and, to ·d to his discomfiture, baulked another ·der entered by himself, J. Boyd (499 ıulson). A few moments later J. Bodngton (1,098 Morgan), overturned, ·ppily without damage to himself or ssenger. From the onlooker's point of ew the fun ended here, although many splayed some interest in Mrs. Jansen's ther late and slightly wobbling but ean climb on the 211 c.c. Ner-a-car.

On Sheriffmuir, between Stirling and Crieff, a new hill included in the first day's run. (Top.) H. Greaves (348 Beardmore B. & S.) and A. G. Cocks (598 Beardmore Precision sidecar). (Centre.) D. S. Alexander (992 Matchless sidecar) on a bad stretch. (Bottom). A. F. Downie (800 A.J.S. sidecar) on one of the lower bends.

**The Scottish "6 Days" Described.—**

### Down the Afternoon's Test Hill.

Down Kenmore to the Aberfeldy lunch stop provided all varieties of road surface, and, in addition, an opportunity of prospecting "t'other side of Amulree," in readiness for the afternoon. Passages had been cut through two snowdrifts.

Trinafour provided little work for the club observers' pencils, the only stoppages being J. Shepherd (976 Chater Lea sc.), J. G. Porter (269 New Gerrard), and R. P. Ransom (496 Lea-Francis); several of the solo men footed but quite unnecessarily.

### Improved Driving Methods.

By the time Kenmore was reached on the return journey, practice on three official hills and umpteen unofficial hills had wrought a revolution in driving methods, and accurate handling now allowed the willing machines to display their real quality. Farr (557 B.S.A.), and Lea (496 Lea-Francis), hit the famous reef of rock on the worst corner, and stampeded the spectators without spoiling their own marks. Danskin (998 Rudge sc.), appeared to stop momentarily quite low down. Colonel McKechnie was again wonderfully steady.

Both the 269 c.c. Harpers foolishly cut the stiffest corner, and were all but stopped in consequence; their engines gobbled up the straights with ease. The Zenith-Bradshaw and all the Martinsydes were impressive. This once formidable climb has completely lost its terrors. Easily graded roads, with a considerable amount of mixed going concluded a very rough 188 miles at Perth.

## NOTES.

Who got the cheers on the hills?

Mrs. Knowles, Mrs. Jansen, and Mrs. Hardee (their sex).

The Harper Runabouts (being unconventional).

Col. McKechnie (the steadiness of his spring frame).

---

A special meeting of competitors had to be called on Monday night. They had been riding on the dye used for marking the roads, and being wet it stuck to their tyres and disappeared before the late men came round

---

A. H. Alexander took the opportunity of running-in his T.T. Douglas in the Trials.

---

Lady Spectator on Hairpin: "What's this coming up? Is it a motor crab?". (Answer: A Harper Runabout.)

---

## SECOND DAY.

**Route: Perth, Forfar, Laurencekirk, Banchory, Ballater, Bridge of Avon, Grantown.**

**Test Hills: Cairn o' Mount, Cabrach, Bridge of Avon.**

EVERYBODY expected a picnic on Tuesday, as it was known that snowdrifts had compelled the officials to cut out the main colonial section. To a certain extent these hopes were fulfilled. A strong breeze and bright sun had dried the roads by breakfast time, and the highway from Perth to Brechin is a veritable speedway where even a Brooklands 1,000 c.c. racer could be given its head. But beyond Brechin the organisers had inserted a cunning little detour, including four water splashes, round the last of which Cairn o' Mount was tackled by an acute hair pin. Then the weather broke, and a heavy storm churned the going into grease which was so thick that tyres could only cut it at speed; and nobody likes speed upon grease.

Cairn o' Mount is a very simple climb with a maximum grade of 1 in 6 and two mild hairpins. Few riders needed bottom gear, and many climbed much of it on top. Once round the right-hand hairpin and on the steepest portion of the hill proper belt-slip made itself known to several. Although Chase's (Dunelt sc. passenger wiped the belt vigorously the outfit soon came to a stop. (The second sidecar outfit of this make made an excellent ascent). For the same reason A. Rollason (496 Ariel) was compelled to paddle but did not stop.

Higher up the two-mile climb two fairly acute bends provided another point of vantage for the inquiring onlooker—perhaps of more value than the lower, for steeper, portion, for by now the smaller engines were beginning to feel the effects of the long, low-gear grind. Hugh Gibson (348 Raleigh), and A. Watson (992 Ariel sc.), both stopped, the latter owing to a choked petrol pipe; and J. D. Price (532 Scott) was noted climbing with his palm placed against the air inlet gauze.

### Good Ascents of Cairn o' Mount.

Among the most imposing ascents noted during our observations on the upper reaches were Eric Barnett's (346 Francis-Barnett), and J. A. Watson-Bourne's (964

On the lower portion of Kenmore. B. L. Bird on his 770 c.c. B.S.A. sidecar at the commencement of the hard climb.

### The Scottish "6 Days" Described.—

Brough-Superior). R. Carfrae (499 Rudge-Multi) found it necessary to run, but not for long. Quite a good climb was made by the first Harper runabout.

#### Speeding to Lunch.

From Banchory another speedway—the lovely Deeside road—led to lunch at Ballater. After lunch the going slowly deteriorated, its main feature for some time being huge shallow potholes full of water, and several yards across, so that everybody got pretty wet. Nearing Cabrach the course became really colonial.

*The Motor Cycle* representative climbed Cabrach Hill and found the official car stalled at the summit by a drift 6ft. deep. Route markings were hastily altered, and the men sent over a lower saddle of the ridge a mile or two to the east. More storms followed, and the concluding sections were a nightmare, never to be forgotten by the participators. The roads were naturally vile, narrow, rutted, stony and precipitous—the last few yards of the drop to Bridge-of-Brown are as nearly vertical as a road can be. Where the surface was not inches under water it was either thinly filmed with treacherous grease or plastered with deep sticky mire. Overhead frequent hail-storms bombarded us with missiles which fell like splintered glass.

#### Hill Climbing and Hail.

Many of the riders climbed the last observed hill—Bridge of Avon—under these conditions, skidding all over the road, and unable to see more than two or three yards ahead. The mud in a dip halfway along this curious hill was measured to be 14in. deep at one point, and men found themselves labouring downhill on bottom gear. The day's journey totalled 195 miles, and several veteran competitors described it as the most exhausting trip they had ever made.

If Bridge of Avon had been included in the route of an average one-day trial and the day was dry it would not have been worth observing. On Tuesday, however, it came after nearly 200 tiring miles; and the day was not dry. Not many competitors had passed before a high velocity hail-storm began, which was not only difficult to drive in but further served to liquefy the clayey upper stretch of the hill, leaving it in a most unpleasant condition.

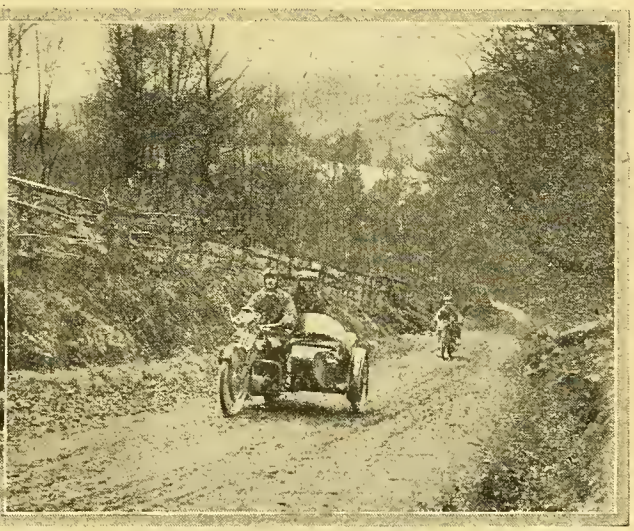
However, perhaps the nature of the test may be more exactly labelled by explaining that out of three apparently local non-competing motor cycles which essayed the climb two failed!

The great majority of the actual competitors climbed surely and well, but the two Harpers both met their Waterloo, low down, one, it is true, owing to wheel spin only. The passengers in W. G. Donaldson's Rover sidecar and F. J. Watson's Ariel betook themselves to their respective carriers, but perhaps needlessly; and F. W. Giles (800 A.J.S. sc.) bounced in his own inimitable manner, again probably unnecessarily.

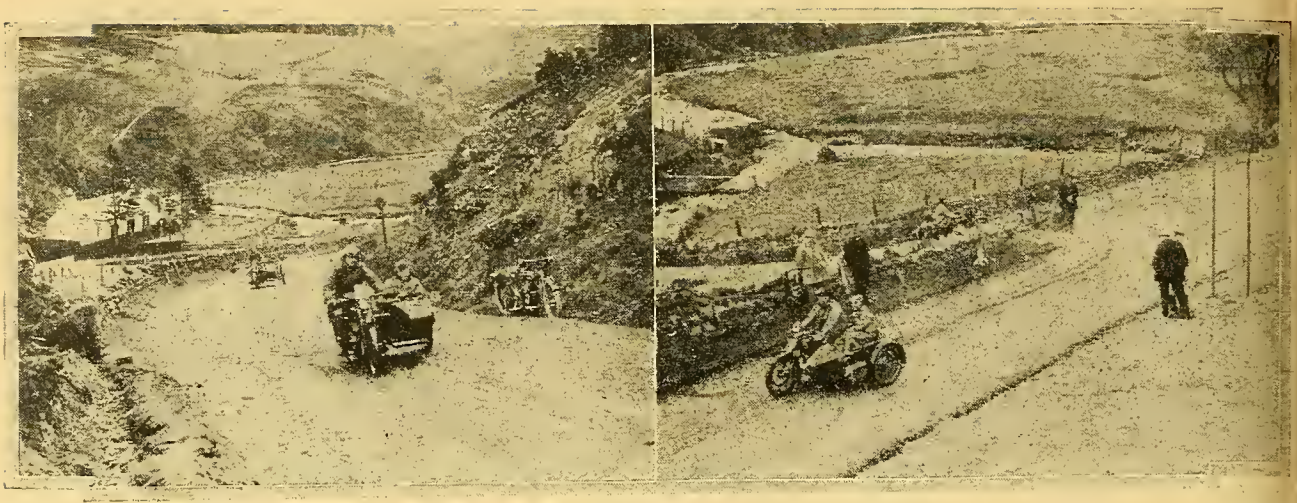
Of the teams, the Rudges, B.S.A.s, and P. & M. sidecars were consistently good. Mrs. Knowles (349 A.J.S.) and Mrs. Jansen (211 Ner-a-car) also made

Geo. Nott (992 Matchless sidecar) and W. Woodcock (992 Ariel sidecar) on the worst bit of Kenmore. A fine view of Loch Tay is obtained from this point.

On a bit of rough going above Kenmore. W. Wilkie on a 1300 c.c. American Henderson sidecar.



Another view of Kenmore. W. G. Donaldson on a 654 c.c. Rover sidecar, and H. Greaves following on a 348 c.c. Beardmore B. & S.



CAIRN O' MOUNT ON THE SECOND DAY'S ROUTE.

G. M. Townsend (555 P & M. sidecar) on the lower part of the hill. W. H. Bashall (678 Martinsyde sidecar) followed by his brother, J. T. Bashall, on a sister mount.

quite clean ascents, although the latter appeared to have some difficulty in keeping a perfectly straight course.

## NOTES.

On Tuesday's run one official piled up two sidecar outfits, an indication of the ordeal which successful competitors survived in triumph.

After 170 miles on Tuesday, Mrs. Knowles looked very tired, and said she was bored with "all this main road." After the concluding colonial section (which few men ever wish to see again under similar conditions) she was wreathed in smiles.

Many of the teams lost their clean sheets on Tuesday, but particular commiseration was bestowed on the Francis-Barnett crew in their loss of D. A. Atkin through a cush hub going very much wrong.

Punctures were very common in the Banchory area—among others G. M. Black and H. Collins, on 490 c.c. Nortons, were unfortunate—but on the whole the hail and rain prevented excessive tyre trouble.

Owing to the glutinous nature of the section just previous to Cairn o' Mount and to the hill itself, many were late at the Banchory check. Additionally it was alleged that this section was, variously, two to four miles longer than the route card said.

Before the last man left Perth on Tuesday morning the first man was checking in at Forfar, thirty miles away, a fact which reveals the size of the entry.

After the Harper runabouts had climbed Amulree, a trader solemnly insisted on peeping under their aprons. He explained that he suspected the aprons were fitted to conceal an auxiliary pedalling gear.

## THE THIRD DAY.

**Route: Grantown, Farr House, Drumnadrochit, Fort Augustus, Kyllachy, Grantown.**

**Test Hills: Abriachan, Glendoe, Inverfarigaig.**

THE roads had dried surprisingly quickly, and if main roads had been adhered to, the ride to Abriachan would have been dull, and for once the riders might have gazed at the great *massifs* of snow-capped mountains to the north. But a small section of sporting moorland track had been introduced as a surprise packet. It included many acute twists on a very narrow road, some deepish sand and awkward little humps, so timekeeping was not too simple.

Never was Abriachan in a better condition. Therefore, considering that the failures in 1921, when it was rather loose on the unguarded upper bend, were negligible, it was not expected to do much damage this year. Nor did it.

On towards Fort Augustus, and lunch, the route lay over ground which ought to be familiar to all previous Scottish competitors, but which, nevertheless, is as crooked in direction as the scenery is magnificent. Several competitors passed Drumnadrochit before the checker had arrived, but all turned back in good time except A. H. Alexander (348 Douglas), who discovered his mistake seven miles further on—and then got in on time!

### Test Hill Improved by Wet Weather.

Three miles on in the afternoon's run came Glendoe, also in excellent condition, and apparently improved by recent showery weather. There were only seven failures, but the clean ascents varied considerably in merit.

Competitors at Dufftown buy filling up with petrol and oil. In the foreground are W. Chase (499 Duncit sidecar), W. Moore (532 Scott), and R. Carfrae (499 Rudge Multi).

**The Scottish "6 Days" Described.—**

On the whole, those who earned a "V.G." in our representative's notebook had shown up well on previous hills.

**Outstanding Performers on Glendoe.**

In this case the stars were: B. L. Bird (770 B.S.A. sc.), J. H. Walker (770 B.S.A. sc.), A. H. Alexander (494 Douglas), L. L. Sealey (557 B.S.A.), Mrs. Knowles (349 A.J.S.)—drawing a salvo of cheers from the onlookers—R. B. Clark (494 Zenith-Bradshaw)—particularly impressive, but noisy—R. R. Grindlay (499 Rudge)—on second gear until round the right-hand bend—E. A. Barnett (346 Francis-Barnett), G. W. Scott (532 Scott)—best of his team—W. H. Bashall (678 Martinsyde sc.), A. A. F. Symes (678 Martinsyde sc.), J. T. Bashall (678 Martinsyde sc.)—the three last-mentioned in the order named—Bert Kershaw (248 New Imperial)—slightly slipping his clutch but making a faultless climb—J. M. Philpot (249 Velocette), J. Stirling (349 A.J.S.), Mrs. Hardee (992 Matchless sc.), H. Collins (490 Norton), J. A. Watson-Bourne (976 Brough Superior), W. E. McKechnie (688 McKechnie), L. Payntor (490 Norton), R. M. Wilson (348 A.J.S.), J. M. Philipps (499 Sunbeam), D. White (347 G.R.I.), J. Wallis (688 Coventry Victor), J. R. Fellows (499 Sunbeam), and J. Boddington (109 Morgan).

Several of the sidecars suffered from wheel-spin, but C. W. Valling's (499 Dunelt sc.) was the only one actually to fail from this cause.

**Touch and Go.**

It was touch and go with: E. Foster (698 Raleigh sc.), F. T. Sibley (499 Rudge sc.)—much clutch slipping saving him—D. B. Calder (249 New Imperial), G. K. Hubbard (346 New Imperial)—the New Imperials also being saved by dint of clutch slipping—R. Lewis (555 P. and M. sc.)—G. M. Townsend's similar outfit failed owing, it seemed, to a delayed gear change—J. B. Sanderson (292 Hawker)—commenced mis-firing low down, but to everyone's amazement pottered slowly up without a stop—and Mrs. Jansen (211 Ner-a-car). A. Lea (496 Lea-Francis) failed to get away at first attempt after a baulk. J. Richardson (564 Lea-Francis sc.), R. Carfrae (499 Rudge Multi), and W. G. Donaldson (654 Rover sc.) failed altogether.

The picturesque nature of the country at Bridge of Avon will be gathered from the above illustration which shows J. M. Philipps (499 Sunbeam), and A. Shepherd (292 O.K. Junior), about to ascend the hill.

E. Foster (698 Raleigh sidecar) at Achbreck. Snow is to be seen on the distant hills.

Whilst the sidecars were forced to take the water-splash at Cairn o' Mount, solo riders could avoid doing so by means of the footbridge. The brothers H., A. H., and J. R. Alexander riding in company.

The famous corkscrew at Inverfarigaig was in better condition than in 1921, but got badly cut up by the time half the men had gone up. The reversing of the cars on the hairpins and the skid-cornering of the sidecars rapidly destroyed the surface. This year the check was at the top instead of at the bottom as in 1921, and the men came up as they pleased.

### Confusion on Inverfarigaig Corkscrew.

A great deal of baulking resulted, in which the cars were the chief offenders; some of them were atrociously handled, one actually reversing eleven times on the hill, whilst another rammed Horwood's Ariel and threw the rider right over his handle-bars into the heather.

The hill presented a fantastic spectacle at intervals; from the same standpoint all six hairpins are visible, and as many as fifteen riders were dotted over the hill simultaneously, including solos, sidecars, and cars, variously engaged in footing, bouncing, reversing, or quietly waiting for a baulk to clear. To the eyes of a spectator some of them were travelling to the right and others to the left. It was quite impossible to say dogmatically who footed and who did not, and the following notes cannot be based on complete views of each ascent.

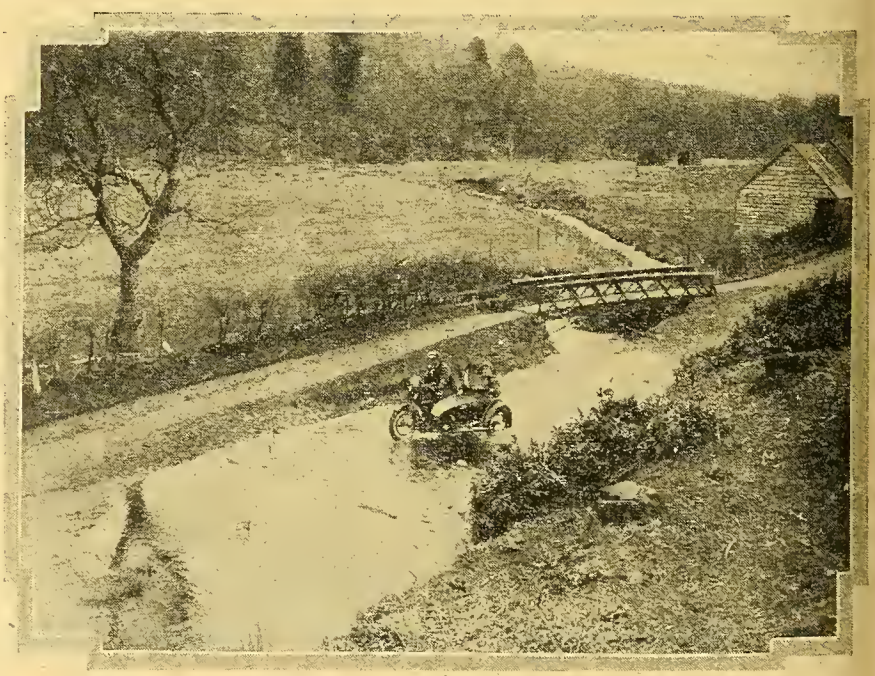
### Three-wheelers Shine.

Emphatically the best impression was made by the three Morgans driven by Boddington, Carr, and Sawtell. Sidecars were skid-cornering in alarming fashion: cars were reversing and wheel-spinning: half the solo machines were plunging and floundering. But the three Morgans went up placidly without an atom of fuss. Amongst the solo machines we personally credited star ascents to Batten (420 Beardmore B. and S.), Paynter (490 Norton), Ransom (496 Lea-Francis), Wilson (348 A.J.S.), Hardman (499 Wilkin), Sleven (249 Velocette), and Wilson (348 Edmund B. and S.). Very good climbs were apparently registered by N. Downie, Rollason, and Lochhead (496 Ariels), Farr (557 B.S.A.), Gibson, Hadfield, and A. Downie (348 Raleighs), R. B. Clark (494 Zenith-Bradshaw), Barnett (346 Francis-Barnett), G. M. Black (490 Norton), and Kershaw (248 New Imperial). Colonel McKechnie was very steady, but came up late when the road was cut to pieces, and had to foot a trifle. Mrs. Jansen kept a foot trailing in readiness, but made an excellent climb. Mrs. Knowles ascended in her usual perfect style, and her climb was neater than most of the men's. Stirling (348 A.J.S.) had ill-luck in breaking his front chain on the hill.

The best sidecar ascents were not a pretty sight and were calculated to frighten ignorant spectators, as the passenger was usually in some gymnastic attitude or other, and the front wheels did not seem to possess much control of the machines. At the fourth hairpin several machines all but plunged clean over the edge of the road, and others rammed the bank, whilst Mrs. Hardee's Matchless first tried to climb the bank and then lay down on its side. Nearly all the sidecars got up, but what with bouncing, skidding, wheel-spin, and the antics of the occupants the spectacle was not edifying. Among the best performances we noted D. and H. Alexander (992 Matchless sc.), Bird (770 B.S.A. sc.), Cocks (598 Precision sc.), Shepherd (976 Chater-Lea sc.), Newey and Woodcock (992 Ariel sc.—the latter surely broke all records by passing another sidecar on the hill), Townsend (555 P. and M. sc.), Hubbard (539 Rex Acme sc.), and the two Dunelts, which were thoroughly impressive, especially in view of their small engines.

### Cars and Motorcyclists Mixed.

Many men were baulked, especially by the cars which were sent up haphazard in order of entry, a blunder which ought not



J. H. Walker (770 B.S.A. sidecar), in the shallow water-splash at Cairn o' Mount.

**The Scottish "6 Days" Described.—**

to be repeated on such a hill. Poor Horwood was placidly negotiating the second hairpin when a car ran violently into him and hurled him off the road. He made a neat ascent half an hour later. The driving, on the whole, was much better than in 1921, many of the solo men making perfectly clean ascents without taking their feet off the rests.

Once over the hill rain began to fall, and time was difficult to keep in the next section, which was full of abrupt twists.

### NOTES.

F. W. Becker (5-7 McKechnie Victor sc.) was "caused to retire" on Wednesday owing to a skid which buckled his sidecar wheel.

Latest *coué*ism: Every day at every check everybody gets faster and faster.

The E.D.M.C.C. might do worse than adopt the A.C.U. regulation as to noisy exhausts. The entry included some terrible ear-splitters, and some of the smaller engines were the worst offenders.

Above Loch Ness a number of the competitors had to brake hard to let a herd of wild deer cross the road.

Fauconbridge, after experiencing gear box trouble at Kenmore on Monday, rode the whole way to Aberfeldy on bottom gear.

On Wednesday three champions, all confidently tipped as certain "golds," packed up. A. F. Downie (magneto), J. A. Newman (timing gear), and G. Grinton (broken chain stay).

Easy going at Bridge of Avon. S. H. Hubbard on a 998 c.c. Rex-Acme sidecar.

The Harper runabouts were greatly missed at mid-week. One of them seized an engine bearing late on Tuesday, and the other was charged over by another competitor outside Grantown on Wednesday. Their obvious merits have impressed the riders and spectators alike.

Any lingering doubts as to which was the worst hill—Inverfarigaig or Glendoe—have now been settled definitely "in favour of" the former.

One of the many ticklish corners on Inverfarigaig observed by interested spectators. W. E. McKechnie (688 McKechnie)

### FOURTH DAY.

**Route: Grantown, Bridge-of-Brown, Achbreck, Cabrach Castle Newe, Ballater, Banchory, Cairn o' Mount, Charterstane, Aberdeen.**

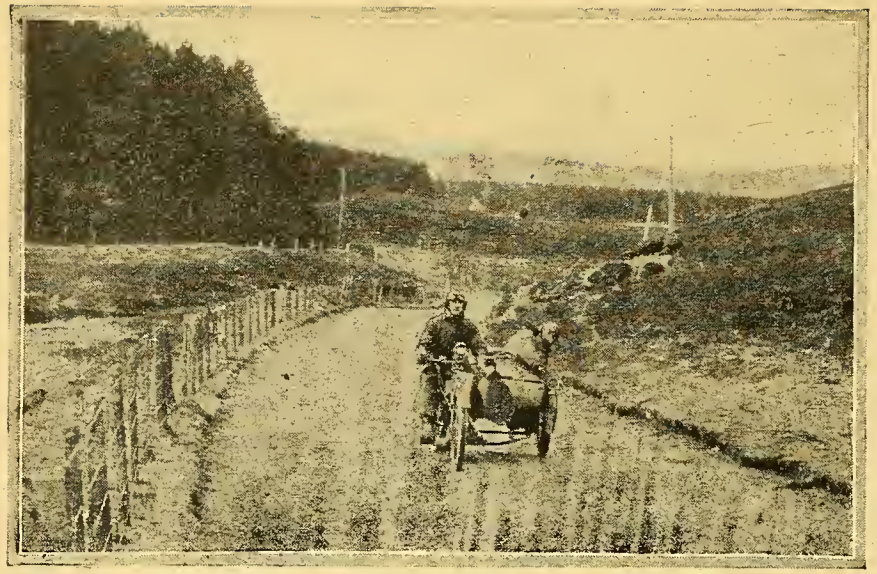
**Observed Hills: Bridge-of-Brown Cairn o' Mount.**

THE easiest day so far was the general opinion at the conclusion of Thursday's run. Yet there were twelve absolute failures (including some who had not previously lost marks) on the first hill, Bridge-of-Brown.

To a large extent the route followed Tuesday's course in the reverse direction, but the first fifteen miles were drier than then, and the lower reaches on the steepest portion of the observed hill were in fair surface order. There was not a single failure here, although some had little to spare; these included Donaldson (654 Rover sc.) and Vallings (499 Dunelt sc.). A few hundred yards higher up, however, things began to happen, for the surface deteriorated into a squelchy mire, glutinous to a degree seldom met with on British roads. Slogging was the rule rather than the exception, and the following stopped completely: N. W. Downie (496 Ariel), Donaldson (Rover sc.), Greaves (348 Beardmore B. & S.), Chase (499 Dunelt sc.), Vallings (499 Dunelt sc.), E. S. Astley (988 Rudge sc.), Barnett (346 Francis-Barnett), Carfrae (499 Rudge), W. H. Bashall (678 Martinsyde sc.), and Scott (532 Scott). Greaves, Bashall and Barnett had previously ranked among the very best performers on the hills, and Bashall had actually climbed the 1 in 3 initial rise on second gear.

**Touring Conditions for a While.**

Thereafter the trial became temporarily a tour, as the riders sped over fair roads



A scene on Thursday's run. F. T. Sibley (499 Rudge sidecar) midst picturesque surroundings.

flanked in the distance by sunlit snow-clad mountains. There was certainly no excuse for the loss of marks on time between Grantown and the lunch stop at Ballater; nor was there in the afternoon, when the reverse side of Cairn o' Mount, which was observed, formed the only difficult section. Nevertheless, there was quite a number of retirements, and it was evident that the gruelling of the first two days was beginning to tell. R. R. Grindlay (499 Rudge) was compelled by the club to retire owing to a fractured rear stay, J. Boyd (499 Coulson) wisely gave up at Ballater, for his plug had blown out and punctured the petrol tank. Mrs. Jansen (211 Ner-a-car) also was reported missing amid general expressions of regret, for hers had been a plucky ride. Bird (770 B.S.A. sc.) was towed into Aberdeen from Stonehaven with a broken frame tube.

## FIFTH DAY.

**Route : Aberdeen, Laurencekirk, Forfar, Perth, Dollar, Falkirk, Murrayfield Car Terminus, Edinburgh.**

**Observed Hills :** *Nil.*

THE selectors of a trials route never enjoy an entirely free hand. The necessity for hotel and garage accommodation at midday, as well as at night, imposes fixed points, especially in Scotland. Subject to these limitations, the E.D.M.C.C. intended to use Friday to develop any latent weaknesses in the machines originating from the bucketing which they had sustained earlier in the week.

For this nefarious purpose two ingredients were judiciously blended in the route from Aberdeen to Edinburgh, viz., assorted potholes and speed stretches of irresistible temptation. Dame Nature came to their assistance by setting a stiff sou'-wester to blow hard in the men's faces, so that engines of 350 c.c. needed continuous full throttles to average 20 m.p.h. between Aberdeen and the lunch stop at Perth.

The road undulates mildly as far as Stonehaven, and is broad, flat, and fine-surfaced for the rest of the 84 miles into Perth. The small machines were compulsorily all out—for example, Mrs. Jansen had to keep the Ner-a-car very hard at work, and some of the two-stroke riders found a Brooklands attitude advisable. On the other hand, the men with big engines were unable to resist temptation, though the gale slowed them to a maximum of 40 m.p.h. Petrol consumptions were 25 per cent. higher than they had been in the mountains up north; but nobody grumbled, so long as the sun shone. The sensation of the morning was the phenomenal travelling of the two little Harper runabouts. Both were running unofficially, one because of a mysterious bearing seizure, the other because a motor bicycle—with a prejudice for the conventional—had rammed it amidships. But they certainly astounded the many experts engaged in the trial. They weigh 280lb. They offer more wind resistance than any bicycle. Their engines are merely the standard Villiers, with a special cylinder designed by Mr. Harper. Yet they butted steadily into the teeth of the gale all morning at 30-35 m.p.h., and even such speed mounts as the Brough-Superior had no easy job to overhaul and pass them.

### Parking in the Open at Perth.

The fine weather fortunately lasted out the morning, for during lunch at Perth the machines were parked in the open on the river embankment. Engines had been subjected to a semi-Brooklands test all morning : after lunch came the turn of the frames. The road authorities are evidently doing their best to improve the surfacing in the industrial districts, and the trial traversed quite a lot of good

A quintette on the road at the end of Loch Ness. J. D. Price (532 Scott), G. M. Black (490 Norton), W. Moore (532 Scott), P. H. Johnson (499 Rudge) and J. Richardson (556 Lea-Francis sidecar).

**The Scottish "6 Days" Described.—**

roads: and there is a marked improvement in the Stirling area since 1921; nevertheless, the riders grew quite callous about potholes which would cause a scandal in southern England.

### Individual Incidents.

Mrs. Knowles was still going strong for her gold on the little A.J.S. Archie Cocks on the Beardmore-Precision sidecar was another unfortunate. He broke the "sleeve spring" of his spring fork earlier in the week, and had conducted a spirited controversy thereafter with the judges as to whether or not a couple of tyre levers strapped to a fork "reinforce" it. In the rules any "reinforcement" of a frame disqualifies for a gold medal, but so far Cocks had brandished Nuttall's dictionary at the judges' heads in vain. This controversy will now never be settled, as Cocks broke his chain stay after lunch, and so retired. Perhaps the clearest case of "hard lines" was the retirement of Bert Kershaw's New Imperial on Cairn o' Mount during the fourth day's ride. Beautifully handled, it had performed as well as anything in the trial. Suddenly during the climb up the Cairn it apparently seized. In a hasty diagnosis the gear box and magneto were disconnected, when the engine proved to be perfectly free. The magneto armature, as one rider put it, had "burst"! R. B. Clark was also in trouble after lunch. In his hands the only Zenith-Bradshaw competing was certainly registering a quite outstanding performance. Its misconduct was trivial from a touring standpoint—merely the fracture of the cup washer confining an inlet valve spring. But Clark had no spare aboard, so he cleverly removed the sturdy standard spring and substituted the light spring from his tyre pump, the valve now operating automatically. His maximum speed was thereby reduced 20 m.p.h. or so, and it remained to be seen whether in this enfeebled condition his engine would be equal next day to two very teasy hills—Tynron and Blackford.

---

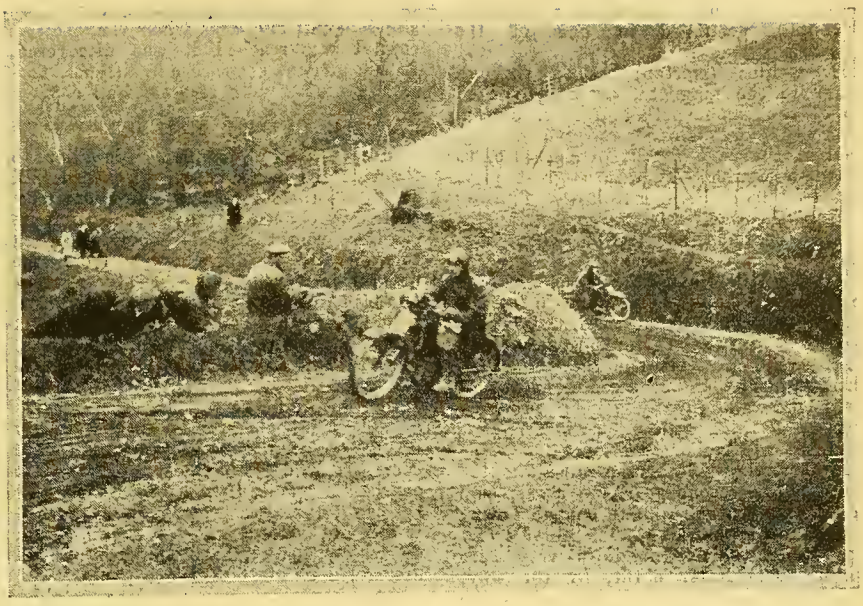
## SIXTH DAY.

**Route: Edinburgh, Broughton, Talla Linns, Cappercleugh, Moffat, Durisdeer, Tynron, Penpont, Wanlock Water, Biggar, Edinburgh.**

**Observed Hills: Talla Linns, Tynron, Blackford Hill.**

THERE had been much uncertain speculation on Friday night as to the difficulty of the last day's run, but as it turned out the terrors of the day proved to be quite different from those anticipated by the majority. Almost impenetrable rain took the place of an almost unclimbable hill, as Tynron was popularly supposed to be, and, although the number of golds lost was not very great, one or two "certainties" went the way that certainties so often go.

Since it was last included in a competition, Tynron has been thoroughly re-surfaced by the local authorities, who, far from asking the Edinburgh Club's permission, had not even notified that body of their intention!



E. A. Barnett (346 Francis-Barnett) and S. M. Greening (346 Francis-Barnett) rounding an acute bend on Glendoe, one of the two "worst" hills in the trial.

### Last Day's Early Start.

Again starting at the unpleasantly early hour of seven a.m.—which incidentally proved too early for L. Paynter (Norton), who turned up half an hour late but was allowed to start, the run degenerated into a "semi-colonial" section before the first check at Broughton, but 20 m.p.h. was only difficult to those who were troubled with punctures. Section No. 2 brought the first observed hill, Talla Linns, a flint-strewn, second-gear climb, and seven miles of colonial going, including three water-splashes. E. W. Choldcroft (349 A.J.S.) took rather a serious toss here, but pluckily carried on for the honour of his team; W. H. Hardman (499 Wilkin) also came off, but not so heavily; and W. Westwood (499

Three solo riders attacking Abriachan, an observed hill on the the third day, and this year in good condition.

**Scottish "6 Days" Described.—**

Triumph) grounded in one of the splashes.

H. Collins (Norton) retired through water in the magneto, probably picked up at the same spot; and Mrs. Jansen (Ner-a-car) was forced to give up the trial at the next check, owing, also, to magneto trouble. It was a great pity, for she had been heroically fighting against the most adverse circumstances; not the least of her troubles being two quite inoperative brakes.

Tynron Hill, fortunately, is situated in less exposed country and the rain became more desultory. What mud there was, too, was of the surface variety, and neither the gradient nor the bends are extraordinary. The ascents, however, were not all equally good; probably anxiety, coupled with Friday's terrifying rumours, was responsible.

E. S. Astley (998 Rudge sc.) attempted the climb on second gear, but a suspicion of konking warned him to change down; on the other hand, F. T. Sibley's 499 c.c. Rudge sidecar made a very sure climb. The latter outfit, by the way, had been doing very well throughout the event, although Sibley was handicapped by the loss of his rear mudguard; there was a layer of mud some inches deep on his neck before the finish.

Probably the fastest and neatest climb of the afternoon was made by J. D. Price (532 Scott), but the other Scotts were not so good, one of their riders, R. W. Stanfield, "footing" once. As usual, Carfrae (499 Rudge Multi) made a very gallant attempt, but although he lost no marks on Talla he had perforce to dismount on Tynron.

### Two Fine Sidecar Ascents.

Of all the excellent ascents by the Martinsyde outfits, W. H. Bashall's was the fastest, which means that it was very fine indeed; and, again, Cunningham was slightly faster than his P. and M. team mates.

A. L. Downie (348 Raleigh) was the first failure. Arriving very late, G. K. Hubbard (346 New Imperial) almost came to a standstill, but managed very cleverly to wriggle up, by shutting off his air with the palm of his hand. Evidently suffering from an elusive magneto defect, R. Humphries (249 Velocette), who retired later in the day, made quite an excellent climb with his engine cutting out every eighth revolution.

Then came the surprise of the day. J. A. Watson-Bourne (Brough-Superior) attempted to get up on one cylinder, the other going out of action on account of water draining down the h.t. lead to the plug; he failed, but did not take his feet off the rests until his speed was down to 0 m.p.h. Finally, Shepherd (348 O.K.), who had "lost" his bottom gear earlier in the trial, lost his gold on Tynron.

Excepting one or two sidecar passengers who were inclined to indulge in unnecessary acrobatics, the remainder displayed little anxiety.

There was another check at Penpont, and the run back to Edinburgh, over main roads, was a pleasant contrast to the outward journey. The rain soon stopped entirely, and when the Scottish capital was reached it was discovered, to the general surprise and disgust, that it had been dry there almost all day.

### The Sting in the Tail.

Most of the hills being familiar to the veterans in the entry, Blackford Hill furnished the Edinburgh leg-pullers with their only chance of putting the wind up the Southrons this year. They succeeded tolerably well, quite apart from the natural nervousness induced by a steep climb in the very last mile of a Six Days. They alleged it contained a patch of 1 in 2½; that sidecars only cleared the wall by an inch; and so forth. The rain cleared as the trial neared the suburbs of Edinburgh, and at last the riders spied an abrupt hill crowned by an observatory up which wound a hard, smooth path some 7ft. wide, looking steep enough to overbalance and topple backwards. To the right the breast of the hill was hollowed out into a natural grand stand, on which thousands of the citizens had assembled to gloat over our panic.

An imposing array of constables whistled and semaphored to the starting marshals, who sent the men up one at a time. Between whiles they tried to prevent the crowd from sliding bodily down the glazed turf on to the road, with only partial success, for many competitors climbed into an ever-retreating bottleneck of human figures. Local riders fussed about the competitors. "Sidecars *must* have lots of weight on both wheels. Passenger on the carrier or she won't drive. Driver well forward on the tank or she won't steer!"

### Not so Bad as Reported.

Actually the ascent was not half so formidable as it looked. The surface was excellent, except for a narrow paved V gully or two; and the maximum grade is probably a few yards of 1 in 3¾. Where so many failed (thirteen in all), some detailed description seems indicated. The B.S.A. sidecars scorned the hill. The Barr and Stroud engines were slow—wisely so, as later events proved. N. Downie took his Ariel up cautiously; his brother, A. L., was much faster on the little Raleigh, but his magneto was apparently exhausted by the furious burst, and gave up sparking at the summit; it was lucky that he could coast in to the last check. The four Alexander brothers, who of course know the hill well, then ascended at speed amidst delirious cheers from their many friends in the crowd. The sole surviving Dunelt romped up. The B.S.A. solo team took no risks, climbing well within their power, as did Gibson (348 Raleigh) and Choldcroft (349 A.J.S.), the latter sobered by his toss earlier in the day.

### Disappointing the Sensation Hunters.

By this time the crowd was growing a little disappointed at the men's facile conquest of an abnormal hill, but Lochhead (496 Ariel) comforted them by obviously having nothing in hand; whereupon Newey and Woodcock (992 Ariel sc.) apparently pottered up on second. Mrs. Knowles made a splendid climb, throttling down to clear a sister machine just ahead. Sibley (499 Rudge sc.) was all out. Astley on the big Rudge sidecar roared up dangerously fast, grazed the wall, recovered, began to knock, and finished sedately. Barnett (346 Francis-Barnett) came up halfway on second gear, and Graham Black (490 Norton) raced up much too fast, thrilling the crowd. Hereabouts the amazing Harper runabouts came up unofficially at speed. They were so tickled at their success that they repeated the attempt, and, to the huge delight of the onlookers, one of them missed a gear change near the foot, and disappeared backwards round the corner at speed. A series of good climbs followed—Scotts, Martinsyde outfits, Calder on the New Imperial, Philpott's Velocette, Westwood's o.h.v. Triumph. Then excitement commenced. The chain of Lewis's P. and M. sc. jumped off and he failed. A car stuck halfway up, and had to be pushed up the rest, boiling vigorously. Carfrae's Rudge Multi was overgeared; he very nearly jockeyed it up with foot-slogging, a slack belt, and clutch slip. Then Watson-Bourne attempted his usual stunt climb, but his wet glove slipped off the bar when the huge machine bucked at the gulley, and he crashed heavily on full throttle. R. B. Clark forgot to turn on his petrol after the stop at the foot, and all but got up on one float chamber full. Ramsay's Velocette had not lasted as well as its stable companion, and failed. Shepherd's O.K. had been minus its bottom gear since noon on Thursday, and did well to finish on second and top; Blackford was naturally too much for it. Other failures were the G.R.I., Gold's Francis-Barnett, Sawtell's Morgan, Evans's 348 Raleigh, and Ball's A.J.S. sidecar. But the entry as a whole had to be careful not to come up too fast.

### The Finish.

After the finish the club entertained the riders at a smoking concert in the Dunedin Rooms. The chief features were the presentation of the medals (already—by some miracle—engraved with the names of their winners), and the showing of a cinema film of the Monday's ride, including Amulree and Kenmore Hills. Speeches were commendably short, and Mortimer Batten brought down the house in replying to the toast of "The Competitors." He said they had all enjoyed the Six Days, but were jolly glad it wasn't a Seven Days.

In to-morrow's issue of *The Autocar* the performances of the light cars are described.

---

## WANTED—A NAME.

SO rapid has the development of the caterpillar track vehicle been that it is time some appropriate name was coined. Have any of our readers any ideas on the subject? It will be remembered that a short time back we described a very interesting motor cycle with endless tracks in lieu of road wheels.

# THE SCOTTISH SIX DAYS TRIALS. OFFICIAL RESULTS.

# FRUITS OF CO-OPERATION.

## Great Expansion of Raleigh Activities at Nottingham.

IT is refreshing in these days to find a factory in such a happy state of activity as is the Raleigh plant at Nottingham. Referring to the fact, Sir Harold Bowden attributed the success of the firm to the co-operation which existed between the staff and employees, which had enabled the firm to turn out high grade goods at a low figure.

At a luncheon given on Friday last to celebrate the opening of a new wing, there were present the Rt. Hon. W. C. Bridgeman, M.P. (Minister of Mines), who performed the opening ceremony, and many well-known figures in the world of wheels, in addition to some 200 members of the Press.

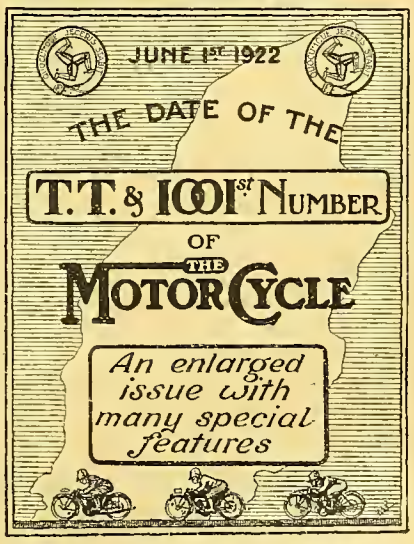
In his opening speech the Rt. Hon. W. C. Bridgeman, M.P., dwelt upon the difficulties of post-war reconstruction and the wonderful manner in which the Raleigh Company had recovered owing to co-operation, hard work, and a thoroughly efficient chief.

Others speakers were J. C. Gould, Esq., M.P., Major J. D. Barnsdale, Colonel Sir Joseph Reed, Valentine Knapp, Esq., Sir J. C. Percy, D.L., J.P., and W. G. Howard Gritten, Esq., M.P. After lunch the visitors were divided into parties and conducted round the extensive and up-to-date factory.

Although a great part of the factory is devoted to the production of Raleigh all-steel bicycles, even tubes and steel lugs being manufactured on the premises, motor cyclists found much of peculiar interest to themselves.

The Raleigh flat twin and 2¾ h.p. single-cylinder engines were to be seen undergoing bench tests. After an hour's "running in" the engines are coupled to a Froude brake, the larger engine being scheduled to produce 13.9 h.p. at 3,400 r.p.m. and the smaller 6.5 h.p. at 3,000. Frame-building to jig, liquid brazing, and coslettising processes all attracted interested spectators, and while passing through the orderly departments devoted to the manufacture of the well-known Sturmey-Archer gear, one could not help wondering if the T.T. winner's gear box was amongst the rows of boxes awaiting despatch.

A few of the leading statistics in connection with the Raleigh plant are not without interest. A gas producer plant for power, heating, and lighting has been installed, the total h.p of engines used in the factories being 2,640. The output of the factories when in full swing is up to 100,000 cycles, 10,000 motor cycles, 250,000 cycle hub gears, and 50,000 motor cycle countershaft gears.



# A PRELIMINARY CANTER.

## T.T. Mounts and Riders in Long Distance Races at Brooklands.

G. Dance (499 Sunbeam) taking the lead, closely followed by J. Emerson (496 Douglas) at the start of the Brooklands Senior T.T. race.

AT the B.M.C.R.C. May meeting on Saturday last there were really only two scenes in the picture, the Brooklands Junior and Senior T.T. races of twenty-six laps (70½ miles) and thirty laps (81½ miles) respectively. Between these two was the mere *entr'act* of a three-lap scratch race for machines not exceeding 1,000 c.c., and the meeting closed with the all-comers' passenger handicap of five laps.

Naturally, with the Isle of Man T.T. races in the offing, not a few prospective contestants in the Manx events seized the opportunity of giving their mounts a try-out on the Weybridge track. Not only was the opportunity an excellent one for the riders, but the conditions prevailing on Saturday all contributed to the thorough enjoyment of the large numbers of spectators present.

### Lightweights and Juniors.

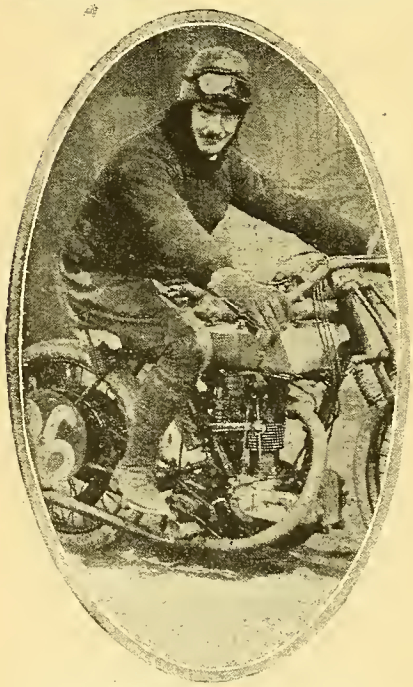
Out of thirty-four entrants in the Junior event, twenty-nine faced the starter, and it was not long before it became apparent that C. G. Pullin (346 Douglas) had the speed which had made him favourite. He was not having it all his own way, however, for a crowd of Blackburne-engined machines pressed him closely. E. Remington (349 Blackburne) was setting a cracking pace, while A. Fraser and G. H. Williams (348 Sheffield-Hendersons) both were possible winners if Pullin failed to keep his place for an instant. Meanwhile, the 250 c.c. class was in the midst of its own battle. W. D. Marchant, the Sheffield-Henderson record-breaker, was going like the wind, albeit seriously challenged by J. V. Prestwich on the 249 c.c. New Imperial, when a stone or fragment of metal was thrown up on to his oil tank and temporarily stopped his progress. Fraser also suffered a setback, his throttle wire breaking—clearly the luck of the Sheffielders was out.

Sometimes the spectacular riders gain all the attention while a steady man misses notice. King Smith, for example, was steadily pushing ahead on the 247 c.c. Morris two-stroke, and the O.K.-Juniors and New Imperial contingent were all keeping well up.

### The Pace that Kills.

After the first half-hour the stayers began to be distinguishable, as man after man dropped out. E. Longden (348 D.O.T.) suffered a fall, and his machine caught fire. J. Whalley (348 Massey-Arran) was seen no more after his third lap. Tudor Thompson (350 Douglas) rolled in with his front cover off at the fourteenth lap, and T. Eve (350 Douglas) and A. A. Swan (249 New Imperial) both stopped in their seventeenth laps, the former shedding his engine chain and the latter coming into the depots with a bad misfire.

Clearly now it appeared to be Pullin's race, for at his twenty-first lap only Remington (Blackburne) was at his heels, although Williams and Fraser (Sheffield-Hendersons), Dequin (348 Ivy), and Prestwich (New Imperial), the J.A.P. exponent, pressed uncomfortably.



A fast lightweight single. The o.h.v. 348 c.c. Blackburne and its rider, E. Remington, who won the Brooklands Junior T.T. Race by a short head at 61·63 m.p.h.

Hour Record Breaker. J. Emerson on his 496 c.c. o.h.v. Douglas after winning the Brooklands Senior T.T. Race, and breaking the 50 miles and 1 hour records, the latter at a speed of 78·91 m.p.h.

**A Preliminary Canter.—**

Then the unexpected happened. On the last lap one of Pullin's tappets seized, and his lead was insufficient to enable him to do any more on one cylinder than to run in a close second behind Remington, with Williams and Fraser third and fourth. In the 250 c.c. class Prestwich was miles an hour faster than anyone else, and finished easily a winner. Result :

CLASS A, NOT EXCEEDING 250 C.C.

1. J. V. Prestwich (249 New Imperial), 56.83 m.p.h.
2. A. King Smith (247 Morris), 48.41 m.p.h.
3. W. Handley (250 O.K.-Junior), 47.16 m.p.h.

CLASS B, NOT EXCEEDING 350 C.C.

1. E. Remington (349 Blackburne), 61.63 m.p.h.
2. C. G. Pullin (346 Douglas), 61.07 m.p.h.
3. G. H. Williams (348 Sheffield-Henderson), 59.89 m.p.h.

Other finishers:—A. Fraser (348 Sheffield-Henderson), R. Dequin (348 Ivy), H. Le Vack (349 J.A.P.), F. J. Price (350 Diamond), C. Reyersbach (349 Trump-Jap).

**A Walk-over.**

The next event, a three-lap scratch race for machines not exceeding 1,000 c.c., only attracted H. Le Vack (998 Zenith-Jap), C. F. Temple (988 Harley-Davidson), and R. N. Stewart (998 Trump); the latter's machine had a British Anzani engine. At the start Stewart got away well, but Le Vack at once took the lead, but when the banking was reached Temple had shown his form, and to all intents and purposes the race became a promenade. Result :

1. C. F. Temple (988 Harley-Davidson), 86.89 m.p.h.
2. H. Le Vack (998 Zenith-Jap).
3. R. N. Stewart (998 Trump).

Quite a number of actual machines for the Island took part in the 500 c.c. T.T. event, including Douglas, Sheffield-Henderson, Triumph, Rudge, and Sunbeam; if the majority of them meet with the same fate as they did on Saturday the Senior T.T. will prove more disappointing than it did last year; for in this track event of 81½ miles eleven machines stopped either completely or for replenishments and adjustments, and out of the field of sixteen starters only four finished in limit time.

**"Seniors" Tried Out.**

At the fall of the flag G. Dance (492 Sunbeam) and F. G. Edmond (499 Triumph) got away beautifully, but J. Emerson (494 Douglas) almost immediately showed superior acceleration and gained a lead he never lost. Pullin and Anstice (496 Douglases) came in together at their third laps—more tappet trouble, so it was said—F. B. Halford (498 Triumph) wobbled rather badly at times, and had two stops for oil—one on his fourth lap! R. E. Dicker (499 Rudge) broke a valve on his eleventh lap, and E. Scarle (499 Sheffield-Henderson), who was going really well, suffered a cruel stroke of ill-luck—the valve spring cup shearing out its centre, allowing the valve to drop into the cylinder. J. Connor (482 Scott) was gradually improving his speed, but oiled a plug on the ninth lap; subsequently he settled down to a steady "63," and kept it up. H. Nicholson (496 Martinsyde) met his Waterloo in valve trouble at his thirteenth lap. Sheraton (490 Norton) and Wallace (496 Duzmo) were consistent but slow.

**Flat-twin Leading the Field.**

When Dance (Sunbeam) and Woodhouse, Halford and Edmond (Triumphs) had completed their tenth laps, Emerson's Douglas was screaming along in its eleventh circuit—clearly he had the pace to win. When two-thirds of Emerson's race was over Dance had disappeared, and at the start of his last lap Halford, Edmond, Gayford (496 Douglas), Connor (Scott), and Sheraton (Norton) were respectively four, five, six, eight, and eight laps behind him; and his luck, speed, and fine riding all held good. Result :

1. J. Emerson (496 Douglas), 78.93 m.p.h.
2. F. B. Halford (498 Triumph), 68.89 m.p.h.
3. F. G. Edmond (499 Triumph), 66.79 m.p.h.

Also finished:—V. Gayford (496 Douglas).

**Emerson Breaks Hour Record.**

During the race Emerson broke the fifty-mile British record for fifty miles in 38m. 5.07s. (78.77 m.p.h.); also the hour record, covering 78 miles 1,601 yards at a speed of 78.91 m.p.h.

**The Passenger Handicap.**

Last on the programme was a five-lap passenger handicap for sidecars and two-seated cycle cars. Handicap events at Brooklands are a hopeless confusion to watch. With such things as the limit man starting his third lap as scratch leaves the mark it is almost impossible to gauge the progress of the race. Result :

1. O. de Lissa (994 Motosacoche sc.), 68.90 m.p.h.
2. G. F. Bainbridge (745 Martinsyde sc.).
3. H. Le Vack (996 Zenith-Jap).

There were fourteen starters.

# A.C.U. AND THE TRADE.

## Influence of Manufacturers and Safety in Trials Discussed at Motor Cyclists' Parliament.

IN the movement for the adoption of the reports of various Management Committees, proposed by Prof. Low at the second general Committee meeting of the A.C.U. on Friday last, a paragraph which read as follows : " Agreed to recommend appointment of a joint committee with the trade to make recommendations on any matter as to which there might be difference of opinion as between the A.C.U. and the B.C. and M.C.M. and T.U., Ltd." (commonly known as the Motor Cycle Manufacturers' Union), was criticised by Mr. K. S. Topping.

Mr. Topping thought that such a joint committee was undesirable, as it inferred a possibility of an excess of trade influence in the Auto-Cycle Union. The Chairman pointed out that the idea was merely to get the opinion of the trade; it would certainly not tend to cause the trade to influence unduly or dominate the A.C.U., and Mr. S. L. Bailey declared it was the sole desire of the Manufacturers' Union to work in unison with the A.C.U.

Arising out of a matter appearing in a Management Committee's report, Mr. B. Marians asked if every effort had been made to persuade the insurance companies not to increase their premiums. The Secretary replied in the affirmative.

Prof. Low then moved the adoption of the h.p. rating sub-committee report, which, as was recently reported, recommended that the horse-power of motor cycle engines should be equivalent to 1 h.p. per 100 c.c. capacity.

A member then asked if the A.C.U. was aware that motor cycle insurance costs were based on the manufacturers' stated horse-power and that the new rating might result in still higher premiums.

The Secretary assured the meeting that the matter had not escaped the Union's notice. The report was then adopted.

Mr. J. W. G. Brooker then moved the various reports of the Competitions Sub-committees. Referring to these, Mr. Alec Ross called attention to the sportsmanlike attitude of the Manx M.C.C. in withdrawing their proposed amateur race.

**To Safeguard Competitors and Spectators.**

Major Vernon Brook then proposed : " That the A.C.U. steward for any open events shall be taken over the course the day before the event, or on some preceding day, in order that he may cut out any part of the course which he may consider unsuitable, either from the point of view of danger to competitors, or unsuitability for an open event held under A.C.U. rules."

Mr. J. N. Longfield stated that he thought that the adoption of such proposals would infer that the A.C.U. was interfering too much, and that the matter should be left to the stewards of the meeting.

Mr. S. L. Bailey and Mr. Dawes spoke in support of the last speaker, while Mr. T. Rutherford also opposed the motion.

The motion was finally withdrawn, to be submitted to the competitions committee, which, the proposer said, " should only issue permits on condition that the public and competitors should be safeguarded."

Correspondence from the Rev. J. M. Philpott was then read. In this he referred to anomalies in the titles of certain Centre trials, which led people to believe that these were organised by the A.C.U. and not by the centres. It was agreed that in the announcement of such events the centre's name should appear first.

## BRITISH RIDER WINS LIEGE HILL CLIMB.

At the Liège international hill climb last week-end G. S. Boston (349 A.J.S.) secured the two premier awards, the John Bull cup and the cup presented by the Belgian journal *La Wallonie*.

# CLUB NEWS.

## Activity in Clubland. Many New Clubs.

### Bath and West of England M.C.

Members of this club recently gave an outing to 200 patients of the Ministry of Pensions Hospital, fifty vehicles being used.

### Bohemian M.C.C. (Southampton).

Owing to the retirement of Mr. Gunnell, Mr. F. W. Kirby, of 28, Norfolk Road, Southampton, is now the secretary of the club.

### A New Club at Thetford.

A motor club is being formed at Thetford, Norfolk, with Mr. F. G. Edmonds, Edmonds' Motors, Norton House, Thetford, as secretary.

### South Wales Centre (A.C.U.).

So as to avoid clashing with the T.T. races, the South Wales Centre has decided to hold its one hundred miles race on Pendine Sands in July. This will allow T.T. competitors to take part.

### Clitheroe and District M.C.C.

The radius governing membership to the above club has been extended from four miles to eight miles, and the secretary will be pleased to hear from any new prospective members. The membership fee is 7s. 6d.

### A New Birmingham Club?

A number of motor cyclists in North Birmingham, Walsall and District are about to form a motor-cycle club, which it is proposed to organise on unique lines. The hon. sec. (pro. tem.), Mr. W. C. Baker, of 3, New Street, Birmingham, will be pleased to forward particulars on request.

### Bishop Auckland and District M.C.

An entry of 75 was received for this club's recent hill-climb, which was witnessed by over 1,500 spectators.

The results were as follows :—

500 c.c. Class.—1, C. W. Smith (3½ Sunbeam), 34⅘sec.; 2, B. Gummerson (o.h.v. Triumph), 39⅕sec.

Sidecar Class, 500 c.c.—1, Percy Bell (2¾ Dot), 60⅕sec.

2¼h.p. Class.—1, Foster (Velocette), 52 sec.; 2, H. Chilton (Royal Enfield), 66 sec.

2¾h.p. Class.—1, Percy Bell (Dot), 43 sec.; 2, Joyson (Invicta), 49 sec.

### Bristol M.C. and L.C.C.

The Second "Mystery" Trial was held over a 40-mile course around Bath, and took the form of a speed-judging contest, there being seven sections to be run at schedule speeds, which varied from 23 m.p.h. to as slow as 6 m.p.h., the latter being two miles of level road, non-stop. There were 32 starters. Result :—

1st and Secretaries' Cup.—E. Spencer (3½ Douglas), 5 min. error.

2nd, Silver Medals.—Four tied, 6 points error. A. B. Fuller (3½ Douglas), A. E. Tozer (3½ Rudge sc.), F. Wheeler (4½ Ariel sc.), — Laurence (Douglas).

The King Cup event, of May 20th, has been postponed to June 17th, to avoid clashing with the South-Western Centre open event.

## Week-End Club Events.

*May 11th.—Kelso and District M.C.C. Social Run and Picnic (with Berwick M.C.).*
*May 11th.—North Wales M.C.C. Fast and Slow Hill Climb.*
*May 11th.—Gloucester M.C. and L.C.C. Visit to Douglas Motor Works, Bristol.*
*May 11th.—Mid Bucks M.C.C. First Trophy Run.*
*May 13th.—Essex County and Southend A.C.—Acceleration Test.*
*May 13th.—Reigate, Redhill and District M.C.C.—Hill Climb.*
*May 13th.—Coventry and Warwickshire M.C.—South Birmingham M.C. Trial (Centre).*
*May 13th.—South Birmingham M.C.C.—Trial open to the Midland Centre.*
*May 13th.—Woolwich, Plumstead and District M.C.C.—South Eastern Counties Inter-Club Team Trial.*
*May 13th.—Sheffield M.C.C.—Picnic, Cutthroat Bridge.*
*May 13th.—Coventry Triangle Club.—Run to Little Packington.*
*May 13th.—Eastbourne and District M.C.C.—Woolwich, Plumstead and District M.C.C. Team Trial.*
*May 13th.—West Kent M.C.—Night Trial.*
*May 13th.—Croydon and District M.C.C.—Hill Climb.*
*May 13th.—Coatbridge, Airdrie and District M.C.G.C.—Flying Half Mile (Open).*
*May 14th.—Bradford M.C. and L.C.C.—Wilson Cup (No. 2).*
*May 14th.—Essex M.C.—Picnic and Old Crocks' Hill Climb.*
*May 14th.—Colne and District M.C.—Run to Ingleton.*
*May 14th.—Leeds Motor Union.—Run to Castle Howard and Kirkham Abbey.*
*May 14th.—Manchester Motor Club.—Social Run.*
*May 14th.—Lune Valley M.C.C.—Reliability Trial for Elms Trophy.*
*May 14th.—Wolverhampton M.C.C.—Social Run.*
*May 14th.—Wallington and District M.C. and L.C.C.—Social Run.*
*May 14th.—Bridgnorth and District M.C.C.—Run to Stourport.*
*May 14th.—Rochester, Chatham and District M.C. and L.C.C.—Run to Secret Hill.*
*May 14th.—Exeter M.C. and Junior C.C.—Run to Lustleigh Cleave.*
*May 14th.—Prestwich and District M.C.—Half-day Reliability Trial.*
*May 14th.—Bulwell M.C.—100 Miles Reliability Trial.*
*May 14th.—Barrow and District M.C.—Hill Climb.*
*May 14th.—Coventry Triangle Club.—Run to Warmington.*
*May 14th.—Sheffield M.C.C.—Run to Ashover and Matlock.*
*May 17th.—Kelso and District M.C.C.—Speed Trial.*
*May 17th.—Leeds Motor Union.—Impromptu Run from City Square.*
*May 17th.—York and District M.C.—York Races.*
*May 18th.—Bulwell M.C.—Run to Belper (River Gardens).*
*May 18th.—Worcestershire M.C. and District M.C.C.—Opening Social Run (Official Visit to Morgan Motor Works).*

### Bridgnorth and District M.C.C.

A change of secretary has been made by the above club, Mr. D. Wilkinson, St. James's Villa, Bridgnorth, now officiating.

### Wolverhampton M.C.C.

The results of this club's first trial of the year, held on the 30th ult., are as follows :

1st.—E. Wheeler (4¼ Sunbeam sc.), total error 19⅘sec.

2nd.—R. S. Hill (2¾ H.B.), total error 21sec.

3rd.—Dr. R. S. Harvey (8 Matchless sc.), total error 36⅖sec.

1st Lady.—Miss E. M. Watton (2¼ Velocette), total error 7min. 2⅘sec.

E. Wheeler also won the Corke Silver Cup, Sheppard Silver Cup, and two Gold Medals; R. S. Hill, a Club Silver Medal; Dr. Harvey, a Club Bronze Medal; and Miss E. M. Watton, a Club Silver Cup.

### Lichfield and District M.C.C.

The adjourned general meeting was held on April 21st at the Swan Hotel, Lichfield, when the officers for 1922 were elected. The honorary secretary is Mr. H. Hoskison, jun., Fradley, Lichfield.

### Uxbridge and District L.C. and M.C.C.

For the Bayliss Cup event at the end of last month a fixed gear trial was arranged which included a starting test. The course was one of approximately fifty miles, and included nothing in the way of freak hills. The winner was A. H. Milward (2¾ Wooler) with a loss of only three marks.

### Sheffield and Hallamshire M.C. and L.C.C.

Members of the above club ran to Nottingham in glorious weather for the purpose of visiting the works of the Raleigh Cycle Co., Ltd. The party were shown the processes of manufacture employed in making cycles, motor cycles, and gear boxes, and a most enjoyable and instructive time was spent by all who participated in the run.

### Sunderland and District M.C.

Favoured with perfect weather, over three thousand spectators attended the recent hill-climb at Tunstall Hope Hill, which was in better condition than it has been for years, consequently the times were the fastest on record. Results :

350 c.c. Class.—1, J. T. Jabbora (2¾ Sunbeam), 19⅗sec.; 2, H. L. Young (2¾ A.J.S.), 20½sec.

600 c.c. Class.—1, F. Turvey, Jnr. (o.h.v. Triumph), 17½sec.; 2, J. Kish (3½ Sunbeam), 17⅗sec.

Unlimited.—R. Loughtou (3½ Douglas), J Kish (Sunbeam), tied, 17⅗sec.

### North Wales M.C.C.

On the last Thursday and Saturday in April the club held a petrol consumption test. There was a fair entry, and competitors were supplied with one pint of petrol and were required to travel from Denbigh to Colwyn Bay and back, or as far as the spirit would carry them. All tanks were sealed. The provisional results are : 1, W. Edwards (2¾ New Imperial), figure of merit 79.6, m.p.g. 189.6; 2, J. H. Davies (3½ Sunbeam), figure of merit 68.5, m.p.g 132.8; 3, L. S. Jones (3½ B.S.A. sc.), figure of merit 58.5, m.p.g. 75.2.

### Ayr M.C.C.

A hill-climb was held on Holm Brae, Dundonald, on Saturday, April 15th. It was run on the knock-out principle, and as a large entry competed some fine finishes were witnessed. The results were :—Two-stroke class, A. Marr (2½ Victoria); 500 c.c. R. P. Lees (3½ Rover); 500 c.c., experts barred, J. A. L. Sangster (3½ N.U.T.); 1,000 c.c., Jas. Allan (3½ Douglas); 1,000 c.c., experts barred, A. F. Aberdein (3½ Sunbeam).

An open hill-climb willl be held on May 27th. Entry forms may be had on application to Thomas Gilchrist, Ashgrove Street, Ayr.

# Tube Protector

## No More Punctures!

You will never again be stranded with a punctured tyre—never again dread bits of glass, flint, and nails, if you fit the **TUBE PROTECTOR.**

The Tube Protector is a flexible layer of thin pieces of hard metal (arranged as in a coat of mail) enclosed in canvas, and fits between the outer cover and the inner tube of your tyre. No matter what sharp matter pierces the outer cover, it cannot penetrate the Tube Protector —cannot possibly pass through to the inner tube.

The Tube Protector is easy to fit, is light in weight, and causes no friction. It allows you to wear down the outer cover to almost nothing. Think of the saving in time, money, labour, and patience.

Ask your dealer to fit TUBE PROTECTORS to your motor cycle tyres.

# *What you want and How you want it*

It is a great convenience to find in our showroom a selection of motor cycles embracing such a variety of models that you can with ease select one which exactly suits your requirements.
It is also pleasing to find that you can suit your own convenience in buying it and that you are saved all the bother of Registration and other formalities.
If you have a machine to dispose of before getting a new one it simplifies matters if you can effect an exchange, or should it be inconvenient to pay cash for your purchase it is nice to be able to arrange for settlement in a way that suits you.
All these advantages and many others are yours if you send your enquiry to

**THE EASTERN GARAGE CO.**

MANUFACTURERS' STOCK

MAKINKOT BRAND

*TO BE CLEARED.*

Fawn double texture, interlined rubber,

MOTOR SUITS

THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped, making these absolutely waterproof.

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind cuffs

The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

# AMAZING OFFER!

# SPEED

## 80 m.p.h.

**Guaranteed by Brooklands Certificate.**

# DOUGLAS SPORTS MODEL

## Timed by Mr. C. G. PULLIN.

I have been successful in completing arrangements with Mr. C. G. Pullin, the 100 m.p.h. record holder, to tune up a limited number of 3½ h.p. Sports Models. These machines will be passed at Brooklands, and arrangements have been made with the timekeeper to certify the speed of each and to issue a certificate. Mr. Pullin's retaining fee is exceptionally high and obviously above the pocket of the average purchaser. However, I have decided to spread the cost over a number of machines, charge it to publicity and make only a nominal charge to purchasers for timing, carriage to Brooklands, track fee, certificate fee, etc.

The cost will be **£3,** which, with the new price of the Sports Model at **£115,** gives you the fastest 3½ h.p. in the world at the lowest price of all for the Sports Model.

**REMEMBER** The Douglas Sports has detachable and interchangeable wheels, two shock absorbers, 650 × 65 tyres, all-steel lug frame, reliable brakes, and is also a real touring 'bus, with kick starter, 3-speed gear handlebar, control clutch, all lamps.

**REMEMBER** only a very limited number of PULLIN TIMED MODELS will be sold.

**REMEMBER** you can win any speed event against the "cracks" at 80 miles per hour.

Write about my special offer of 1922 2¾ h.p. 2-speed models, 55 miles per hour, at **£69.**

*W. G. Coram*

**THE DOUGLAS SPECIALIST AND OFFICIAL AGENT,**
**140, VICTORIA STREET, BRISTOL**
*(Late Douglas Motors, Ltd.)* *Tel. 3792*

**E.I.C.** Magneto Service Depot for West of England. All spare parts for any model by return.

**A.C.U.** Official Repairer. Any repair finished in one week. Any spare part by return of post.

**Any spare part for any model Douglas or Williamson from 1908 upwards by return of post without fail. Douglas Repairs completed, including a complete rebuilding and enamelling in seven days.**

BASTONES for Sidecar Chassis, underslung £7/19/6. tandem chassis £14/10, auxiliary arms 14/-.—228, Pentonville Rd., King's Cross, London, N.1. 'Phone: 2481 North. 'Grams: Bastones, London. [6049

SCOTT Sidecar, bargain; £5/10.—Grey and Levin, 5, The Boulevard, Balham, S.W. [4898

# Your Pillion Passenger

will also appreciate the advantages afforded by

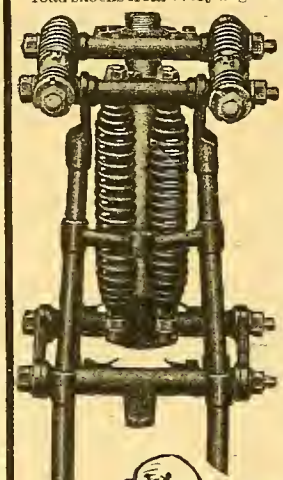
## The BRAMPTON Bi-Flex SPRING FORK.

whilst you will be relieved of all anxiety for her safety and comfort.

By reason of its exclusive dual action and the unique combination and arrangement of coil springs—acting in compression—the Brampton Bi-Flex Spring Fork provides a revelation in how luxuriously comfortable motor cycling can be made.

The liberal margin of strength which the springs of the Brampton Bi-Flex possess in excess of any possible road requirement ensures that the initial high standard of efficiency of the Fork is maintained in use.

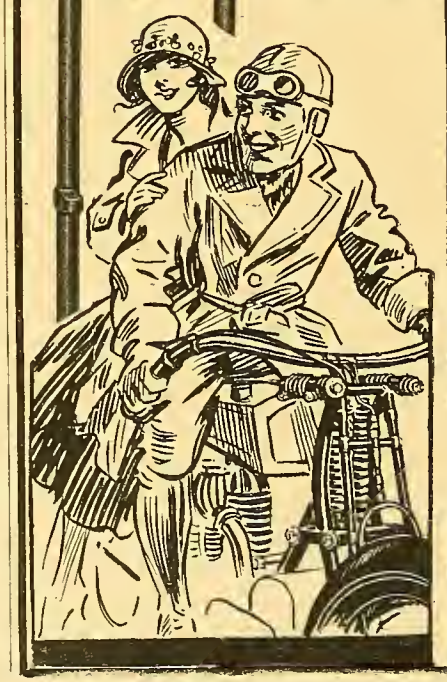
The Brampton Bi-Flex Spring Fork never tires—is always instantly responsive to, and completely absorbs within itself vibration and road shocks from every angle at which resistance is encountered.



Insist upon your new machine being fitted with the Brampton Bi-Flex Spring Fork.

Measurement forms and descriptive booklet illustrating models for motor cycles, from 2¼ h.p. and upwards, may be obtained on request.

**Brampton Bros. Ltd., Oliver Street, Birmingham.**



## SIDECAR ATTACHMENTS.

TRITUBE Sidecars are most unique. Scientifically designed, made of finest materials.

TRITUBE Chassis, constructed of steel lugs, straight steel tubes, with welded joints.

TRITUBE Sidecars are light. Supplied with either sporting or touring coachbuilt bodies.

TRITUBE Sidecars. One price, £15/10. Write for booklet.—Davis Bros., Church St., Rickmansworth. 'Phone: 5. [4195

CAMBER Utility Models; £25.—Bright and Hayles, 78, Church St., Camberwell, London.

CAMBER Utility Tandems; £27.—Bright and Hayles, 78, Church St., Camberwell, London.

CAMBER Semi-touring Models; £18/10.—Bright and Hayles, 78, Church St., Camberwell.

CAMBER Bulbous Back Models; £19/12/6.—Bright and Hayles, 78, Church St., Camberwell.

CAMBER Lightweight Models; £16/10.—Bright and Hayles, 78, Church St., Camberwell.

CAMBER Hexagon Sports Models; £25/17/6.—Bright and Hayles, 78, Church St., Camberwell. [8023

LIGHT Montgomery sidecar, complete, re-enamelled, new body; £12/10.—Houchin.—Below.

MONTGOMERY Sidecars from £17/10; sporting model in stock; trade supplied; district agent.—R. G. Houchin, 189A, High St., Peckham, S.E.15. [5976

9 GNS.—Lightweight Henderson, complete, as new.—Smith's, 86, Chalk Farm Rd., N.W.3. [5414

SIDECAR, good condition; £7; room wanted.—Platts, 602, King's Rd., Fulham, S.W.6. [5475

CANOELET Minor Sidecar, complete, good condition; £10.—Barker, 10, Algernon St., Grimsby. [5039

CANOELET Roomy Coachbuilt Sidecar, 4-point, off Sunbeam; £8.—Torrome, 10, Cathcart Hill, N.19. [5074

CANOELET Sidecar, first-class condition, only 400 miles; £13/10. — Box 1237, c/o *The Motor Cycle*. [4933

MONTGOMERY, 2-seater green sidecar body, new condition; £12.—42, Ealing Park Gdns., South Ealing. [4846

6 h.p. Enfield Sidecar, £8/10; also 3½h.p. Rudge-Multi Combination; £49.—21A, Brent St., Hendon. [4873

GLORIA Chassis, 4 fixings, petrol carrier, tyre, etc., off Triumph; £5/10, offers.—Stuart's Garage, Methven [4716

A.B.C. Sidecar, hood, screen, lamp, excellent order; £25, carriage paid, or offer.—Howdens, Seedsmen, Inverness. [5140

BOOTHS Blackpool Bargains.—Limited number, new coach bodies, full size, with locker, £5/17/6; usually £9/10.

BOOTHS Blackpool Bargains.—New £9/10 coach bodies for £5/17/6; illustration free.—Booths Motories, Blackpool.

BOOTHS Blackpool Bargains.—Quantity new underslung chassis, 4-point attachment, £9/19/6; illustration free.—Booths Motories, Blackpool.

BOOTHS Blackpool Bargains.—Several shop-soiled sidecars, cheap; Hercules coach sidecar, £9/10/6; ditto Canoelet, £8/10/6 ditto Farlow, £8/10/6; cane body, 22/6.—Booths Motories, 294, Waterloo Rd., Blackpool. [5061

SIDECAR Chassis, underslung, suit Douglas, with new cover and tube; £5/10.—Allison, 46, Church Rd., Acton. [5332

MONTGOMERY coach-built Sidecar, almost new, fit 4h.p. Douglas; £12/10.—64, Framfield Rd., Hanwell, W.7. [5491

MONTGOMERY Sidecar, No. 2, cost £27; £15, off Triumph; original tyre.—Newman, Watton Place, Hertford. [5588

£6/10.—Red Coach Sidecar, all connections; guaranteed new condition.—61, Ambleside Drive, Southend-on-Sea. [4874

WHITLEY Sidecars, Coventry.—Three models, £25, £29/10, £32/10. Nothing on one wheel to equal. Lists free. [0856

SPORTING Middleton, painted black, little used; accept any reasonable offer.—Millward, 26, Rutland Court, S.W.7. [4706

COACHBUILT Sidecar, underslung, well upholstered, good condition, 4-point attachment; £8.—Bennington Park, Stevenage. [4765

MILLS-FULFORD Sidecar, fully underslung, 650x65, 6h.p. touring; any time; £7.—152, Crystal Palace Rd., E. Dulwich, S.E.2. [5038

BRAMBLE Touring Sidecar in good condition, complete with all connections; £8.—26, Tulse Hill, Brixton. 'Phone: Brixton 1292. [5809

SPORTING Reanoe Coachbuilt Sidecar, excellent condition, purple and gold; £11; after 6.—51, Arodene Rd., Brixton Hill. [594

## The Influence of Car Design.

FOR the first time on record interconnected front and rear brakes will be used in the Tourist Trophy races. Backed by the fact that this innovation has been introduced by a firm with a high reputation and wide racing experience, this step is of peculiar interest. It has often been remarked that developments in automobile practice exert an important influence upon modern motor cycle design. Here is another example to the list already quoted. In the car world four wheel braking systems are becoming increasingly popular, especially on high-powered cars of leading rank, and the adaptation of an equivalent system for two wheelers introduces great possibilities for the future. The type of brake and amount of leverage utilised are of the utmost importance, but the advantages of checking both wheels when a hurried stop is necessary are too obvious to need emphasis on our part. Just as the rear brakes of cars first come into operation, retardation of the front wheels following, the motor cycle system is similarly arranged. It is not improbable that a similar system will be developed for touring cycles, as it would be particularly valuable where heavy sidecar outfits are concerned.

## Why Not Three Cylinders?

AMONG motor cycle designers, undoubtedly there is a revival of interest in engines having more than two cylinders. This is perhaps a natural sequel to the remarkable development of the small-capacity single-cylinder engine. As our readers are aware, this type of engine has been fostered by *The Motor Cycle* and brought to a high stage of efficiency by the 250 c.c. class in the Tourist Trophy races—a class which, prior to this year, has competed for the trophy presented by this journal, but which now enjoys a Tourist Trophy of its own.

Post-war T.T. races have proved that engines of quite small capacity are capable of fulfilling all the demands placed upon them; hence designers are considering multi-cylinder engines in order to obtain a more even torque than is possible with engines of the single- and twin-cylinder type.

Several firms have been experimenting for some time with four-cylinder machines, and several more have designs on paper, while the four-cylinder two-stroke described in our issue for February 23rd takes development one stage further.

But why four cylinders? The two most popular types of engines in use at the present time are two- and four-stroke single cylinders. A four-cylinder two-stroke provides eight impulses to the single-cylinder four-stroke's one, and the single-cylinder two-stroke's two. Motor cyclists will be quite content for the present with a torque equal to a six-cylinder car engine. A three-cylinder two-stroke will provide such a torque. Probably manufacturing difficulties attendant upon the production of a three-throw crankshaft with throws set at 120° preclude its consideration as a commercial proposition. But the three cylinders need not be in line.

As a compromise the three-cylinder radial engine has many advantages, since it can be made lighter and cheaper, and if set across the frame it is more easily cooled. Where two-strokes are concerned the three-cylinder radial with double diameter pistons is a simple, cheap, and easily cooled proposition, and would provide three evenly spaced impulses per revolution.

Developments in multi-cylinder engines will be eagerly awaited by a large section of the public, and we shall not be surprised if more is heard on the subject before the year is out.

An index to the advertisements in this issue will be found on the page facing the back cover

## Life's Little Worries.

MY machine, being a speedster, was naturally unprovided with a magneto shield. Its magneto, being "waterproof," was naturally unprovided with any device to prevent dirt and water from penetrating the enormous and tight-fitting bush in which the timing lever works (beg pardon, should work). The owner, being lazy, had naturally omitted to caulk the circular gap at the weather end of this bush with vaseline, as all good motor cyclists do. The weather, being British, was naturally wet with an unparalleled wetness. The occasion was a big trial—at least, the fifty-ninth minute of the eleventh hour of the eve of the trial. The ignition thus became fixed instead of variable. The engine was of the rather extra hot stuff order, *i.e.*, it conks bitterly at anything under 40 m.p.h. unless the ignition is well retarded, and it overheats to a rich plum colour if you run it with the ignition permanently retarded. It took two capable men two hours to get that timing lever working nicely. I wonder why magnetos continue to be made with bushes which seize at such slight provocation; why they are called "waterproof" in spite of this weakness; and why apparently knowledgable manufacturers continue to mount such magnetos where a destroyer carries its ram. Yes, the gap is *full* of petroleum jelly now, thank you.

## Don't Laugh.

MESSRS. PONK-PONK went into liquidation, and their assets were purchased by Road Destroyers, Ltd. Before this interesting transaction, Mr. Smith purchased a 3½ h.p. Ponk-Ponk, which was not unsatisfactory if we except the rear hub, the defects of which were partly responsible for the liquidation. Road Destroyers, Ltd., presently advertised their revised edition of the 3½ h.p. Ponk-Ponk as being absolutely it, and Mr. Smith noted that the new model boasted a different hub. He communicated with them at Christmas, and they covenanted to fit a new pattern hub to his back wheel, which was immediately dispatched. A deep silence then brooded over Messrs. Road Destroyers, Ltd., broken only by a brief note at the end of February to the intent that castings were expected shortly. After that, silence brooded for another two months, and, indeed, is still brooding. Poor Smith is professionally compelled to motor daily. In the early stages of the affair, while he yet lived in hope, he hired a car from day to day. Later, becoming mildly pessimistic, he bought a second-hand W.D. Douglas. He now writes to me to inquire:—

i. What is the most remunerative way of disposing of a 3½ h.p. Ponk-Ponk with only one wheel?

ii. Whether there is any justice in England by which he can exact a lingering and exquisitely painful revenge from Road Destroyers, Ltd.

I don't often talk Latin, but the following line is said to be untranslatable, and it just fits this tragedy:—

*Sunt lacrimæ rerum, et mentem mortalia tangunt.*

## Engines Going "Fey."

SEVERAL readers contribute instances of engines going "fey," and two or three of the experiences were with Rudges, like the incident originally quoted. One modest reader, describing himself as "a novice of two years' standing" (I know *lots* of experts of one year's standing), had a Rudge keep up 40 m.p.h. on the throttle, which usually produces 15 m.p.h.; his solution is rarefied air on a lofty road. Another Rudgeite uses rather a dirty fuel distilled locally and containing occasional brown crystals of naphthalene; he considers that his compression is too high for his normal load, and that the "mad minute" occurs when a flake of carbon gets on to a valve seating and reduces the compression to the ratio which chances to be ideal for the work in hand. Veteran riders will remember more than one prehistoric engine which pulled better under full load if a deft tweak were given to the valve lifter. But I cannot say that either solution really satisfies me. Any more?

## Won't Steer.

AN unhappy reader enquires why his new machine—of first-class make—evinces a marked tendency to shoot across the road against his will, prefers the crooked path of wobbledom to the straight course, and lies down incontinently at the sight of a spot of moisture on the tar. Knowing the machine in question to be impeccable as a general rule, I can only make one or two suggestions. Either there is something radically amiss with his steering-head bearings, which should be immediately inspected by a capable mechanic, or else—if the machine has misbehaved since delivery—the frame was possibly bashed about by the railway company in transit. Some years ago I signed at a railway station for no less a machine than a Norton, and when I took the road I found it all but unsteerable. Thinking I was sickening for D.T. I put a friend up on her, and he returned from a *very* brief trip with numerous grey hairs. So we cocked our respective eyes along the frame, and found

*Ixion's "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.*

**casional Comments.—**

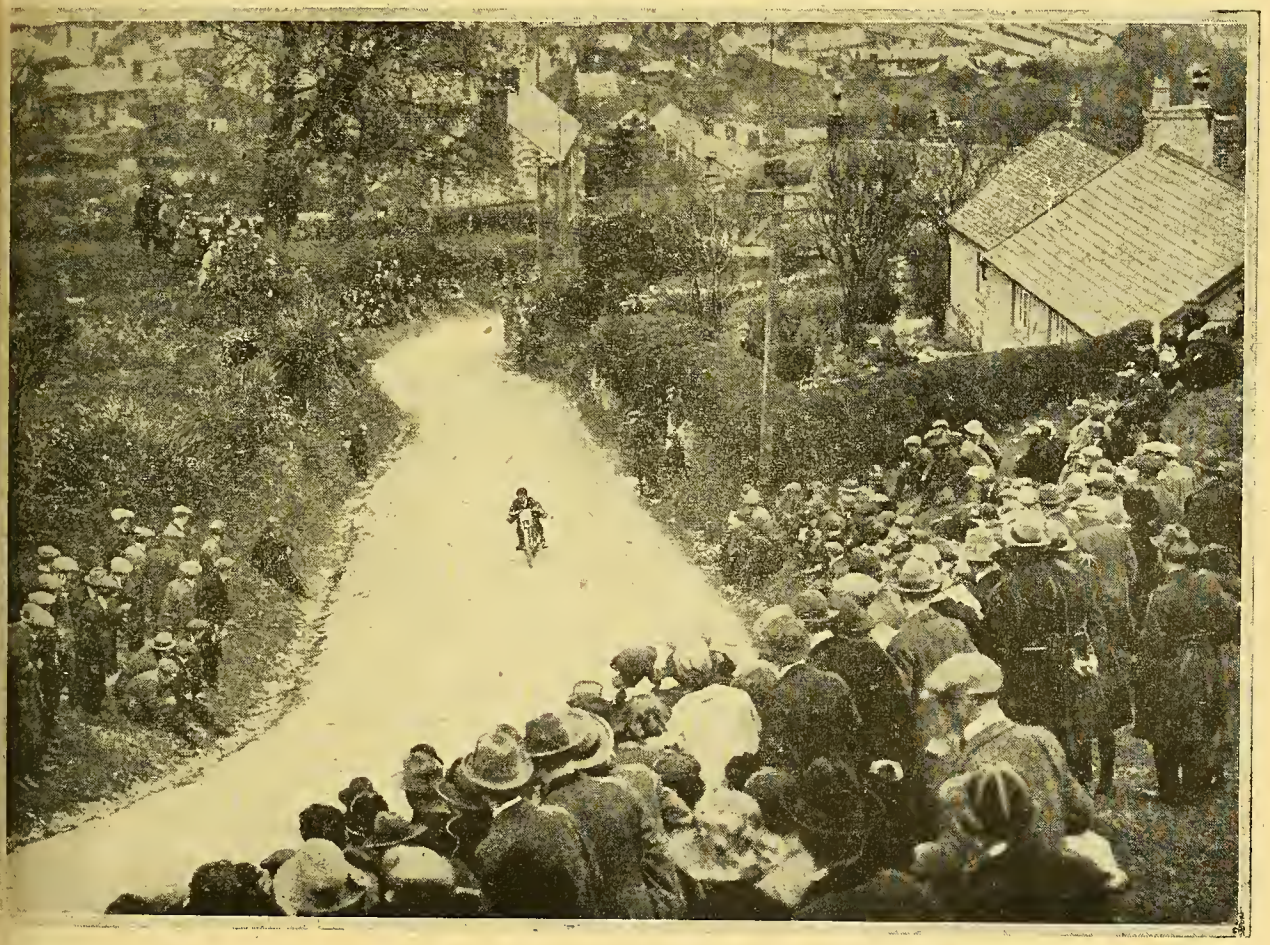
hat the front wheel was heeling hard over for a speed rner to the right whilst the rear wheel was evidently ying to beat all records round the right-hand hairpin Porlock; moreover, the two wheels were well out f track. Now nobody would suspect Norton's of de-vering one of their seventy-milers in that kind of me. If their frame-builders ever slip up, their testers e to the needful. The deduction was irresistible—e railwaymen had been rather petulant in handling hat is not a lightweight. Norton's met me very hand-mely in the matter, and I daresay my correspond-nt's makers will do as much for him if he can lay is hand on his heart, say that he has never had a ss, and that the machine was erratic when it stepped ut of the guard's van.

## Bonnie Scotland!

THE Scottish Trials remind me of those far-off days when I was young enough to compete in them. One night at a crowded hotel I shared bed with a braw Scot. We were roused at 5.45 a.m., nd the operation of dressing was, naturally, mingled ith curses. "Have a wee nip?" said my room-mate, proffering a corpulent flask. I declined (for the illumination of Scottish readers let me explain that Southrons seldom imbibe strong waters at 6 a.m.). The Scot looked extremely puzzled for a moment—he could not conceive why anybody should decline good whisky at any hour. Then a sudden smile of comprehension illumined his features. He made a fresh dive into his bag and produced a smaller flask containing Kümmel. When I again declined, he ceased to know me. (For the edification of Southern readers, let me explain that Kümmel is the Scot's next morning remedy for a neet which was ower Scotch.)

## Bad Consciences.

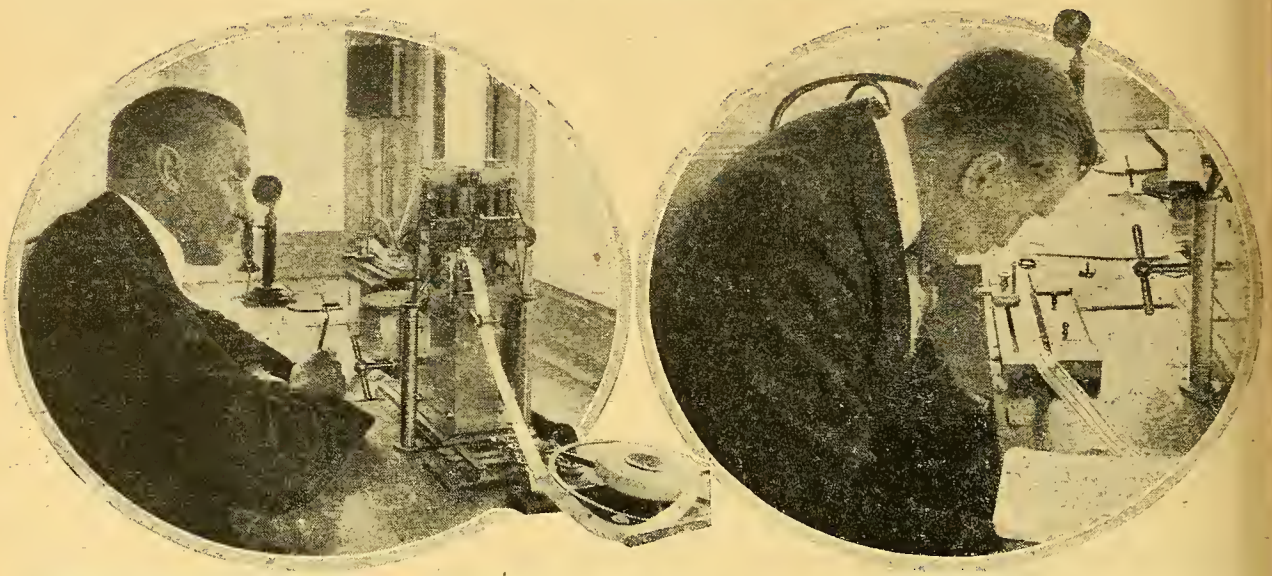
AS a rule I am the kindliest of men. Normally I am capable of just three emotions—fear, amusement and love. But for once I dipped my pen in wormwood, viz., on April 6th, anent a reader who found his engine had become so obsolete in eighteen months that spares were already unobtainable. Hear the amusing sequel. The managers of three separate repair departments wrote to me privily, enquiring if they were the culprits. But the actual offender did not write; he is still slapping the pocket which holds his nefarious gains.



Public interest in hill climbing contests is getting more pronounced, for whenever a meeting is held in fairly close touch with a populated district bigger crowds than ever gather. H. H. Jones (349 c.c. A.J.S.) making a good climb in the Liverpool M.C.'s recent hill climb at Pen-y-Ball, Holywell.

# TIMING HIGH SPEED RECORDS.

## Over Short Distances Modern Machines Demand Great Timing Accuracy. A Description of the Brooklands Electrical Timer.



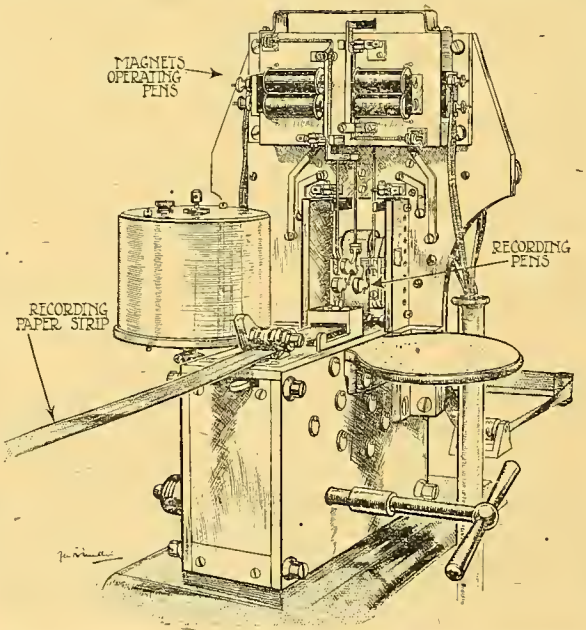
TIMING A BROOKLANDS RECORD ELECTRICALLY. (Left.) The tape passing through the recording machine. (Right.) Measuring the markings by vernier and magnifying glass.

PEOPLE closely connected with speed performances in the motor cycle world have long realised that for the modern high speed records hand-timing by stop watches is quite inadequate. Stop watches usually have subdivisions of the second to no smaller degree than the fifth, and with this comparatively crude measurement of time it is really surprising that such accurate results are obtained. Of course, it is obvious that there is no guarantee on which particular one-fifth the chronograph hand will stop when a time is taken. Supposing a motor cyclist takes 37.2s. to cover a mile; if the timekeeper should be one-fifth second late in stopping the watch as the line is crossed there is a resultant error of over half a mile an hour.

### How Electrical Timing Works.

There is no doubt, however, that our timekeepers are extraordinarily accurate and wonderfully reliable, but however skilful they may have become through long practice, it is impossible to get over the difficulty of the watches to which we have referred. There seems to be little doubt whatever that records in the future will be electrically timed only. There is in existence at Brooklands at the present time a wonderful electrical timing apparatus which was designed by General Sir Capel Holden and Sir Reginald Elphinstone.

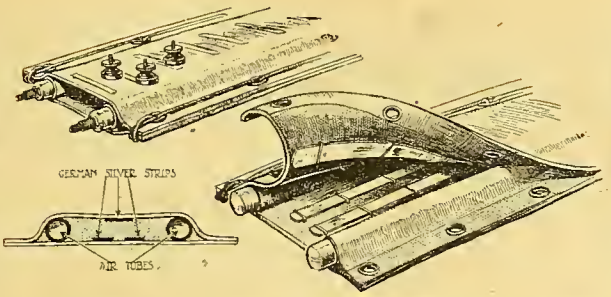
Many years ago we published a description of the instrument, through which passes a paper strip moved by a very delicately governed piece of clockwork mechanism at a uniform speed. Three fine pens mark three parallel ink lines on the paper; of these, the two outer pens are actuated by electro-magnets and contacts connected to wires leading to two timing strips on the track. The centre pen is controlled by electro-magnets and contacts working in connection with a pendulum situated in the lower storey of the timekeeper's hut.



Detailed sketch of the electrical timer. The paper strip passes under the recording pens at a predetermined rate of speed controlled by accurate clock mechanism.

When the motor cyclist passes over the first timing strip on the track the magnets cause the right-hand pen to make an indentation on the line, and when he passes the finishing strip the left-hand pen makes a similar mark on its own particular line. As regards the centre line the pen which draws this makes an indentation at

**Timing High Speed Records.**—intervals of every two seconds. The centre line, therefore, registers time, the top line the starting, and the bottom line the finishing moment. The distance, therefore, between the starting indentation and the following two-second mark added the distance between the finishing mark, and the preceding two-second indentation gives an accurate measure of time, which, added to the total number of complete two-second intervals between the two, gives the time for the whole distance. The measurements are made in a special instrument by means of a magnifier and a vernier scale.



Lightly inflated air tubes separate the metal contact strips which are placed across the track at Brooklands in the path of the record-breaking motor cycle.

### Track Contact Strips.

Now as regards the strips on the track. These are German silver contacts separated by air tubes in which there is a very light pressure of air. In the case of a motor cycle it has been found that such a light vehicle is apt to jump clear of the strip owing to the unevenness of the track, and may miss it altogether. Also, if there is a very slight miscalculation in the adjustment of the strip—that is to say, if too much air is inserted in the tubes—the machine is too light to record its passing. We are, however, assured by Colonel Lloyd that if the necessary precaution is taken of delicately adjusting the strips and the instruments themselves it is quite possible to take motor cycle records with certainty.

There is, however, an alternative, and that is to do away with the tapes and to employ timekeepers to tap an electrical contact the moment the machine crosses the line. At first thought the reader may be inclined to imagine that it might be just as well to employ hand-timing as to follow this method, but this is really not the case. Even though the human element is employed in deciding the moment the vehicle passes the mark, the timing must be superior to hand-timing because owing to the system employed fractions recorded may be in hundredths of a second. In Colonel Lloyd's own words, "Given accurate machinery, hand-timing is exact enough, the only objection to the usual practice being the impossibility of using watches reading to a smaller fraction than one-fifth second."

# THE NATURALIST ON A MOTOR CYCLE.

## Showing that Keen Observation adds immensely to the Interest of a Run in the Country.

A GENTLE wind blows from the south to-day, and there is something in the air that savours of a better season at hand. Light feathery wisps of cloud are wafted across the clear blue of the sky, and the cawing of rooks is borne across the meadows from the distant elms.

The little twin-cylinder pulls evenly, and its exhaust is a joy to hear. The engine is throttled down so that the country may be observed and a quick stop made if there is anything of special interest to be seen. Here the way dips down and passes through a wood where the air feels chill and damp, then up the hill and on to the cross-roads where a black and white signpost stands up gauntly by the pool. On the post is a yellowhammer, for curiously enough they appear to love this vantage point, and on a hot summer's day their monotonous chant "a little bit of bread and no cheese" sounds very sweet to the passer-by.

The chaffinches are about in great numbers to-day, and they fly off the hedgetop at one's approach, their many-coloured coats showing up brilliantly in the bright sunshine. Down by the marshy lands that border the river it is a pleasure to leave the motor cycle and wander along one of the many dykes. Here the lapwings manœuvre around with their weird cries of alarm. Later on, however, they will become even more excited at the approach of the wayfarer, and at times appear as though they contemplate a massed attack.

Along the little river there is also great activity, and it is no surprise to see some sandpipers evidently prospecting for suitable nesting sites. The small bushes on the bank harbour many linnets, and their combined notes sound quite cheery after the silence of the dark season.

Late afternoon brings rain clouds over the horizon, and towards dusk the countryside takes on a dreary aspect. It is wise now to hasten homewards, and the little "bus" responds well to the opened throttle. Soon the rising wind drives the first drops of rain into the face, and, speeding down the slope into the village, it is comforting to see the glow from the window telling that fireside comforts await within. T. L. W.

---

AN inter-club trial is to be organised by the Motor Union of Liège, which will be called the Defence of Liège. Clubs competing will be those sent by France and Holland, as well as those of Belgium, and valuable cups have been offered to the winning Belgian club by various journals. Considerable interest is being taken in the event by the Belgian army staff and by the Minister of National Defence. The trial consists of an attack on Liège, which is to be defended by the town clubs against the country clubs, and will take place on June 4th, between the hours of 11 and 1. On the Monday there will be a meeting of motor cyclists in the University, while motor cyclists will also be invited to visit one of the famous forts of Liège.

# SIX DAYS in SCOTLAND

R. Lewis (555 c.c. P. and M. sidecar) starting the climb of Abriachan. The lower road skirts the banks of Loch Ness.

## Views on the Scottish Six Days' Trials from three different Aspects: An Onlooker's, a Competitor's, and an Engineer's.

### IMPRESSIONS OF A PRESSMAN.

I ALWAYS go up to the Scottish Six Days in the mood with which a very young rabbit crosses the Portsmouth Road for the first time. I always return feeling like the parrot which got out of its cage and devoured the whole of the tipsy cake, so blithe am I that the annual ordeal is over. This is a disgusting confession to make now that the audacious Mrs. Knowles has lifted a solo gold, whilst Mrs. Jansen was only prevented from finishing by the hardest of hard luck. So let me hastily explain my cowardice.

In the first place, I am next door to a grandfather. In the second, I live on tarred roads, and hardly ever see a "sticky bit" by this date in the season. In the third place, some fools say—and actually believe it—that the Scot has no sense of humour. He has as keen a sense of humour as anybody on earth. It may be a perverted humour, but it is there. He catches us when we come off the night mail, all bleary and dazed with a long railway journey; and he proceeds to exert the full force of that massive intellect with which all Scots are notoriously blest, to put the "breeze up" us. I always fall an easy victim.

Usually he effects his nefarious purpose by lurid accounts of the new hills. By 1922 this wheeze had got rather stale; besides, we were getting to know his hills. So this winter the Edinburgh Committee met in secret conclave, and decided to date the trial for May—and May in Scotland is to an English May as having your dud tooth frozen by the dentist is to eating a pound of marzipan.

We stepped off the train at Waverley Station, and all the familiar faces were there to greet us. Our Northern friends stepped forward and wrung us by the hand with the air of the lawyer at the funeral, who knows officially that your favourite aunt has left her millions to a home for lost cats. We wondered at the reverent reserve of this welcome. The Scots began rather mysteriously to curse the A.C.U. for dating the T.T. so awkwardly; to curse the R.S.A.C. for holding light car trials; to curse the Scottish hotel proprietors; to lament the record tardiness of the Highland spring.

As I said before, we have just completed an all-night journey in a stuffy train, and such courage as we possessed was of the 2 a.m. variety. Our faces grew more and more anxious. Our eyes began to bulge. And the hateful Scots grew more and more sympathetic. Floods had washed the bridges away—

**ix-Days in Scotland.—**

ut no matter, they would bank-upt the club in purchasing lanks rather than that we hould wet the soles of our feet. ll the sheep north of Perth were ying cold and stiff under 20ft. of now. The Edinburgh Club was obly chartering tractors and snow loughs—under *no* circumstances ere we to get anxious. But, of ourse, we did; and not until the eek was well advanced did we ealise that the entire atmosphere as one gigantic leg-pull. Yet nethinks that when the club reasurer comes to settle the bill for he 75 gold medals, the boot may airly be deemed to adorn *our* leg. )ne thing I know—the 1923 Scot-ish will obviously be some trial; hey won't hand round 75 golds gain without a struggle. When ts date is announced, I shall get married, or kill ff my umpteenth grandmother, or figure as "reason-bly absent," as they say at Sunday schools, on some ground or other.

E. W. Choldcroft (349 c.c. A.J.S.) and Mrs. Knowles riding a similar machine on Tynron Hill.

And so to our muttons. None of the new hills were vorth yellow ochre except Blackford. Doric cruelty gain. Fancy keeping back the worst new hill to the enultimate mile of the trial. But even Blackford only topped the dud engines and the unfortunates. Before hill can defeat the modern rider on a modern engine hree factors must be present, and all three must be aised to the *n*th power; they are:

1. Surface. 2. Gradient. 3. Corners.

Note once more the wiliness of the Scot. Whatever e may say about Glendoe, he knows that Amulree is is worst hill. So he sends you up it on the first day, efore you have graduated as a chamois trying to nibble edelweiss whilst fleeing from the hunter up a glacier. From both sides. And even then he only trips up the beginners. Inverfarigaig? Any ordinarily good rider can climb it "feet on," provided (*a*) he has been up it once before, and (*b*) no medal hinges on a clean climb, but it is a snorter when you meet it for the first time, and a gold is attached to your behaviour. Also the second corner on Amulree is never a cast-iron certainty for anybody except perhaps George Dance and Bert Kershaw.

However, the weather was kind to the Edinburgh treasurer at one spot. I have not infrequently "blinded" over the section between Grantown and Bridge of Avon both ways. This year there was a great plucking out of grey hairs over the shaving-glasses next morning. The ride into Grantown on the Tuesday had the Bodmin Moor stretch in the Land's End knocked out in the first round; the weather was the same in both cases, but the Scottish bit undulated like a lariat when a cowboy is sending half-hitches down it, the road varied from glue to vaseline in consistency, and resembled in surface a shellhole after two siege guns have been extricated.

Tynron Hill proved an easy task. W. Woodcock (Ariel sidecar) between the two more difficult portions.

On the return journey next day things were better, until we reached the normally easy bit at the top of Brig o' Brown. Here there was a hundred yards of stuff resembling deliquescent concrete, some 9in. deep. It pulled up cars as if their gear boxes had jammed. As to the two-wheelers, my friends all said at lunch, "Did you see me go up Brig o' Brown?" "No?" "I never took my feet off." But I didn't believe them. I never put my feet on.

To give readers an idea of the hills, the writer's o.h.v. Triumph has a bottom gear of 11.08 to 1.

**Six Days in Scotland.—**

On this she ticked easily up the test hills with the spark fully retarded and the throttle in slow running position. As some solo machines had emergency gears of 20 to 1, and even less, steering was obviously the chief obsession for solo men, just as wheel slip most bothered the sidecarists.

If the need for skid-cornering were eliminated, the percentage of sidecars to finish would instantly become higher than the percentage of motor bicycles, because a number of the two-wheelers are outed as the result of falls on grease and on colonial sections, a trouble from which sidecars are immune.

There was a fair amount of really bad riding—I say "riding" because men ride with their heads as well as with their hands. Taking hills too fast. Taking awkward hills close behind another competitor. Wasting time, and then blinding to make it up. Blinding without any excuse whatsoever. Missing the way through sheer carelessness. It would be a sound education for any trials novice to ride a few miles behind such an expert as Bert Kershaw. His entire attention is concentrated on the job in hand. He never goes one mile an hour faster than is necessary.

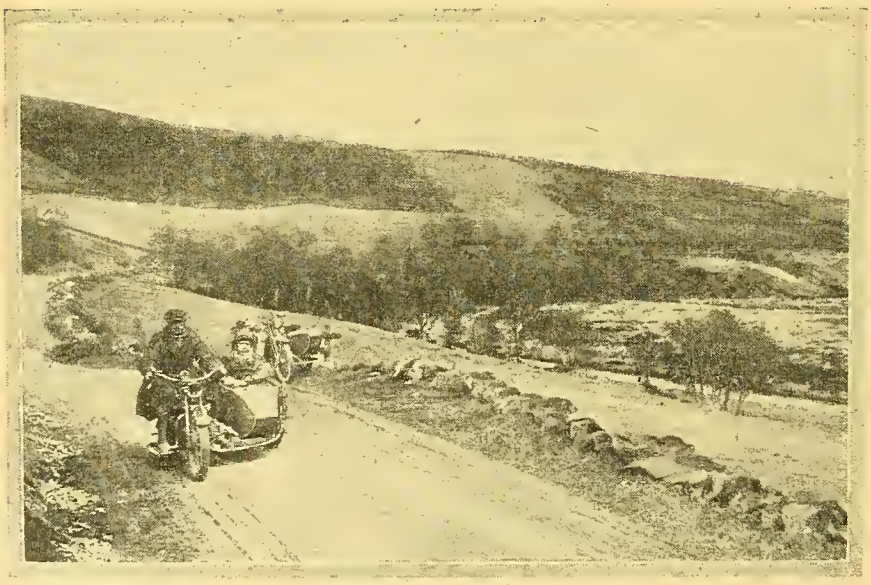
Enormous crowds of interested spectators watching A. A. F. Symes (678 c.c. Martinsyde sidecar) climbing Blackford Hill.

### Contrasted with 1921.

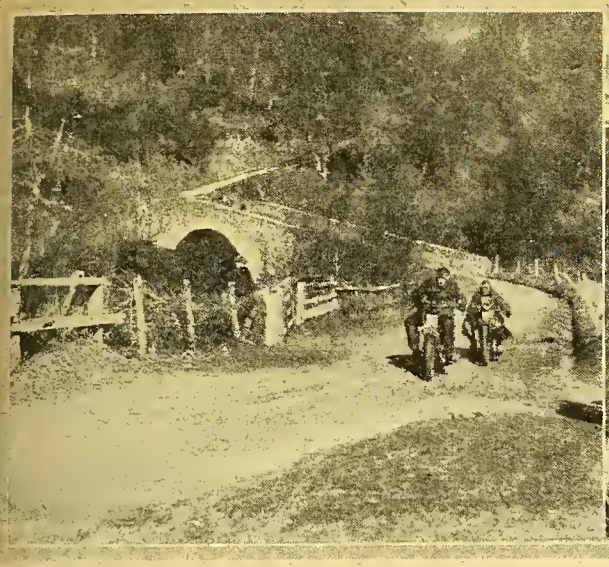
There were two marked contrasts with 1921. There were hardly any protests—the rules had been framed very clearly. There were far fewer jokes. At most official stops in a Scottish the air is a-buzz with really comic incidents. Perhaps the cold and the hail and the rain dried up our spirits, but anyhow we didn't laugh half as much as usual.

Turning to more personal matters, I jogged round on one of the first o.h.v. Triumphs, and had the most comfortable ride of my experience. Never before have I returned to Edinburgh without a few aches and pains somewhere; but a good riding position, 3in. Dunlops, and a Druid fork have changed all that. The clearance of this machine is a little low for rough riding—the footrests got cock-eyed in a rut before ever she went North, and ere long the exhaust pipes fouled a rock reef, and had to have a giant poker hammered down them one night.

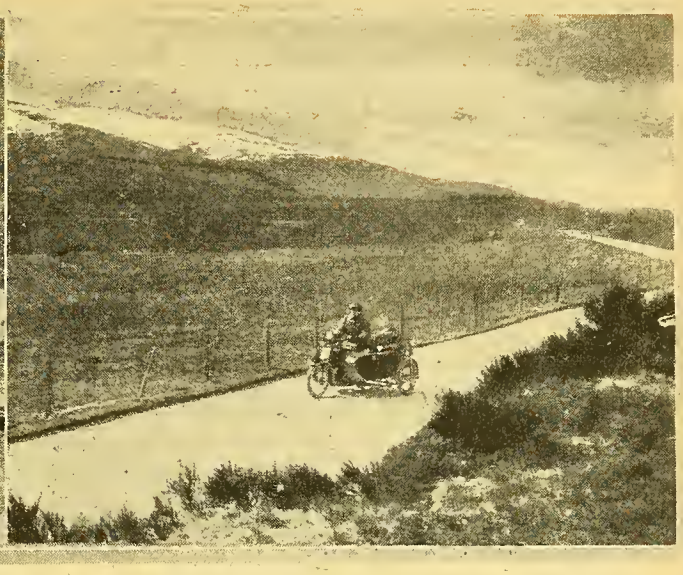
The top gear was too high for fancy roads, and I shall fit a smaller sprocket on the next jaunt of the kind. But even on the highest set of gears fitted to this model there was never the least anxiety about hill-climbing, and the only drawback was that a lot of second gear was required. The Triumph rear brake is so firm and trusty that the front one need not have been there. The fuel consumption varied between 100 m.p.g. and 60 m.p.g. according to wind, speed, and road; just over one quart of Speedwell "White Ideal" was used. The engine certainly needed decoking at the end of the trial, but had been by no means clean at the start. The only spare part which I carried was a K.L.G., and its sister in the fastness amidst the four valves was so insulted at the precaution that she never sooted up or misfired.



Campbell McGregor, the energetic secretary of the Edinburgh club, used quite a number of vehicles in his efforts to get round the trials. He is shown in a Douglas sidecar which served him for a time.



On the lower, steeper, but actually easier section of Brig o' Brown: W. E. McKechnie (688 c.c. McKechnie) and J. Boyd (550 c.c. Coulson) climbing well.



Returning on the fourth day by a circuitous route to avoid the snow-blocked Cabrach: D. S. Ball (800 c.c. A.J.S. sidecar).

Engine starting is a first time job after the heaviest day. Tappets were adjusted once, chain once. The small bolt securing the front mudguard to the fork sheared and was replaced. I can heartily recommend this machine for docile riding as well as for speed work, merely specifying that a small sprocket is desirable for ordinary touring unless ample use is to be made of the gear lever.

As the weather was bad, some details about clothing, etc., may be of interest. An Aquamac coat kept me bone-dry all the week as to my upper, topped by one of the cheap Ledux helmets, made out of proofed hood fabric. For legwear I tried the Trewso with spring steel side fastenings. These were equally waterproof, but one of the springs occasionally jumped out of its socket, careful fitting being necessary with this design; two inches of a seam also came unstuck, and one of the instep straps went "west." Rubber goloshes over ordinary boots. A pair of 2s. 6d. hedger's gloves—so cheap that you don't mind losing them, so obviously worthless that nobody steals them, quite warm, and tolerably waterproof.

ROAD RIDER.

## AS A COMPETITOR SAW THE TRIAL.

FEW, if any, trials have occurred in which the public might so safely pin their faith as a genuine test of machines as the recent Scottish "Six Days." While run on the simplest lines, it has, nevertheless, been a most searching trial of road-worthiness. Usually there is a chance for the crack rider on an indifferent machine, but in this case there was none. A machine requiring constant attention was bound to go to the wall.

The immense distances covered, the nature of the country traversed, the shortness of the checks, and a hundred other elements entered into the remorseless process of weeding out the unfit.

It has been said that premier awards were too numerous. This is not so. Only those who took part in the trial or who followed it can realise the terrific gruelling that machines and riders underwent. That there should be so high a percentage of premier awards is perhaps the most astounding proof we have had of the efficiency of present-day machines.

### Impressions of the Highlands.

Looking back on the trial, now that it belongs to one's impressions of the past, one finds the mind a chaos of disordered impressions—miles and miles of moorland road, with range after range of rugged indigo beyond, dazzling panoramas of widespread lochs, with the storm-swept hills on every side. At times we could see the storms sweeping the heights all round us, but for the most part they were kindly and left us alone. One sees again the rocky, pine-capped outcrops which make the Highlands so beautiful, and here and there we skirted for miles some majestic mountain torrent, the beauties of which were almost depressing in their grandeur. We saw so much each day that there lives, as I say, merely a disordered chaos, fleeting impressions, one quickly succeeding another, but making the aggregate something very much worth remembering.

### A Comparison.

I have said that the trial was a simple one—a simplicity rendered possible by the fact that a Highland trial needs no frills to weed out the unfit. The distance and the nature of the country do it, and I suppose this is the longest Scottish "Six Days" ever held. The revision of the route, owing to the snow on the heights, did not improve matters for the competitors. The distances covered in the Scottish are always much greater than those covered in the English

trials. I consider it a far more exhausting trial, and I think this last Scottish was certainly more trying than the English of two years ago. In that trial I won a gold; had my luck been as bad last week I might have won a silver, but more probably a bronze. Indeed, I am doubtful whether I should have finished the trial at all.

### Stiffening up the Rules.

The Scottish officials have always been famed for their fairness and their friendly disposition towards the riders. They set a stiff course, but having done that they seem to want as many as possible to survive it safely. This year the same genial spirit prevailed. The officials were our friends.

The rules, however, had been considerably stiffened up. We were allowed five minutes each way instead of three; we were allowed to fail on one hill. Having made these generous amendments, we were given quite clearly to understand that we had received just about all that we were going to get.

Last year the competitors formed the habit of protesting on any grounds whatever. Anyone who failed protested as a matter of course. Some were heard, and no reasonable protest was turned down. This year any rider who handed in a protest which was considered frivolous was most unpopular. The entry was so big, trade riders so numerous, each, naturally, eager to do the best for his employer, that weakness of any kind would have been the utmost folly. And no weakness was shown.

### Wonderful Organisation.

After any big trial it is usually easy to place a critical finger on some weak spot in the organisation—possibly an official lack of confidence in its own route selection, a sad error in judgment, an unfairness in some experimental method of marking. Invariably there is a chance for the expert grumbler to spread himself.

Looking back on this trial, however, I fail to see a single hitch in the working. One did not hear any criticism. Campbell McGregor, who has organised every "Six Days" but one, is certainly a wonderful man at the job, and his many assistants are keen and efficient as himself. This year, however, the smooth working of the trial calls for special praise, since everything had to be altered at the eleventh hour owing to the snow. Yet there was no hitch. We received our route cards with printed slips gummed over the altered sections. The colour car with its gigantic coffee grinder went ahead, always an hour or so in front of the first competitor. It marked the route faultlessly—no one was lost—and at night we saw our names on the garage wall, indicating the hotel to which we were to go. The baggage car had already arrived, and away we went without doubt or question to our allotted resting places, which generally more than fulfilled our requirements. Strenuous though the trial was, the riders were given every available comfort and relieved of all outside anxiety, and there was never the least hustle with regard to obtaining petrol and oil.

### Examination of Spares.

The preliminary examination of spares was much more rigidly carried out this season than ever previously. Only such replacements as sheer bad luck or legitimate mishap might demand were allowed. Nevertheless, this proceeding was not without its touches of humour. I saw an official snatch a piston and connecting rod complete from a competitor's kit and threaten to brain him with it.

When it came to my turn I told the burly official what I had—a few chain links, two spare plugs, a spare tube, etc.

"Open that bag," he ordered.

I did so. His face fell. "Och!" he exclaimed, "this man's too cunning. Come on, Ronald."

"Then," I added, "I've got in my pocket a ——"

"Hold your tongue, man," ordered the spare parts examiner genially. "We're no' going to feel in your pockets."

And they were gone.

On another occasion I blinded through a check, thinking I was late. An excited official ran out, waving something which looked like an Indian club, save that it was black and might indeed have been something quite different.

"Go back, man, go back!" he shouted.

Tam-o-Shanters were very popular, many of the competitors preferring them to more orthodox headgear. C. Guthrie (348 c.c. Raleigh), D. S. Ball (800 c.c. A.J.S. sidecar), and R. Evans (348 c.c. Raleigh) at the lunch stop in Perth.

**Six Days in Scotland.—**

"D'you ken you're nearly five minutes ear-r-rly?" I went back, and I am glad I did not miss that check. It was a cold day up there on the roof of the world, and there is nothing like a swing (I almost said swig) of the Highland club to warm one.

### Heroines of the Trial.

Many times during the trial, especially during the rocky and interminable descents at the end of a long day, when for miles one's weight was thrown on one's wrists over difficult going, I thought to myself that if any lady competitor survived she deserved a special award. Among the lady soloists only Mrs. Knowles completed the course, and everyone congratulated her, for she has tried hard in previous trials, generally suffering the most aggravating bad luck. She has shown what her sex can do in yet another walk of life, and she is the first lady to gain a solo gold in the Scottish. Mrs. Jansen was no less of a heroine.

Finally, I feel that a word is due regarding the Barr and Stroud Precision which I rode for the makers, though having no interest in this concern. The new sleeve-valve engine certainly fulfils expectations. Its wonderfully silent tick-over was widely commented upon, and at the checks, where other riders were waiting, I could not tell whether or not the engine was going except by looking down at the fly-wheel. It is a very sturdy puller. On the third day I broke my magneto Bowden, but did not trouble about repairing it, as the engine cannot be made to pink, and pulls to its last gasp whether at full advance or full retard. Unquestionably, a great future for this engine. It cannot be made to overheat, and, so far as I can judge, it is as good as the poppet valve in every respect, and a great deal better in many ways. Both Greaves and myself did 70 miles to the half gallon over one of the most difficult sections of the route, and oil consumption was negligible. On the whole, the handy little Beardmore-Precision proved an ideal machine for the job. It is sturdy, light, and comfortable, and my only grumble was that the steering required a little getting used to. By the end of the second day I had ceased to notice this peculiarity.

So the most important and probably the most strenuous trial ever held in Scotland has come to an end, and though the good old hardy annual of "never again" was on everybody's lips when we checked in at Blackford, drenched to the skin in spite of trench coats and tarpaulins, we already find ourselves wondering what next year will hold.

H. MORTIMER BATTEN.

## "EXPERIENTIA DOCET"—THE TECHNICAL LESSON.

THERE has never been held a fairer test for the motor cycle than this year's Scottish Six Days' Trials. Neither freakish nor too easy, they were just sufficiently severe to uncloak weaknesses in any detail, while almost completely eliminating the too often deceptive "luck" element.

All the hills were such as the average private owner might meet in his holiday tour; all the roads were such as motors must frequently traverse; and the weather, too, was not out of the ordinary, although happily well varied. Why, then, the reader asks, did 43 motor bicycles and sidecar outfits retire, and of the remainder of 121 starters only 59 gain gold medals? The real reason embodies several factors, and, paradoxical as it may seem, the least of these is the unreliability of the defaulting 43 and only slightly less guilty 18 which received the lesser awards under severe but, nevertheless, possible touring conditions.

### Six Days of Grinding Tests.

The Scots have a proverb that "Mony a mickle mak's a muckle," which translated implies much the same thing as the better-known saying regarding the cumulative effect of little drops of water on a stone. This is what happened in the Trials.

Six successive days of grinding, but by no means insurmountable, tests, of hard riding (for the 20 m.p.h. schedule left no margins whatsoever, and tyre trouble had to be guarded against), of mixed roads and often adverse weather conditions, had a greater mass effect than three "super-freak" English one-day trials in succession, *or 6,000 miles of holiday touring.* It is perhaps only possible to realise this fully after "following" the Trials by motor cycle—and there were three representatives from *The Motor Cycle* office who did this during the week—but the fame of some of the names, men and machines, which rank in the list of retired, must also bring it home to those who follow competition matters with any regularity.

### Unnecessary Speeding.

In the second place, there was not a little very amateurish and some thoroughly bad driving. There was also much "blinding." It was not necessary to arrive at a short distance check more than half an hour ahead of time to be prepared for any eventuality that was not a serious mechanical breakdown. Fewer "broken frames," "broken chain stays," and "broken sidecar spindles" would have adorned the results sheet if this rule had been recognised and acted upon.

Fourthly (or thirdly, if unnecessary speeding be classified as bad driving), many of the starters did not realise the nature of the event they had entered for, and came North without making any special preparations whatsoever. With a first-class machine, of course, this should not have made much difference. For example, the writer a few hours before leaving town for the Trials was forced to make a change of mount; and; purchasing only a spare inner tube, he filled up an entirely strange Sports Sunbeam with fuel, rode it to Edinburgh, and then right round the Trials at nearer 30 m.p.h. than 20 with no more trouble than three punctures, a broken exhaust pipe (in a deep water-splash), and the necessity to adjust the rear brake twice. This incidentally serves to emphasise the excellence of the 100 per cent. special gold medal Sunbeam success in the competition proper.

But amongst the lightweights, the low capacity sidecar outfits, or those machines with the magneto in a very exposed position, a little attention to weather-proofing and to tyres might have improved the percentage of gold medal winners to starters.

**Six Days in Scotland.—**

Getting down to statistics we are able to extract from the detailed results the following interesting figures:

COMPARATIVE PERCENTAGES.

| | Started. | Finished. | Percentage. |
|---|---|---|---|
| Motor bicycles ... ... | 79 | 52 | 65% |
| Sidecars ... ... | 40 | 22 | 55% |
| Three-wheelers ... | 4 | 3 | 75% |
| Cars ... ... ... | 25 | 23 | 92% |

CAUSES OF RETIREMENTS.

(*Motor bicycles, sidecars, and three-wheelers only.*)

| | |
|---|---|
| Broken frames or chain stays ... ... ... | 10 |
| Engine failures or breakages ... ... ... | 10 |
| Magneto failures ... ... ... ... | 5 |
| Gear box or transmission ... ... ... ... | 7 |
| Sidecar wheels or spindles... ... ... ... | 3 |
| Collisions or fails ... ... ... ... ... | 4 |
| Cause unknown ... ... ... ... ... | 4 |
| | 43 |

Considered together these tables make curious reading, and, at a glance, rather unpleasant reading for the sidecar enthusiast. But things are not really as bad as they seem. The chief reasons for the sidecar retirements were fractured frames, chain stays or sidecar spindles, and these were almost all caused or aggravated by skid-cornering at speed which no private owner on tour over the same ground would think of indulging in; although the latter would very likely climb the same hills on the same machines as the competitors used—excepting, perhaps, Inverfarigaig, which would be, what many called it, "Infra-dig." At the same time there is no disguising the fact that the task was just beyond the capabilities of some of the sidecar people, who probably acted unwisely in entering, and thereby discrediting, machines which give every satisfaction under more ordinary conditions. This is borne out when it is remembered that the solo riders had to contend with the further difficulty of avoiding spills on surfaces of the consistency and instability of the Brig-o'-Brown slough of despond.

Engine failures were common to all types of vehicle, and were of several different varieties. Among so many starters the number eliminated for this reason only serves to emphasise the reliability of the rest.

Retirements owing to magneto trouble, however, call for an enquiry, for we have long been taught to regard this instrument as the acme of reliability. In most cases the root cause was lack of weatherproofing; the remedy is obvious.

Transmission breakdowns ranged from broken gear quadrants, *via* seized layshafts, and stripped low gear pinions to stretched and weak rear chains and defective cush hubs. When these are split into their individual causes the unreliability factor becomes almost negligible.

Sidecar wheels and spindles may have given way through faulty design, workmanship, or material, but skid-cornering again is the more likely cause.

### Amazed Everybody.

One or two remarks on actual happenings may not be out of place. There was more than one case of distinct hard lines, where really meritorious performances were camouflaged by sheer bad luck. The Harper runabouts, for example, amazed everybody on the first two days; one was put out of the running on Tuesday with mechanical trouble, easily rectified, maybe, but nevertheless a fair knock-out blow; the other was the unoffending party to a collision; both completed the course with flying colours, unofficially. Watson-Bourne had retained a clean sheet until Saturday afternoon, his Brough Superior showing up particularly well on the hills; then he shorted a plug on Tynron because—a lesson to be learnt here—of water collecting under his tank and draining down the h.t. wire; then he fell off on Blackford owing to a slip with a wet gloved hand.

Mrs. Jansen's mount was unsuited to its task in several ways, and although Mrs. Jansen herself earned real fame for her dogged pluck, the Ner-a-car proved too long in wheelbase, and, in this particular case, under-geared.

Considering that it was his first trial and that he was by far the oldest competitor, Col. McKechnie has every reason to feel proud of his demonstration of the suspension of the big solo mount bearing his name.

Regarding the medallists little need be said; the award list (published last week) speaks for itself. Special attention, however, may excusably be directed to Sibley's small capacity Rudge outfit and Hubbard's only slightly larger Rex-Acme; both retained absolutely clean sheets. Dickson's gold on a Brough Superior with a $7\frac{1}{2}$ to 1 bottom gear also deserves praise. For the rest, as we have said, the results need no amplification.

### When and Why They Retired.

**Monday.**

H. Goring (292 Hawker), collision, etc.
C. N. Falconbridge (998 Rudge sc.), gear box.
A. Pearson (532 Scott), fall.
E. R. C. Scholefield (1,100 New Hudson), accident.
D. Scott (292 Excelsior), cause unknown.
J. M. Watson (584 Harley-D.), cause unknown.

**Tuesday.**

W. L. Danskin (998 Rudge sc.), sidecar spindle.
D. A. Atkin (346 Francis-Barnett), cush hub.
A. Brown (992 Ariel sc.), sidecar spindle.
A. Graham (269 Harper Runabout), engine.
J. A. Porter (482 New Gerrard), valve rocker.
W. Wilkie (1,300 American X sc.), overgeared, etc.
W. S. C. Walker (736 Douglas sc.), chain.
J. Donaldson (420 Royal Scot), frame.

**Wednesday.**

A. F. Downie (800 A.J.S. sc.), magneto.
R. S. Macrae (988 Harley-D. sc.), frame.
G. Grinton (988 Harley-D. sc.), frame.
J. A. Newman (496 Douglas), timing gear.
F. J. Watson (992 Ariel), gear box.
P. H. Johnson (499 Rudge), chain stay.
R. R. Grindlay (499 Rudge), chain stay.
R. O. Harper (269 Harper Runabout), collision.
J. B. Sanderson (292 Hawker), lubrication.
F. W. Becker (688 McKechnie sc.), sidecar wheel.

**Thursday.**

B. L. Bird (770 B.S.A. sc.), frame.
C. W. Vallings (499 Dunelt sc.), frame.
John Shepherd (976 Chater-Lea sc.), gear quadrant.
B. Kershaw (248 New Imperial), magneto.
J. G. Porter (269 New Gerrard), frame.
R. M. Wishart (482 New Gerrard), cause unknown.
J. Boyd (499 Coulson), valve cap blew out.
J. Wallis (688 Coventry Victor), connecting rod.

**Friday.**

A. G. Cocks (598 Beardmore-Precision sc.), chain stay.
E. Foster (698 Raleigh sc.), frame.
R. M. Knowles (490 Norton), piston.
W. Chate (499 Dunelt sc.), magneto.

**Saturday.**

W. G. Donaldson (654 Rover sc.), cause unknown.
W. A. Hadfield (348 Raleigh), magneto.
H. Collins (490 Norton), magneto.
R. Humphries (249 Velocette), connecting rod.
W. E. McKechnie (688 McKechnie), engine.
Mrs. Janson (211 Ner-a-Car), magneto.
T. F. Sleven (249 Velocette), engine.

A. McL.

# NEW O.H.V. TWIN ENGINES.

## Two New Medium-size Blackburne Twins with Overhead Valves.

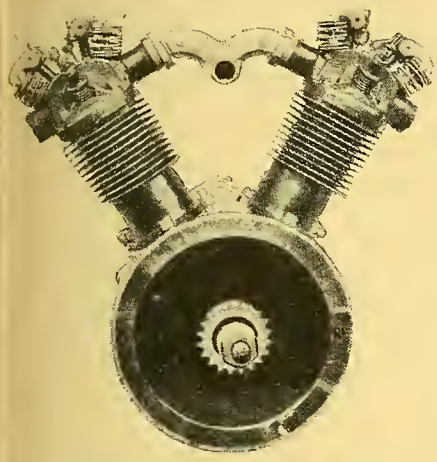
THERE is no doubt that it is a modern tendency to favour the small high-efficiency type of engine. It is generally speaking more easy to get the utmost efficiency out of a small engine than out of one of larger capacity. The small engine, moreover, is necessarily lighter, more economical and, if properly designed, can be induced to give practically the same results as one of larger size.

Messrs. Burney & Blackburne have certainly done wisely in introducing a new 5-6 h.p. overhead valve engine suitable for sports models and fast sidecar outfits. The engine is composed of two 350 c.c. cylinders, and may be had in two patterns: short stroke, 71×88 mm., 696 c.c., or long stroke, 71×97 mm., 768 c.c.

In general appearance it is decidedly attractive. The cylinders are set at 60°, and the arrangement of the valve gear is almost identical with that of the well-known 350 c.c. T.T. engine. The model under consideration can be supplied either with cast iron or aluminium pistons and with ordinary or special cams, with which, its manufacturers claim, it is possible to attain over 80 m.p.h. The flywheel is light and very close to the crankcase, the chain sprocket being carried on the outside. Notwithstanding, the main bearing dimensions, $2\frac{15}{16}$ in., have not been interfered with.

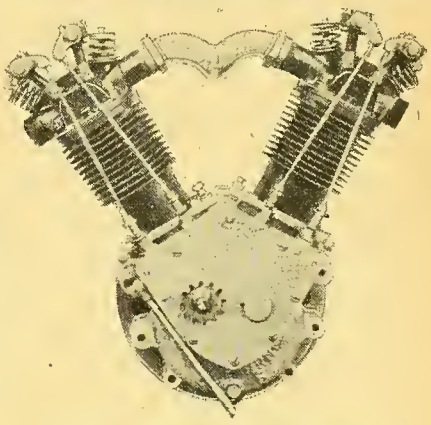
The timing gear is of simple design, there being one cam wheel for each cylinder and a single cam for each inlet and exhaust.

On the cylinder head the fins are deep and numerous, while the exhaust ports are of ample dimensions.



A new long stroke Blackburne twin with overhead valves, with a bore and stroke of 71 × 97 mm. = 768 c.c.

An engine which has not been previously dealt with is the new 8 h.p., which since reference was last made to it in these pages has undergone one or two alterations. Chief among these is the fitting of an entirely new cylinder head with greatly increased radiating surface, deeper fins being fitted, while the design of the ports has been considerably improved.



The cylinder heads have been entirely redesigned and the makers claim 80 m.p.h. has been attained by this model.

# 70 M.P.H. ON 1 IN 12.

## Fast times at the East Midland Centre Hill Climb.

A fine day, good organisation, a suitable hill, and good riding combined to provide a crowd of some two thousand spectators with an interesting afternoon on the 6th inst., when the Loughborough and District M.C.C. held a hill climb open to East Midland Centre A.C.U. Clubs.

Since the upper part of the hill, which has a gradient of about 1 in 12 (without corners) was somewhat "rutty," a section of one half-mile of excellent surface was chosen on the lower slopes. Solo machines were allowed about 75 yards to "get going," and passenger machines had a flying start of approximately one furlong. Some fine riding was witnessed, but the struggle for fastest time of the day soon became a battle between a few first-class men and machines. As each rider ascended the hill in every class for which he was entered there were plenty of opportunities for getting to know the road, but considering the fact that a fast wind was blowing down the hill the times were wonderfully consistent. Outstanding performances were made by F. Sisson (3½ Norton), H. M. Barron (3½ Norton), K. S. Topping (3½ Norton), H. Petty (3½ Norton), G. le Champion (3½ Sunbeam), J. R. Sylvester (2¼ Velocette), T. E. Norris (2¾ Sheffield Henderson), P. Turnhill (3½ Norton), and N. A. Wheeler (2¾ Massey Arran).

### RESULTS.

**Not exceeding 550 c.c. Sidecars (on time).**

*Section A* :—
H. M. Barron (3½ Norton sc.) } 31⅗ sec.
K. S. Topping (3½ Norton sc.) } (tied).

*Section B* :—
F. Sisson (3½ Norton sc.), 27⅕ sec. (walk over).

**Class 2.—Not exceeding 550 c.c. Sidecars (on formula).**

*Section A* :—
K. S. Topping (3½ Norton sc.).
H. S. Harvey (3½ Norton sc.).

*Section B* :—
T. E. Sibson (4 Dunelt sc.) (walk over).

**Class 3.—Passenger machines unlimited (on time).**

*Section A* :—
H. Harvey (3½ Norton sc.), 31⅘ sec.
K. S. Topping (3½ Norton sc.), 33⅗ sec.

*Section B* :—
F. Sisson (3½ Norton sc.), 27⅖ sec.
F. T. Hatton (6 Douglas sc.), 33⅕ sec.

**Class 4.—Passenger machines unlimited (on formula).**

*Section A* :—
K. S. Topping (3½ Norton sc.).
H. M. Barron (3½ Norton sc.).

*Section B* :—
F. T. Hatton (6 Douglas sc.).
H. J. Woodgate (10 Morgan).

**Class 5.—Solo two-strokes up to 350 c.c. (on time).**

*Section A* :—
A. Bowerman (2¼ Velocette) } 41⅗ sec. (tied).
J. Savory (3 Ivy) }

*Section B* :—
J. R. Sylvester (2¼ Velocette), 38⅕ sec. (walk over).

**Class 6.—Solo machines up to 350 c.c. (on time).**

*Section A* :—
T. E. Norris (2¾ Sheffield Henderson), 28⅕ sec.
N. A. Wheeler (2¾ Massey Arran), 33 sec.

*Section B* :—
H. Bemister (2¾ Coulson), 31⅖ sec.

**Class 7.—Solo machines up to 550 c.c. (on time).**

*Section A* :—
T. E. Norris (2¾ Sheffield Henderson), 27 sec.
H. M. Barron (3½ Norton), 27⅕ sec.

*Section B* :—
F. Sisson (3½ Norton), 24⅘ sec. (fastest time of day).
N. Black (3½ Norton), 27⅕ sec.

**Class 8.—Solo machines up to 750 c.c. (on time).**

*Section A* :—
H. M. Barron (3½ Norton), 26 sec.
G. le Champion (3½ Sunbeam), 27⅕ sec.

*Section B* :—
F. Sisson (3½ Norton), 25⅘ sec.
H. Petty (3½ Norton), 26⅕ sec.

**Class 9.—Solo machines unlimited (on time).**

*Section A* :—
H. M. Barron (3½ Norton), 25⅖ sec.
P. Turnhill (3½ Norton), 28⅕ sec.

*Section B* :—
F. Sisson (3½ Norton), 25⅖ sec.
H. Petty (3½ Norton), 26 sec.

**Class 10.—Solo machines unlimited (on formula).**

*Section A* :—
H. M. Barron (3½ Norton).
P. Turnhill (3½ Norton).

*Section B* :—
F. Sisson (3½ Norton).
F. T. Hatton (6 Douglas).

NOTE.—"Section A" for amateurs and those who have never been placed first in an open hill climb or speed trial. "Section B" for all others.

# CHANGES IN THE LONDON-EDINBURGH.

## Start of Run at Hendon instead of Highgate.

INSTEAD of starting from Highgate, the competitors in the M.C.C. London-Edinburgh run on Friday, June 2nd, will leave the London Country Club, near Hendon, and will proceed towards the latter place, passing under the Midland railway line. They will then take the second turning to the left, cross the Great Northern branch to Edgware, pass through Page Street, continuing through Mill Hill past the school, and on to Highwood Hill. Here a turn to the right will be followed by a turn to the left, the Elstree-Barnet road being entered at Barnet Gate, a blind corner at which great care must be exercised. The route then turns right for Barnet, turns left on entering the town at the end of the Ornamental Gardens, passes through Union Street, and enters the Great North Road between the church and the Salisbury Hotel.

In the early morning, at the Doncaster control, competitors will be handed stiff number cards (size 6in. × 7in.) provided with eyelets and strings, which must be tied over the front glasses of the headlamps.

In their own interests competitors are requested to be punctual, and to ride in their numerical order on entering Ambleside previous to making the climb over Kirkstone Pass. By doing so, they will avoid baulking and greatly assist both their fellow-competitors and the officials. No excuse for being baulked will be allowed if competitors are more than three minutes early or late of their schedule time over this particular portion of the road. More than 200 entries have already been received for the run; entries close on Saturday.

# RESULTS OF THE TRAVERS TROPHY TRIAL.

THE results of the recent Travers Trophy Open Reliability Trial have now been published by the Newcastle and District M.C., which organised the event on behalf of the North-Eastern Centre (A.C.U.).

B. Kershaw, the winner of the Trophy, put up a very consistent performance on his 248 c.c. New Imperial.

Results, subject to confirmation by the A.C.U., are :—

THE TRAVERS TROPHY, with enamelled gold medal and cheque for £50, presented by Messrs. Travers, Ltd., Newcastle:—Bert Kershaw (248 New Imperial).

GOLD MEDALS.—R. Wilson (490 Norton), A. W Byers (349 A.J.S.), F. Turvey, Jun. (600 Humber), H. J. Stretton-Ward (499 Triumph), G. Grinton (988 Harley-D. sc.), E. Welsh (633 Norton).

ALAN ROBSON SHIELD, with enamelled gold medal for fastest time in hill climb:—Hugh Mason (494 N.U.T.).

For Best Performance by a member of the Newcastle and District M.C.:—R. Wilson (490 Norton).

For the Best Performance by a private owner on a machine under 300 c.c.:—T. R. Wilkinson (346 New Imperial).

For the Best Performance by a Private Owner on a passenger vehicle:—Major J. D. Johnson (7h.p. Jowett car).

For the Best Hill Climb performance on formula by a private owner:—T. W. Toovey (490 Norton sc.).

SILVER MEDALS.—F. G. Price (346 Diamond), T. R. Wilkinson (346 New Imperial), S. Bell (348 Beardmore B. and S.), R. Ellis (494 N.U.T.), Hugh Mason (494 N.U.T.), R. Bowness (494 N.U.T.), R. C. Bennett (269 Federation), L. A. Bees (348 Beardmore-Precision), A. Dixon (499 Rover), J. E. Reed (348 Wolf), C. L. Nordman (292 New Imperial), T. H. Weaver (736 Verus sc.), G. M. Townsend (555 P.-and M. sc.), B. L. Bird (770 B.S.A. sc.), B. Bourke (598 New Hudson sc.).

BRONZE MEDALS.—J. G. Doye (398 A.B.C.), A. Brewis (494 N.U.T.), K. J. F. Dixon (499 Sunbeam), Hugh Gibson (348 Raleigh), H. Adams. (248 Invicta), R. W. Loughton (248 Francis-Barnett), F. Stevens (348 Coulson), Davidson-Hall (249 Velocette), P. J. Bishop (348 Excelsior), Kaye Don (490 Norton), G. Greaves (490 Norton), C. W. Crosier (292 Invicta), Charles Webb (499 Sunbeam), Harold Pichard (490 Norton), Charles Webb (746 James sc.), Thacker (——), L. Newey (992 Ariel sc.), J. H. Walker (770 B.S.A.), T. W. Toovey (490 Norton).

## A FRENCH D.R.S. CLUB EVENT.

A TWENTY-FOUR-HOUR motor cycle road race for all classes of machines from 250 c.c. solo to 1,000 c.c. sidecar will be held in the eastern suburbs of Paris from May 27th to 28th. The event is being organised by the French Despatch Riders' Club, and has attracted thirty-four competitors. British machines are represented by a couple of 500 c.c. Triumphs, a 600 c.c. Triumph sidecar, and a Rover in the same class. The English rider Bartlett will start on a 500 c.c. Gnôme and Rhône, a machine on British lines

A very short circuit only seven miles from the gates of Paris has been secured for this unusual type of race. The start will be given at six o'clock on the Saturday morning, and the race, it is expected, will finish at six o'clock on the following morning.

AN ARDUOUS CLUB EVENT.—Competitors in Noah's Ark Watersplash, which was included in the Ipswich and District M.C.C. trial. E. T. Elliott (976 c.c. Matchless sidecar) and A. G. Mann (492 c.c. Sunbeam).

## *AN AMATEUR ASSOCIATION.*

Sir,—The A.C.U. has decided to refuse permission to the promoters of an Amateur T.T. Surely this, from a union or club which, after all, derives the money upon which its very existence depends from amateurs, is getting a bit too much of a good thing?

If the A.C.U. has decided to foster professionalism to such an extent, and in preference to the amateur members, the sooner that a new amateur sporting riders' club is formed, the better. I think that all your readers will agree that it is a remarkable thing that they have dared to oppose the interest of that section of the community that they are supposed to represent.

If the A.C.U. intends to continue along these arbitrary lines it will soon realise to its cost that it is better to follow out the bold statements made in its advertisements than to collect subscriptions from motor-cyclists, and then ignore them until next collecting day comes round.

After all, this high-handed action, behind which can be seen the manufacturers' dictation, only goes to prove that there is a time in the history of every union when only real service to its members can give stability, and if this is ignored, it surely means ultimate downfall.

It is high time that a new association, representing the motorists (private) of the kingdom, was started.

Hull. AT-4320.

Sir,—Though not a prospective entrant for the Amateur Race, I was looking forward to the event very much, wondering what certain machines could do in amateur hands.

There is no need for me to go over the objections raised by the A.C.U.; I think the word "influence" would meet the case. I back up "R.I.C.-Umph," who ought to have signed himself "R.I.P." PRO-UMPH.

Norwich.

Sir,—I read with interest the letter from "R.I.C.-Umph." There appears to be no doubt that the A.C.U. does not encourage amateur sport among motor cyclists as it should.

In the majority of sports there is certainly a line drawn between amateurs and professionals, but in motor cycling it is generally a hard task to distinguish between an amateur and a professional rider, and an amateur could easily enter for an A.C.U. event, thinking that it was for amateurs, and find himself up against professional riders with specially built and tuned machines.

The A.C.U. advertised in your issue of the 6th ult. for suggestions as to the best method of ensuring that every motor cyclist in the Kingdom should become a member of that body. I should suggest that the answer to this advertisement is obvious. Let the A.C.U. ask itself whether it caters for the ordinary amateur rider. If one looks through the list of A.C.U. trials and the winners thereof, it is apparent that the majority—especially the big events—are held for the benefit of the Trade.

I should very much like to see an amateur association formed for the whole of the United Kingdom, as amateur motor cyclists are practically out of the running in all big events in the sporting side owing to these events being swamped out with professional riders on specially built and tuned machines.

Should the idea of an amateur association be carried out, I should have much pleasure in being a member and giving it all the support possible, and I am sure that there are hundreds of motor cyclists who would only be too pleased to join an association which would be for amateurs only.

Burton-on-Trent. A.M.I.M.E., M.I.A.E.

Sir,—I note the suggestion of "R.I.C.-Umph" of the formation of a purely amateur association. I may say that I sent a shillingsworth to the A.C.U. a week or two back, suggesting that to attract more members to that body it must divide membership into two hard and fast classes, amateur and "pro," the same strict rules to define an amateur as in the few of our really clean sports. At present to all outward seeming the A.C.U. is run "to or for," and "by, with or from," the trade, and to the sporting amateur is only a hindrance. There is every possibility of motor cycling becoming a clean national sport. There seems in this year of grace every possibility of it becoming on a par with professional football and run like horse racing, only organised "stables" and professional riders having a chance. Already the jargon of the "stable" is creeping into notes on the T.T.

Unless the A.C.U. can realise that the private owner makes the manufacture of motor cycles possible, and becomes a riders' union and not a traders' union, motor cycle sport is doomed. Unless a separate body takes charge of the sport on strict and pure amateur lines, F.I.C.M., A.C.U., and international records (official!) are no more to the vast body of sporting private amateurs than are the much advertised wins of freak machines. How about a .

Festiniog. NATIONAL AMATEUR M.C.C.

Sir,—May I say that I am entirely in sympathy with "R.I.C.-Umph's" suggestion as to the formation of a separate body to control the amateur side of the sport? I have no objection to the motor trade, in which, indeed, I have many friends, nor have I any to competing against their riders, and it is obvious that the A.C.U. has no easy job. But there is no denying that the A.C.U. is somewhat autocratic in its methods, and that at the expense of the amateur. The T.T. races are beyond the capacity of the majority of amateurs, possibly as regards riding ability, certainly as regards cost.

I would suggest, therefore, that there is room for an amateur body, organising hill-climbs, reliability trials, and perhaps a road race, open to all amateurs, but to amateurs only, and freed from allegiance to the A.C.U.

In conclusion, I would repeat that the amateur need have no quarrel with the Trade, but surely it is time that the A.C.U., most of whose membership is composed of amateurs, woke up and did something for the people who keep it in existence. COCASSE.

London, W.1.

### DEFINING A LIGHTWEIGHT.

Sir,—I was glad to see by *The Motor Cycle* that there is to be a Lightweight T.T. this year, but why not make it a *real* L.W.T.T. by limiting the weight of the machines entered to 125lb.? EDMUND CANBY.

Geneva.

### ABOUT HEAT.

Sir,—In reply to Mr. W. E. Marsh's letter, my example of enclosing the cylinder in a glass box was only intended to represent a rough method of preventing the heat losses due to the air-currents, leaving only radiation losses, and not an accurate experiment. I hardly thought it necessary to stress that. The average man knows that glass is sufficiently transparent to heat waves to make it necessary to silver the inside of a Thermos flask, and if I had suggested a rock-salt or ebonite box (both of which are very much more transparent to the long waves than glass) it would have obscured rather than illuminated the point. And I intentionally said "practically transparent" to avoid such a side issue being raised.

But if Mr. Marsh is desirous of accuracy in inessentials his own statement that "glass will only transmit wave lengths whose size is about $5.9 \times 10^{-5}$ cm," must be examined.

Jena glass No. 0.451 has, according to Rubens' figures, a refractive index of 1.5430 for a wave length of 24900 A.U., and a refractive index cannot be measured if the body will not transmit the wave length; and 24900 A.U. can hardly be considered "about" 5900 A.U.

As for the part where my "mistake is most evident," I will not occupy your space further than to quote from text-books, as I am tacitly advised; except to remind Mr. Marsh that I expressly pointed out that I did not mean the usual convection currents produced by the rising of the, heated fluid—which words, however, Mr. Marsh omits in his quotation from my letter, thereby rendering it a misquotation.

(1) "Convection—the transference of heat through the change of position of the heated body."—"Century Dictionary."

(2) "Heat may be propagated by the actual visible transference of matter . . . this method of propagation is called convection."—"Watson's Physics."

(3) "Heat may be propagated by conduction. In this case the heat is conveyed by matter, but no visible motion of the matter itself takes place; the heat is usually considered as propagated by the warmer molecules heating the neighbouring colder molecules, and so on."—"Watson's Physics."

(4) "If convection is prevented we find that liquids are generally to be ranked with the worse conducting solids. Gases are also bad conductors, worse even than liquids."—"Poynting and Thomson—Heat."

In conclusion, I apologise to your readers for a letter of no interest to the majority, and one which I tried to avoid by the wording of my original one—and failed. P. BREWSTER.

Sir,—I have been much interested, and even entertained, by the correspondence arising out of the instructive and illuminating article on the "Radiation of Heat," by "E. N. J."

The correspondents do not seem to be agreed among themselves as to the physical explanation of the facts. Mr. Brewster makes some interesting statements, but is sufficiently answered by Mr. Marsh. Mr. Edwards also enters the arena, and "warns your readers" against an experiment the original author does not appear to have proposed, and on which "Niger" makes a comment.

But by far the most humorous letter is that of "Enil Maerts." This writer seems, not only to have exercised considerable ingenuity in inverting a common phrase for nom-de-plume, but in attributing to the author a statement not even remotely implied, much less made, by him. I refer to the first three lines of his letter. "Central Heating" is, I fancy, a common phrase applied to the warming of large buildings, not usually to motor cars of the ordinary type.

If I may be allowed a serious word in conclusion, I would like to say, as one not entirely unacquainted with the subject, that the experiments described by "E.N.J." are not only illuminating, but convincing. S.

### IMPROVING OUR ROADS.

Sir,—I have seen one or two letters regarding the abominable practice of tarring the roads and scattering loose gravel on the tarred surface. I should like to add my protest to the others. I have come to the conclusion, after ruining one pair of socks per day for a week in riding over the roads tarred in this manner, the tarry stones being flung back over my feet and legs from the front wheel, that the British public, or that section of the public that uses the roads, must have infinite patience to stand this inefficient method of road-mending year after year in the way it has done. If the roads must be tarred and spread with gravel, they might at least be rolled afterwards. This would break up the stones at once instead of leaving it to the traffic to do, to the intense annoyance of cyclists, motor cyclists, and car owners. C. S. BOOTH.

Sir,—Touching upon the question of our present day road surfaces, why not build our steam-rollers to a weight specification, keeping in mind the weight of the heaviest loaded vehicle using the roads, with the whole of its weight concentrated on two fairly narrow tracks.

Allowance should also be made for an increase in traffic and heavier transport in the future.

If the above problem was considered we should probably see on our road repairs steam rollers of twice or thrice their present weight. Macadam under great pressure and tar sprayed should give a good hard surface. PB-3547.

Wallington.

### SHAFT DRIVE AND REAR SPRINGING.

Sir,—The spring frame and shaft-drive combination is never seen on the road. I maintain that it is not a feasible design, there being too much weight on one side of the wheel, which would result in the wheel failing to maintain its alignment in a vertical plane, uneven tyre wear, uneven wear of the bearings of the spring frame and skids. Is this so? It might be counteracted by (*a*) a corresponding dead weight on the other side of the wheel; (*b*) springs of different relative strengths. The old T.A.C. or T.M.C. employed this combination, nevertheless—with what success?

G. KINGDON.

IN THE MONTH OF MAY ON THE DEVIL'S ELBOW. The original plan was to include this hill in the Scottish trials, but as there was a likelihood of one or two competitors complaining of the Arctic conditions illustrated by this recent photograph it was cut out of the route.

### SIDECAR ALIGNMENT.

Sir,—Recent editorial comments upon the frequency with which one meets badly set-up sidecar outfits prompts me to send you a few lines which, if given the hospitality of your columns, may help many a worried owner to locate the cause of his inability properly and permanently to line up his outfit.

Last summer I had a touring sidecar made by a well-known English firm to suit an American heavyweight cycle. The complete car and chassis cost practically £50. The first thing I had to do was to add another plate to each of its four springs, though my passenger is but 9 st. Then I found it impossible to get the car lined up so that it would stay "put," and not until early this spring (I confess it with some shame, since I am not precisely a novice, after forty years' general mechanical experience) did I discover the cause.

I finally discovered that the chief remaining difficulty with the car was—the shanks of the three bent connections to the cycle were all fully 1-16 in. less in diameter than their corresponding holes, or sockets! No matter how tightly I screwed up the nuts on the shanks. I found that, since *they were parallel,* I could rotate each one by hand with comparative ease!

Should not these shanks, and of course their corresponding holes, or sockets, have Morse tapers? It seems to me an elementary requirement. At any rate, I proceeded to get as near the Morse taper as would remove the cause of my difficulty in the following way.

First cleaning up each shank, I made and "sweated" on a tubular mild steel liner of 1-16 in. sheet. Working entirely by hand, with files and carborundum (and of course a lot of patience), I finally arrived at a taper fit at each of the three bends, and since lining up the job two months ago I have had no further trouble in this connection.

J. ATKINSON.

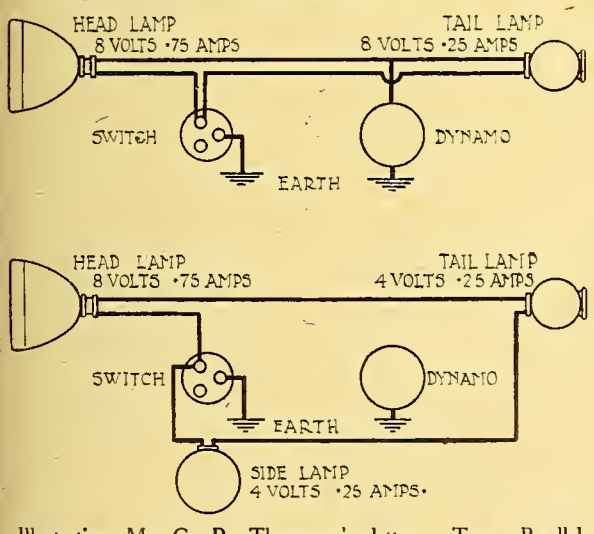
### "DYNAMOS FROM OLD MAGNETOS."

Sir,—With reference to the article by "W. R.," I find it to be somewhat misleading, and likely to complicate matters for the amateur, instead of simplifying them. I do not think it necessary to go into complicated calculations in Ohm's law. If the converted magneto is capable of generating 1 ampère at 8 volts, then the combination of lamps should be—8 volts .75 amp. for the head-light, and 8 volt .25 amp. for the tail-light. Lamps of less than .5 amp. *can* be obtained at any electrical engineer's. This combination is suitable for parallel wiring, and the fact of either lamp burning out or breaking would *not* cause all the available current to flow round the remaining lamp, which would simply draw its proper current from the generator.

If a light for a sidecar is desired, the combination would be slightly different. Head-light, 8 volts .75 amp., tail-light, 4 volts .25 amps., and side-light 4 volts .25 amps., but the side and tail-lights would have to be wired in *series.* This arrangement would still keep the maximum current down to 1 amp., and the head and tail-lights would not be reduced at all. Another advantage of this arrangement would be, that the side-light would serve as a tell-tale to the tail-light, in that, if either lamp burns out or breaks, the remaining lamp will not light, so that the driver seeing his side-light burning knows definitely that his tail-light is also burning.

I enclose a rough sketch of connections to illustrate my point.

GEO. R. THOMPSON.



Illustrating Mr. G. R. Thompson's letter. Top: Parallel system, providing head and tail lamps only. Bottom: Series parallel system for three lamps.

### TEMPERAMENTAL ENGINES.

Sir,—I have a 1921 T.T. Rudge Multi, which over a certain stretch of road invariably goes "mad" for a distance of five miles.

The road in question is particularly high, and the air is usually cooler there than in the surrounding country; this may account for a sudden burst, which apparently seems to be "all out" on a touring throttle opening. The machine romps uphill and down dale with seemingly no limit to its capabilities.

Apart from this fact, I have found the engine extremely temperamental. Sometimes sluggish and unwilling, and at others, against even a head wind, it slogs away with remarkable endurance.

Up to the present I have resigned myself to the fact that it was the driver and not the machine, but the experiences of other correspondents give me hopes that I shall eventually attain my ideal, viz., 60 on the road; not on paper.

Manchester. MULTI.

### H.P. RATINGS.

Sir,—With regard to your leader, whilst agreeing with the idea of calculating the horse-power on the cubic capacity at 100 c.c. per h.p. in the case of ordinary four-stroke machines. I should like to raise the point with your readers as to how two-stroke machines would be treated.

I believe I am right in saying that a two-stroke machine develops about 50 per cent. more power actually than a four-stroke machine of the same capacity. SOLO.

Cobham.

[In practice nowadays there is very little to choose in the comparative efficiency of two-stroke and four-stroke engines of the same "cubic capacity."—ED.]

### SHAFT AND CHAIN DRIVE COMPARED.

Sir,—Although Mr. Weaver may be a designer of motor cycles, while I am merely a rider, I cannot allow his letter to pass unchallenged.

Any pocket-book or treatise on mechanics gives, I think, an efficiency of at least 97 per cent. for a gear drive.

Absolute transmission silence and an ideal lay-out is provided by an "under" worm and shaft drive, and Mr. Lanchester claims an extremely high efficiency for worm gears cut in accordance with his principles.

An efficiency of 97 per cent. leaves very little margin for improvement, and I doubt if a chain in an oil bath could improve on it. The 15 to 20 per cent. superiority which Mr. Weaver claims I confess myself unable to understand. The average cycle chain is quite unprotected, and exposed, as it is, to all grit and dirt, its efficiency under such circumstances is not likely to reach 97 per cent. Even if well smothered in grease, etc., the dust, which then sticks all the more, gets pushed and worked through into the chain to a considerable extent.

## T.T. AND 1,001st NUMBER.

**On June 1st "The Motor Cycle" will celebrate its 1,001st consecutive issue. Nearly twenty years ago, when this journal was first published, the motor cycle movement was only just developing. The 1,001st issue of "The Motor Cycle" will contain many special articles and illustrations of exceptional historical interest; and, appearing on the date of the Senior Tourist Trophy event, particulars of the T.T. Races in the Isle of Man will form a feature.**

*Orders for copies of this enlarged issue should be placed in good time—Fourpence as usual.*

When in addition to being open the chain is neglected, the horse-power which it wastes must be enormous. Such chains, when removed, can almost be used as fishing-rods.

I bought a shaft-driven machine solely on account of its transmission, and though I swear at the machine for many reasons my faith in its transmission has proved completely justified, and my wrath is never directed thereto.

A shock-absorber is, however, very necessary on a single-cylinder, shaft-driven machine.

I think that most of the prejudice against the shaft drive lies with the manufacturers, not with the public. F. N.

Sir,—How anybody in the trade could state that the difference in efficiency between shaft drive and chain drive is 15 to 20% beats me, and the poor layman will surely be wondering how it is that ninety-nine out of every hundred motor cars running about are fitted with a form of drive showing such an awful comparison with the chain drive. It would be interesting to learn where Mr. Weaver obtained his information.

As a matter of fact, the difference between bevel and chain drive is less than 1%. But, so far as motor cycles are concerned, it does not rest here.

The comparative tests have been made with simple single chain drive, *i.e.*, one chain running over two chain wheels. Chain-driven motor bicycles are fitted with *two* chains, which involve the use of *four* chain wheels, so that the loss in transmission is doubled, which makes all the difference.

Incidentally, there are extra shafts and their attendant bearings needed to accommodate the extra chain wheels, and where there are bearings there is friction.

There are motor bicycles made in which the transmission is a mixture of both bevel gearing and chain, and others which drive from engine to gear box through a train of gear wheels and from gear box to back wheel by chain. Neither of these machines are exactly unpopular.

Mr. Weaver states that "the success of the modern motor cycle is undoubtedly due to the fact that for its power it is capable of doing much more work than any other machine on the road, and this is chiefly because of its higher transmission efficiency."

Does Mr. Weaver seriously think that the transmission of a modern motor bicycle is higher than that of a motor car with shaft and bevel gearing? I opine that no engineer will agree with him.

So far as the F.N. shaft-driven motor bicycle is concerned, far from finding it unpopular, its popularity increases each succeeding year, and has done since it was first manufactured in 1905.

In conclusion, perhaps I may be permitted to refer to a referendum of well-known trade personages taken by *The Motor Cycle* in 1913, and concerned with the type of motor bicycle of ten years hence. The analysis showed:

Twenty-one plumped for shaft drive.
Eleven for chain drive.
Seven for belt drive.

HARRY G. BELL,
Sales Manager, F.N. (England), Ltd.

## *STEREOTYPING THE RELIABILITY TRIAL.*

Sir,—I notice from your last issue that the Competition Committee of the A.C.U. will shortly be considering the question of the inspection of the trials courses got out by the various centres for open competition. The suggestion emanates from Major Vernon Brook, and coming as it does from such a good sportsman, and so experienced an authority, it is worthy of the closest consideration.

Personally, however, I cannot help but feel that this is the first blow to be struck at the liberties of the centres. Trial courses are at present the outcome of the deliberations of some half-dozen or so, and it does seem a little arbitrary to have one representative from headquarters empowered to override the considered judgment of the many who are on the spot, and have had every opportunity of seeing men and machines working previously under given conditions. The whole question of the advisability of the inclusion of certain sections is entirely a matter of opinion. I have in mind a recent trial in which the promoters wavered whether to include a certain hill, but ultimately did so. An experienced A.C.U. steward termed it "freakish," but certain Pressmen thought it quite reasonable, but branded as "freakish" another "tit-bit" about which there had been no hesitation. The present proposal goes to stereotype the reliability trial, but to allow a free hand to the Centres makes for the provision of a variety of types, which is the spice of competition life, and also gains the confidence of the local public. Organisers know very well that all the opposition which there is to courses of a certain nature comes only from the same côterie of unsporting competitors.

Various promoters have various objects before them. There are those who take numbers alone as the criterion of success, and who try to attract a good entry annually by building up a reputation for the supply of "cushy golds." But there are others who take spirit, sport, and progress as their ideals, and endeavour to further the evolution of the motor cycle by tackling new problems and exploring new territory. Approval or disapproval will be reflected in the support accorded to future events, but it is for each centre to work out its own destiny along whichever of the courses it chooses to take, without having to submit to the fatherly advice of some well-meaning person sent by headquarters.

The whole question can be traced to the want of firmness of the Union in the Six Days' Trial of 1920 at Darlington, and it would be a very ill-advised step indeed to force such a weak-kneed policy on to the local centres, for I am convinced that a certain clique is at the bottom of the whole business.

I am aware that it has been objected that some trials have failed entirely to be of any service as media of propaganda. But such a statement is based on the belittlement of the powers of discernment of the public. One thing is certain. The growing general interest of late years in these events is making it more and more unnecessary to give the reminder: "This is not a race," and that increasing interest will soon be demanding to know the relative values of these trials, to sort out the gold from the dross, and to differentiate between their respective worths—on the one hand between those in which there is a real earnestness of purpose, and on the other between those of insincerity and "gallery play," in which nothing is attempted unless success is assured beforehand.

There is such a tendency now prevalent that it may not be long before it is left to the closed local event and the private owner to illustrate the possibilities of the modern machine and to the open trial to provide a monotonous, idle, and vain procession of sparkling mounts.

Let it not be said that by restraining the centres the Auto Cycle Union, perhaps unwittingly, did anything which might possibly be interpreted as the pandering to commercial interests by a body which has so justly declared that it stands for the betterment of the motor cycle, for sport and for the interests and guidance of the general public.

K. S. TOPPING.
Hon. Sec., East Midland Centre, A.C.U.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle*.
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

# LESSONS FROM LIEGE.

## British Clubman gives his views on an important Continental Competition.

BRITISH competition riders are apt to regard all but the most important Continental motor cycle events in a chary mood. Therefore the experiences of Mr. J. N. Longfield, the Chairman of the Yorkshire Centre A.C.U., at *L'épreuve Internationale, Côte de Mont-Theux*, held on the 6th inst. by the Liége M.C.C., should prove interesting, Mr. Longfield's story follows :—

"It had often been my wish to go over to Belgium or France to see how the clubs on the Continent organised and ran their hill climbs, so I jumped at the opportunity of accompanying Geoffrey Boston and his cousin when they went over to Belginm for the *Côte de Mont-Theux* event.

"We left London at 8.30 on the previous Friday morning, and arrived at Liége about 8.30 the same evening, being met by M. Maurice Bury, the energetic secretary of the local club, who placed at our disposal two cars, one for the little A.J.S. and sidecar and the other for onrselves.

"Early next morning we left Liége for the hill, which was situated on the main Liége-Spa road, about twenty kilometres from Liége.

"The first point which impressed us on arrival was the absolute suitability of the hill. Starting with a perfectly level run, for the flying start, of approximately half a kilometre on fairly good *pavé*, the climb proper commenced about 500 yards before the one and only bend, this bend being a perfect curve to the left and just difficult enough to test the rider's ability in cornering. After this curve the hill continued to well over a kilometre past the finish, at an average gradient of about 1 in 8. The surface was the most perfect I have ever seen, and consisted of hard macadam; I do not think there was a loose stone from the start to the finish.

"Timing was by synchronised watches, the length of the climb being one kilometre. The timekeepers were in telephonic communication with each other,

Great enthusiasm and excellent organisation prevailed at the Mont Theux hill climb—as witness the roped course—when G. S. Boston (349 c.c. A.J.S.) succeeded in winning both the sidecar and solo trophies. Boston sweeping up in the passenger class.

and red and white flags were used to indicate when each competitor could start. The whole of the course was roped on both sides of the road, from the beginning of the flying start to well past the finish; there was also a large body of gendarmes distributed around the roped section. There was no single incident of competitors or organisers becoming worried or perturbed by spectators, although there were a large number of the latter present. Great care had been exercised in roping the curve.

### Punctuality.

"The climb started at exactly the advertised time, 10.30 a.m. Each class was given a certain speed to attain, the rider who exceeded that speed by the greatest amount being the winner of the trophy. Medals were also given for the best increase in each class. All the sidecars went up first, and on the last man reaching the summit, they all returned to the starting point, when they had another run. After the sidecars abont a quarter of an hour was allowed for sidecars to be removed, gears altered, etc.; then the solos had two runs up each. There was absolutely no delay, the programme was strictly adhered to, and the whole event was over by 1 p.m., although there were in all over ninety ascents. In short, it was one of the best organised events it has ever been my fortune to witness.

"Boston carried all before him, winning the *Coupe la Wallonie* outright, and the *Coupe John Bull*, the latter to be held for one year. His solo times were only beaten by one or two of the 1,000 c.c. machines, and then by nowhere near a sufficient margin to entitle the latter to the cups. His victory was a most popular one, the Belgians in particular showing their admiration and pleasure.

"I have only three criticisms to make, and they are : (1) I consider the solo machines should have gone up before the sidecars; (2) a more organised park should have been arranged for competitors behind the starting line; and (3) on completion of the ascent competitors should have been marshalled right off the road."

# ROYAL MOTOR RACE MEETING.

IN aid of the Middlesex Hospital and the Industrial Welfare Fund the Royal motor race meeting, to be held at Brooklands by the Essex M.C. on Saturday next, has received most excellent support. It will be under the direct patronage of H.R.H. the Duke of York, himself a motor cycle enthusiast, who has entered a Trump-Anzani and a Douglas, to be ridden by his chauffenr. The meeting will be attended by the Duke of Athlone and nnmerous other royal personages, and is expected to attain much prominence socially.

The first motor cycle event is "The Duke of York Three-lap Junior Handicap," distance about 8½ miles, for solo machines not exceeding 500 c.c. For this event thirty-six entries have been received. For the equivalent "Senior" handicap, for machines not exceeding 1,000 c.c. (entries in this class may be limited to machines with an observed speed of 70 m.p.h. or more), fourteen entries have been sent in. The last race in which motor cycles will take part is the Essex three-lap passenger handicap over the same distance for 1,000 c.c. sidecars and three- or four-wheeled cycle cars up to 1,100 c.c. There are nineteen entries.

In addition there will be several car events. Racing begins at 1.30 p.m., but the gates will be opened to the public at 11.15 a.m. Admission is 5s., but tickets purchased before Saturday from Mr. A. G. Reynolds, 95, Fillebrook Road, Leytonstone, London, E.11, cost 4s.

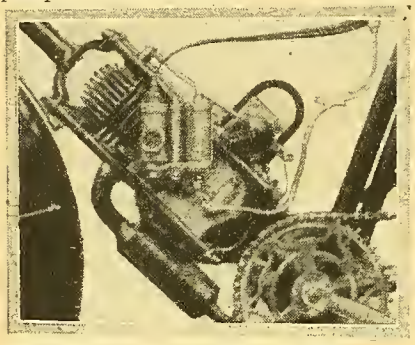
Those who purchase tickets before the day may participate in a competition for a 4 h.p. Harley-Davidson, value £115, presented by Mr. Duncan Watson.

# A TRUE LIGHTWEIGHT.

THERE has always been a very considerable demand for a really light motor cycle to fill the intermediate gap between the pedal cycle and the lightweight motor cycle. From time to time various machines have been designed and marketed to fill this need, and the most recent addition to this class is the Airolite, which is about to be marketed by the Small Engines Company, of 131, Coventry Road, Birmingham.

The manufacturers are responsible for the Simplex 1¼ h.p. pedal cycle attachment, and it is a similar power unit which is now built up in the frame of the lightweight illustrated.

Having a bore and stroke of 50.8 mm. × 50.8 mm. (103 c.c.), the engine is of the normal three port two-stroke type, but an overhung crankshaft is employed and is carried on two ball bearings in a phosphor bronze shell. The bearings

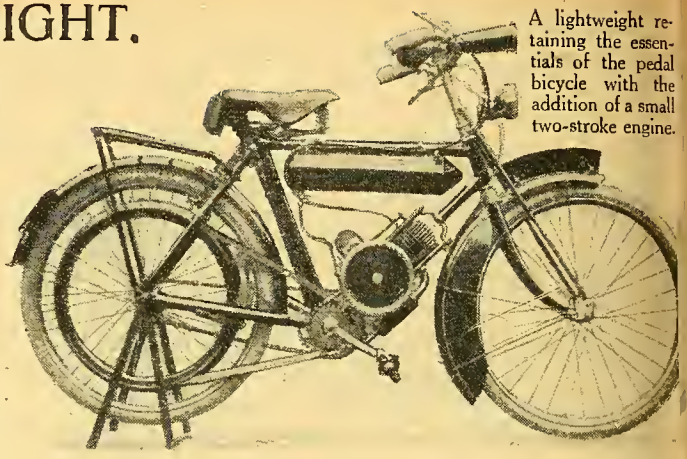


The 50·8 × 50·8 mm. two-stroke engine which is carried within the front member of the frame.

**The Airolite, a Pedal-assisted Two-Stroke Motor Cycle of 1¼ h.p.**

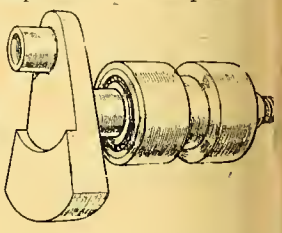
are widely spaced, and the gap is bridged by part of the shell which surrounds the crankshaft, and forms an additional plain bearing and compression retainer. This engine unit is held between four long bolts which form part of the down tube of a strengthened cycle frame. It can be very easily detached or moved with its clamping plates for the purposes of chain adjustment. On the rear plate is mounted a Fellows' "Baby" magneto, and from the crankshaft there is a chain drive to a ball-bearing countershaft. This countershaft, which also carries the belt pulley for the final drive, is mounted on an extension of the pedal crank bracket, and in no way interferes with the pedalling gear. The cycle parts are neat and strong, and are specially manufactured by a very well-known firm of cycle and motor cycle manufacturers.

Including luggage carrier, tool bag, number plates, etc., the whole machine weighs less than 70lb., and sells at the very moderate figure of 27 guineas.



A lightweight retaining the essentials of the pedal bicycle with the addition of a small two-stroke engine.

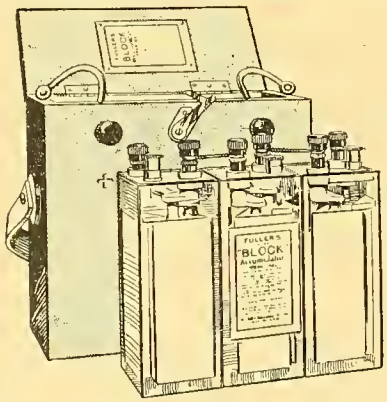
It is claimed that the tiny engin will propel a rider of normal weight u all ordinary hills without pedal assist ance, and that it will attain a speed o 15-20 m.p.h. on level roads. Such machine should meet with a very larg demand, for there is an immense num ber of potential motor cyclists who hav no desire for high speeds, and are some what afraid of the weight of the mor usual type of motor cycle. With a view to appealing to this public the control have been simplified as far as possible.



Two ball bearings in a phosphor-bronze shell support the overhung crankshaft.

## INEXPENSIVE LIGHTING BATTERY.

MANY motor cyclists who do not wish to go to the expense of a dynamo lighting outfit are disposed to invest in battery lighting with a battery of proved efficiency and of large capacity. Such a lighting battery can be obtained at a very reasonable cost in the shape of the Fuller block accumulator supplied to the Services during the war, which are of 6 volt, 20 amps, actual capacity. They are practically one-third cheaper than the list prices, and are sold in an excellent box with a leather handle, being highly suitable for sidecar outfits. The electrodes of the cells are so constructed that they are free from injury caused by vibration, short-circuiting, and sulphating. The batteries supplied are genuine block type Fullers in 2-volt cells, sold in groups of three, at the price of £2 19s. 6d., by The City Accumulator Co., 79, Mark Lane, London, E.C.3.

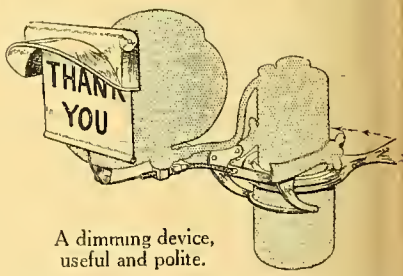


Fuller block accumulator sold by the City Accumulator Co. complete with box.

## A GAS LAMP DIMMER.

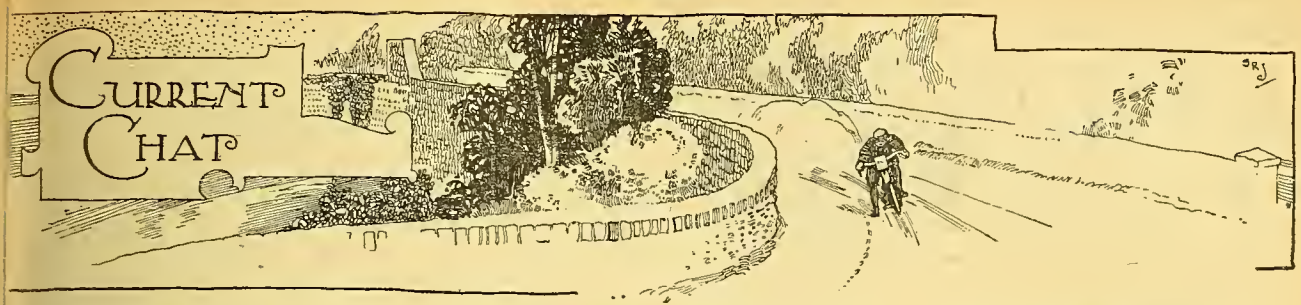
TO dim or not to dim, is even yet a much-discussed question, but whatever be the rights of the case there is undoubtedly a large percentage of riders whose natural courtesy demands that they should cut out the offending rays on approaching a vehicle travelling in the opposite direction. Even if one's own lamp is not of unduly high power it is pleasant to be able to acknowledge the dimming of headlights on an approaching car

With this end in view a simpl "shutter" has been designed by Mr. T Wheadon, of Mentone Road, Parkstone Dorset, for use with acetylene lamps. A special hood is made for the lamp front and within this hood lies a miniatur roller blind normally held in the con cealed position by a spring. The lowe edge of this blind is attached by means of a Bowden cable to a lever surrounding the generator, and by moving this lever in



A dimming device, useful and polite.

a clock-wise direction the blind can be lowered in order to cut out the dazzling rays. In the example which we have examined the blind was inscribed with the words "Thank you," presumably as an acknowledgement of the courtesy of others.



## Times to Light Lamps.

| | | |
|---|---|---|
| May | 18th .. .. | 9.46 p.m. |
| „ | 20th .. .. | 9.48 „ |
| „ | 22nd .. .. | 9.51 „ |
| „ | 24th .. .. | 9.55 „ |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### British Win in Italy.

In the Cremona Circuit a private owner, Ernesto Sironi, was successful in carrying off the first prize on a Norton.

### Paris-Pyrenees Trial.

On account of the late spring, which has resulted in the passes of the Pyrenees being still covered with snow, the trial will be postponed until June 11th to 18th.

### No Consumption Tests in Six Days Trials.

Owing to difficulties in organisation there will be no petrol or oil consumption test during this year's A.C.U. Six Days Trials.

### For Naval Officers.

To suit naval officers' leave, July 7th and 8th have been finally settled as being the most convenient dates for this year's Arbuthnot Trophy trial.

### Safety in Competitions.

So as to avoid accidents to competitors or spectators, the Auto Cycle Union has sent notices to clubs urging that due precautions should be taken in the running of closed hill climbs.

### Isle of Man Car Races.

Exactly the same length of course—37¾ miles—and the identical roads as those in the motor cycle races are to be used in the car races organised by the R.A.C. on June 22nd.

### New President of Manufacturers and Traders Society.

Lt.-Col. J. A. Cole, O.B.E., J.P., deputy chairman and managing director of Humber, Ltd., has been elected president of the Society of Motor Manufactures and Traders in succession to Sir Alfred Mayes-Smith.

### Double Twelve-Hours Records.

In place of continuous twenty-four hour records official recognition will now be made of two twelve hours' consecutive records. Between each there will be twelve hours' rest, during which time the machine must not be touched.

### Yorkshire's Rough Riding Trial.

Arrangements have been made with the Auto Cycle Union to hold the Scott Trial this year on September 9th.

### Oil in New Zealand.

Oil has been discovered in Murchison, N.Z. A Nelson motorist writes most enthusiastically about it, as he considers the oil to be of fine quality.

### A Motor Track for Spain.

At Barcelona, which is the centre of the automobile movement in Spain, there is talk of erecting a speed track. Plans have already been got out for a two kilometre course.

### A Belgian Trial.

A reliability trial of some 80 miles in extent was recently organised by the Moto-Club de la West Flandre. It comprised a slow test and a speed test over one kilometre. Results were: 1, Breslau (Norton); 2, Givelet (Indian Scout); 3, Gauchie (Norton).

### Freak Consumption.

Most petrol consumption trial results may be taken with the proverbial grain of salt. Recently, an event in Christchurch, N.Z., was won by the rider of a 580 c.c. twin, which covered forty-four miles on slightly less than a pint of petrol —356 m.p.g., which just shows what can be done by taking the matter seriously.

### Two Important Continental Competitions.

Two competitions to be held on the Continent this year which especially merit the attention of British manufacturers are, among the speed events, the Grand Prix of the U.M.F., to be held on July 12th, and, among reliability trials, the International Six Days Trials, August 3rd to 9th. Particulars can be obtained from the Secretary of the Auto Cycle Union, 83, Pall Mall, London, S.W.1.

### Toll Gates.

Feeling that time is opportune for general action directed towards the abolition of road tolls, the Automobile Association has approached all the interested highway authorities. Its representatives have been well received, and, though the financial difficulties involved are considerable, it is felt that the sooner they are faced the better. The Association holds that the payment of toll charges conflicts with the accepted policy that the special tax on motor vehicles—at present iniquitous because it is not proportionate to use—gives the right to free passage on the roads.

## Special Features.

TIMING HIGH SPEED RECORDS.
SIX DAYS IN SCOTLAND.
T.T. NOTES AND NEWS.

### The Tourist's Machine in Spain.

Motor cycles and sidecars may be introduced into Spain for touring purposes if they are provided with a triptych issued by the Automobile Association and Motor Union of London under guarantee of the Credit Lyonnais in Madrid.

### Road Improvements in North Wales.

Formerly narrow, tortuous, and hilly, the old main road from Llandudno to Conway has been improved and rendered suitable for modern conditions. In the region of Tyn-y-Coed hill the carriageway has been widened and a footpath added. Improvements have also been made in the road from Llandudno Junction and Conway to Llandudno, while the danger which existed at the Llanthos cross road near Colwyn Bay has been removed.

### Daffodils.

In the springtime one hopes to find the daffodils "beside the lake beneath the trees," but one hardly expects to find them in the heart of London. Yet, the other afternoon, the yellow flowers made a small portion of Pall Mall resemble the Promenade des Anglais at Nice after the battle of flowers. The occurrence was accidental, for a motor cyclist, careering gaily westwards, suddenly shed the contents of a florist's hamper, and scattered the highway with these beautiful emblems of spring.

### Closing a Recent Trial Route.

As originally intended the route of the Western Centre A.C.U. One Day Trial, which goes down to history as the "Arctic Trial," was laid up Rectory Lane and over a rough colonial section known as Cadbury Camp, in the vicinity of the lunch stop at Clevedon, Som.; being snowbound, of course, this part was omitted.

The landowners have since erected a fence and gate, with warning notices apparently with the object of closing this section to public use; as it has been a well-used track for many vehicles, to say nothing of walkers and cyclists, for many years past, naturally objection is being raised by the local authorities; it is stated to have been the main coach road to Clevedon at one time.

# CLUB NEWS

1. W. Ashworth (499 c.c. Rudge) climbing Pen-y-Ball, Holywell, at the Liverpool M.C. Hill Climb.

### Buxton and District M.C.

Speed trials for May 28th have been arranged at Rushup Edge, Chapel-en-le-Frith, commencing 2 p.m., over a flying half-mile distance. The secretary is Mr. R. H. Millington, Buxton.

### Gateshead and District M.C.C.

A new club has been formed at Gateshead and given the name of the Gateshead and District M.C., and already boasts about twenty-five members.

It is intended to confine the club's activities to social runs.

### Bristol Sports Club (Motor Section).

For the Douglas Cup one-day run on May 21st over a route laid in the Wye Valley the first prize will be the Douglas Cup and gold medal, and the five following runners-up will each receive a gold medal. Entry forms must be sent in to-day to Mr. F. Lane, Black Swan Hotel, Eastville, Bristol.

### Stourbridge and District M.C.C.

The opening run of the 1922 season took place on April 30th, in the form of a trail-less trial, over 40 miles of main road, with two time checks and a stop and re-start test included. A secret check was taken to determine winners. Results:

1, H. E. Wilson (Sunbeam sc.); 2, H. K. Palfrey (Triumph); 3, F. Ferriday (Omega). The winner's error was 1m. 32s.

### Pietermaritzburg M.C.C.

Bright but gusty weather favoured the 'Maritzburg club's first trial to Camperdown and back for the Mountford Trophy. First on handicap: C. H. Young (3½ Triumph), but a splendid performance was put up by R. Blackburn's A.B.C., the rear springs of which collapsed just as he reached home. The smallest machine in the race was a 211 c.c. Cedos, ridden by A. R. Morcom. The second and third competitors in the event were H. B. Loader (Harley-Davidson) and R. G. Goodwin (2¾ Royal Ruby).

### Punjab M.C.C.

A most successful gymkhana meeting was held on the 9th ult., upwards of thirty members taking part. British machines scored all round. In the "bending" R. McV. Hofford (Douglas) was first, A. J. Walenn (Triumph) second; "tilting the ring," R. McV. Hofford (Douglas) and J. Evans (Douglas) first and second respectively; "catching the ball," T. O'Leary first. The above results prove the flexibility and controllability of the British engine as compared with those of foreign manufacture.

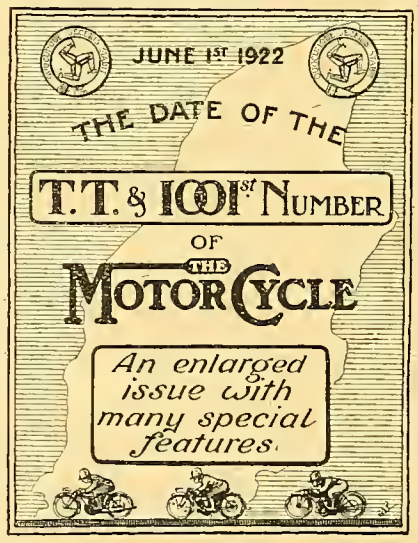
### Neath and District M.C.

The second speed final of the season will be held in the beautiful grounds of Margam Park (kindly lent by Captain Fletcher, J.P.), on May 20th, at 2.30 p.m.

All classes will be catered for, and entries are to be taken on the course.

### Bulwell M.C.

Although the weather was far from promising, 16 members turned up to take part in a paper-chase on the 23rd ult. The trail was laid by F. H. Wallis, who finished at the Peacock, Belvoir Castle, where the competitors had tea. W. Bales (2¾ Raleigh) was adjudged the winner of the prize given by one of the members.



### North London M.C.C.

On Monday, May 1st, the club was "at home" at the town headquarters, Ye Olde Gate House, Highgate, and a most interesting and amusing evening was spent. This is the third social that has been held, and judging by the attendance these functions are becoming very popular, and they are now being held on the first Monday in each month.

### Wellington M.C. (New Zealand).

Successful racing was a feature of the first meeting held this year on the Miramar course, which was in fair order In the five-lap solo race the results were: Southwood (Triumph), Dimock (Triumph), Goddard (A.J.S.). In the five-lap sidecar class McAustin (Harley-D. sc.), Clouston (Harley-D. sc.), and Thompson (Harley-D. sc.). Harley-Davidsons were first, second, and third in the relay race. The maximum number of points was scored by Dimock (Triumph).

### Croydon and District M.C.C.

In spite of indifferent weather conditions the opening run of the above club was attended by a large and representative number of riders. Numerous well-wishers gathered to give the club a send-off, and after an official photograph had been taken, a start was made for Bletchingley, where tea was taken at the club country headquarters. Tea was followed by a short musical programme and a surprise competition for the best-kept machine was won by D. Knight (Sunbeam). The skilful handling of their machines by the two lady members augurs well for their success in the club competitions during the year.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### IGINE WON'T STOP ON THROTTLE.

The engine of my 490 c.c. single will not run slowly, and, although I have lowered the needle of the B. and B. variable jet carburetter to its fullest extent, the engine will not stop on the throttle. No air leaks are present. How can I improve this?—C.H.J.

r leaks or an excessively rich mixture e usually the cause of the engine refus- g to run smoothly; it may be, however, at the throttle barrel is badly worn in e carburetter, or that for some reason it prevented from closing off absolutely ıen the lever is in the closed position; amine the control cable carefully, as me of the strands may be broken, thus eventing the throttle from reaching the nit of its travel.

### TYRE TROUBLES.

I have had a good deal of trouble lately with my 650 × 65 mm. tyres on a 499 c.c. Rudge, yet they are apparently in good condition. Could you suggest any cause for these mishaps?—H.G.P.

ou do not say definitely what form your re trouble takes, but the assumption is at you have had more than an ordinary ımber of punctures If the punctures e due to nails, etc., you cannot alto- ether blame the tyres, as even the best covers may be pierced at times. If outside puncturing agent has caused ıe trouble, it may be that the ends of ıe spokes project through the nipples the rim and so puncture the tube, or a uantity of grit may have dropped into ıe covers at some time when the tyres ere refitted. Various attachments are ıarketed to deflect nails, etc., and some the modern puncture sealing inner ıbes are quite satisfactory articles.

### AN OLD ENGINE.

Twelve months ago I bought a motor cycle, and it has never run satisfactorily. It is a 2¾ h.p. four-stroke. I have recently overhauled it and fitted the following parts: cylinder, valves, rings, connecting rod, bushes, and jet, and have had the crank-pin and shaft ground up true. It has been returned as follows: magneto retarded, with piston on top centre of expansion stroke; exhaust valve closing on top of exhaust stroke, inlet valve opening immediately after and remaining open until bottom of induction stroke. The petrol level is 1-16in. below the top of the jet (No. 34), and the gear is 6 to 1. I should like to know if it is timed correctly, also if the balance is affected by the fact that the new connecting rod is ¼oz. heavier than the broken one. I can only get about 30 m.p.h. on level, and the machine will not climb even a small incline. When the machine is on the stand and I turn the back wheel with my hand I can just pull the engine over compression. Is this good enough?—A.C.

The valve timing appears to be correct; the magneto should be timed so that the spark occurs on top dead centre of the compression stroke with the ignition control two-thirds retarded. The slightly greater weight of the new connecting rod will not make any appreciable difference to the balance of the engine. It is possible that the new parts which you have fitted are not properly run in; maybe the piston or one of the bearings is rather tight. The engine may not develop its normal power until it has been run some distance. The compression also will probably improve as the new parts become bedded in with continued running. The new piston and rings especially will be some time before they come into their best condition; from your description, however, there does not appear to be anything wrong in this direction.

## Important Dates.

**Sat., May 20th—S.-Western Centre A.C.U. Open Reliability Trial.**
**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs., June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**
**Sat., June 10th—B.M.C.R.C. Open Meeting at Brooklands.**
**Sun., June 11th, to Mon., June 19th—Paris-Pyrenees Trial.**
**Sat., June 17th—Yorkshire Centre A.C.U. Open "Colonial Trial."**
**Sat., June 17th—Ealing and Dist. M.C.C. 200 Mile Sidecar Race. Brooklands.**
**Fri., June 23rd, and Sat., June 24th—Irish Twenty-Four Hour Open Trial.**
**Sat., June 24th—Midland Centre A.C.U. Open Reliability Trial.**
**Sat., July 1st—East S. Wales Centre A.C.U. Open Speed Trials.**
**Wed., July 5th—Eastern Centre A.C.U. Open Speed Trials.**
**Wed., July 12th—French Grand Prix**
**Sun., July 23rd—Belgian Grand Prix.**
**Fri., July 28th, to Mon., July 30th—Anglo-Dutch Trial in Holland.**
**Thurs., Aug. 3rd, to Wed., Aug. 9th—International Six Days Trials.**
**Sat., Aug. 5th, and Mon., Aug. 7th—Irish Two-day Open Trial.**
**Mon., Aug. 7th—West S. Wales Centre A.C.U. Open Speed Trials at Pendine.**
**Sat., Aug. 12th—North Wales Centre A.C.U. Open Reliability Trial.**
**Mon., Aug. 21st, to Sat., Aug. 26th—A.C.U. Six Days Trials.**
**Sat., Sept. 23rd—500 Mile Race at Brooklands.**

### SPECIAL PISTON AND VALVES.

(1) Which is preferable for sprint racing—an aluminium alloy or steel piston? (2) If I have two valves made of tungsten steel would I be able to have the stems drilled out, and the head hollowed slightly, or would it cause breakage?—F.V.J.

(1) It is impossible to say which is preferable, some of the best results having been obtained with ordinary cast iron pistons, as well as with those of special metals and design; it does not follow that the mere substitution of a steel or aluminium piston will convert an otherwise ordinary machine into a record breaker. (2) You could no doubt have the heads of any valves suitable for your engine slightly hollowed without fear of breakage, but it is doubtful whether the stems could be drilled with any advantage.

### GEAR RATIOS.

My mount being a W.D. 5-6 h.p. Clyno is geared 5¾ to 1 on top. I want to make this higher for solo work, and would like the top ratio to be about 4¼ to 1. Will you please give me the number of teeth required on the engine-shaft sprocket for that gear.—N.S.

As you do not give the sizes of the sprockets used in the transmission of your machine, we are unable to answer your question, but you can easily calculate the required size of any sprocket in the drive by the formula:

$$\text{Gear Ratio} = \frac{\text{Product of Nos. of teeth on driving sprockets.}}{\text{Product of Nos. of teeth on driven sprockets.}}$$

### SIMPLICITY AND COMFORT—NOT SPEED.

Being anxious to buy a cheap motor cycle, and having had no experience with engines, I am asking for advice. What I want is something quite simple and easily controlled, and more or less foolproof. Twenty miles an hour would be the maximum pace I should ever want, and probably 10-15 m.p.h. would be my usual speed. I am rather old to take to motor cycles (50 years), but think a motor scooter undignified for a man. What I really want is some sort of machine to take me short journeys with a certain amount of comfort. I study the advertisements in your paper regularly, but all manufacturers appear to make speed the most important thing, and what I want is simplicity and comfort, and a fairly silent engine. Speed or high power do not interest me.—W.B.D.

For obvious reasons we cannot specify one make in preference to all others on the market, but you can scarcely go wrong if you choose your mount from any of the old-established and first-class makes of either two-stroke or four-stroke machines between 2¼ and 2¾ h.p., selecting one equipped with two-speed gear, clutch, and kick-starter. Such a machine you would find perfectly easy to control and manipulate, and although most of them are capable of exceeding 30 m.p.h., there is no need to use this speed if you do not require it. For pleasant slow running qualities, yet having ample power in reserve for hill-climbing, we think a 2¾ h.p. four-stroke machine with outside flywheel would suit you best. Before making your final selection, you would be well advised to obtain "Motor Cycles and How to Manage Them," as the chapter therein on selecting a machine will aid you in your choice.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.*

R.R. (Croydon).—532 c.c. Scott standard solo.

J.R. (Milton Bridge).—Ner-a-Car.

R.W.M. (Cirencester).—482 c.c. Scott Squirrel solo and sidecar: jet sizes, plugs, and lubrication.

G.R.H. (Newcastle-on-Tyne).—247 c.c. Velocette: lubrication, speed, value of 15.5 to 1 low gear, plugs.

K.G.S. (Sandbach).—349 c.c. A.J.S. semi-sports.

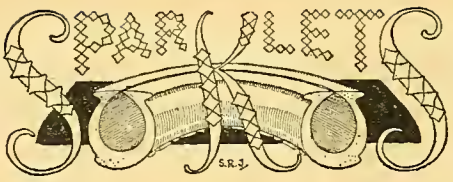
TWO-STROKE (Kettering). — 350 c.c. Beardmore: petrol and oil consumption, plugs, suitability for sidecar.

C.F.B. (Cambridge).—B. and S.-engined machine: suitability for sidecar; also 348 c.c. and 550 c.c. Hawker-Blackburne.

G.C.H. (Peshawar).—532 c.c. Scott sidecar: also use of oversize tyres.

T.H.R. (Lewisham).—Any rear springing attachment for 500 c.c. machine.

F.C. (Northampton).—293 c.c. Connaught: alternative carburetters.



### An Echo of the London-Land's End Trial.

On further consideration the M.C.C. Committee has allowed G. Baxter (678 Martinsyde) to be transferred to the gold medal class.

### A Price Correction.

In our issue of April 27th, on p. 554 it was stated that the new Sports Coventry Eagle was offered at £67, but it was not clear that this price referred to the chain-cum-belt model only; the all chain drive machine which was illustrated costs £80.

### Douglas Prices Reduced.

The new prices of Douglas machines, in every case fully equipped, are as follows: 2¾ h.p. two-speed, £68; 2¾ h.p. three-speed, £82; 3½ h.p. Sports, £115; 4 h.p. solo, £110; 4 h.p. sidecar, £125; and 6 h.p. high-efficiency sidecar, £165.

### A Reference Map.

We have received a copy of the Zone and Population Map of the British Isles, a most useful print for reference purposes in any office. At 1s. 3d. each, which covers price of cylinder and packing, copies may be obtained from the Dorland Advertising Agency, 16, Regent Street, S.W.1.

### Tyres on the Race Track.

In the Brooklands T.T. Races on Saturday, May 6th, the winner of the Junior Race, 250 c.c. Class, J. V. Prestwich (New Imperial), and W. Handley (O.K. Junior), who gained the third place, both used Dunlop tyres. In the Senior Race, 500 c.c. Class, the same make of tyre was fitted by F. B. Halford (2nd place, Triumph) and F. G. Edmond (3rd, also on a Triumph).

### Paints and Preparations.

For motor cyclists who overhaul their own machines, Quickways, of 30, City Road, London, E.C.1, have a number of preparations, among which may be mentioned Unit lacquers, which can be used for freshening up the red glass of tail lamps. Another compound is Argentum, which deposits silver when rubbed on to a clean metallic surface. We have tried this, with considerable success.

### Found on the Road.

A parcel dropped from a Douglas on the Farningham Road, by Swanley, on May 7th, may be recovered on application to "The Cottage," Warren Road, Bexley Heath.

Fishing tackle found at Ferrybridge, Yorks., is in the care of Mr. R. Woodward, Low Street, South Milford, Yorks.

A pair of gold rimless glasses, believed to have been dropped from a sidecar on April 30th, is reported by Mr. J. W. Grant, Milgate Park, Bearsted, Maidstone.

### British Excellence Recognised Overseas.

At the Malaya-Borneo exhibition Zenith Motors, Ltd., were awarded a first-class diploma for their exhibit.

### New Tyre for Motor Cycles.

A "cable" tyre is being placed on the motor cycle market by D. Moseley & Sons, Ltd., of Ardwick, Manchester.

### Business Enterprise.

In their endeavour to put forward the attractions of British-made motor cycles, Douglas Motors, Ltd., have been enterprising enough to have their 1922 catalogue printed in a number of foreign languages. So far, the catalogue has been issued in French, Italian, Dutch, Norwegian, and Swedish, while a special edition has been got out for the overseas dominions.

### For Brooklands Visitors.

An attractive little publication has been issued by the Brooklands authorities, in which the attractions of the car and motor cycle racing on the track are clearly set forth. There is a map of roads leading to Brooklands, particulars regarding catering, and the attractions of Brooklands as a week-end resort. A plan of the track and a fixture list for 1922 are included in the booklet, which is tastefully illustrated by photographs which have appeared in *The Autocar* and *The Motor Cycle*. It may be obtained from the Brooklands Automobile Racing Club, 83, Pall Mall, London, S.W.1.

### Catalogues Received.

Robert W. Coan, 219, Goswell Road, London, E.C.1: A new booklet issued by the pioneers of cast aluminium number plates.

Humphries & Dawes, Ltd., Hall Green Works, Birmingham: A folder giving details of the 348 c.c. O.K. Junior with Blackburne engine.

W. H. Brookes Bros., Edith Road, Smethwick, Birmingham: Motor Houses; catalogue giving details of motor cycle houses of all sizes and types.

The Service Co., Ltd., 289, High Holborn, London, W.C.: In addition to possessing all the qualities desirable in a good catalogue the Service publication goes a good deal farther, as it contains numerous hints and tips.

### Additions to the Editor's Bookshelf.

THE MICROSCOPE, by Chas. E. Heath, F.R.M.S. (Percival Marshall and Co. 1s. 6d.)

C.T.C. HANDBOOK AND GUIDE. (Cyclists' Touring Club, 280, Euston Road, N.W.1.)

PRACTICAL ENGRAVING ON METAL. (Percival Marshall and Co. 1s. 6d.)

THE SIMPLEX MOTOR CAR REGISTER, by Col. Stanley Barry, C.M.G., C.B.E., D.S.O., M.V.O. (Sifton, Praed and Co. Ltd. 3s. 6d.)

FIXTURE LIST OF AGRICULTURAL SHOWS. ("Agricultural Gazette," Dorset House, Tudor Street, E.C.4.)

SUMMONS HEADINGS FOR POLICEMEN. (Police Review Publishing Co. 8d.)

ELECTRICAL MEASURING INSTRUMENTS, by H. G. Yarrill. (Percival Marshall and Co. 2s. 6d.)

# T.T. Notes and News

## Riders and Machines Already Testing their Capabilities on the Course.

IN the cold dawn of Monday this week the first practising for the T.T. Races commenced. All the entrants were not represented, but morning by morning the number is growing.

* * * *

The Unity Motor and Engineering Works, 7, Oldham Street, Liverpool (situated off Renshaw Street, by St. Luke's Church, and half a minute from the Adelphi Hotel), offers facilities to the stranger in Liverpool. The garage is open from 8 a.m. to 10 p.m. Motor cycles are stored for 1s. a night, and side-car outfits 1s. 6d. a night.

* * * *

Few provincial cities can claim such a continuous representation each year in the Isle of Man as Bristol. Douglas machines have always figured in the races, E. Kickham was second in 1912, and with S. L. Bailey ran each year in the earlier contests. F. G. Ball, another Douglas Bristolian, was also a competitor in those days; Philip Grout, then the secretary of the Bristol club, was Chief Marshal in the island in 1913. Last year the two brothers, F. and H. Thorpe, were in the Douglas team. This year's event has brought forward two new men from the western city, G. H. Tucker, of the Norton team, and one of his staff, V. Anstice, who is to ride a Douglas.

* * * *

At least two Bristol clubmen, private owners, were making preparations to ride in the Amateur Race, had it been arranged.

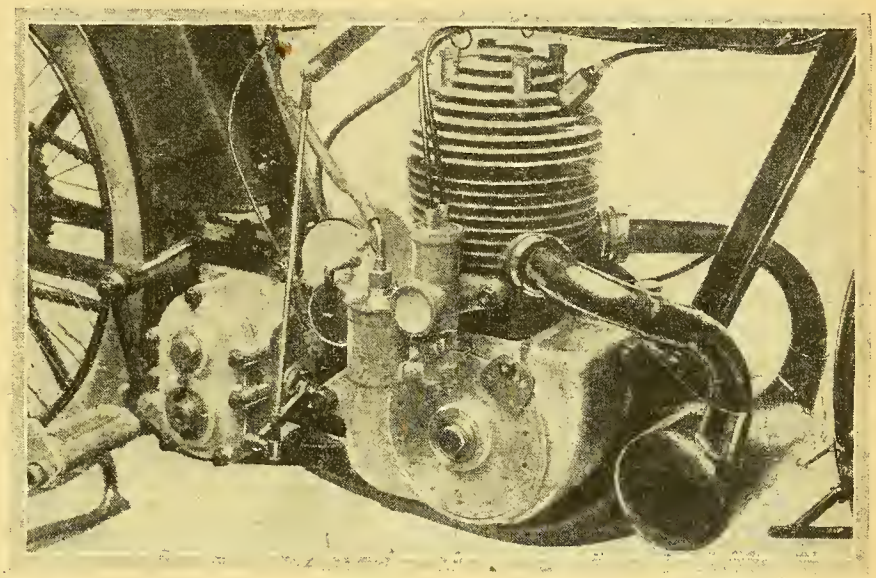
* * * *

As their headquarters, New Imperial Cycles, Ltd., have chosen the Nursery Hotel, Onchan, two miles from Douglas. The company has taken the whole hotel, has a private garage, and a private entrance to the course. The racing colour is Imperial green.

Norman Norris will again be riding the 348 c.c. Ivy entered by Maudes' Motor Mart in the T.T. Races. He rode for the same firm last year, and also made a splendid performance on the same machine in the 500 mile race at Brooklands, winning his class.

Aluminium is in great and greater demand in engine construction, especially as the material for cylinder heads; it is so used on the new T.T. Ivy. Six bolts hold the head on to the cylinder barrel.

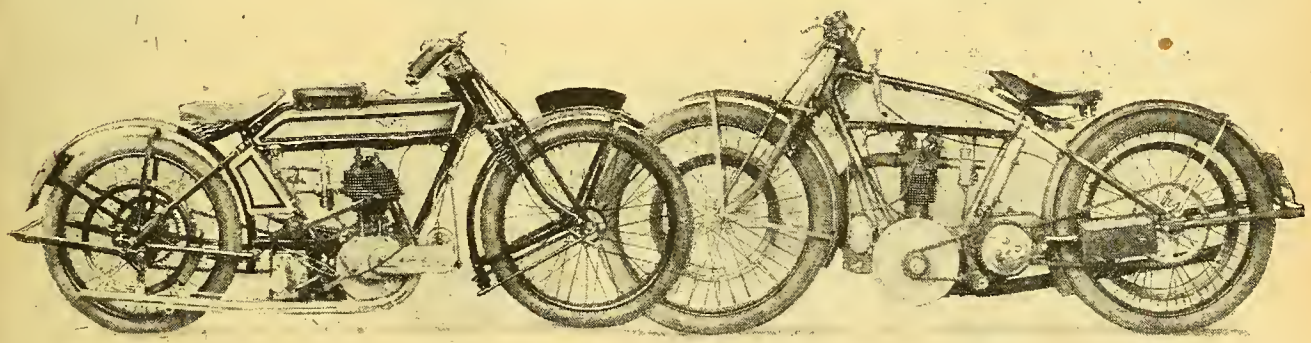
Roller main bearings are a new feature, but the big end is plain.



The T.T. Velocette power unit which has a bore and stroke of 63 and 80 mm. respectively (249 c.c.).— The silencer shown may replace the "T.T." straight-through exhaust pipes.

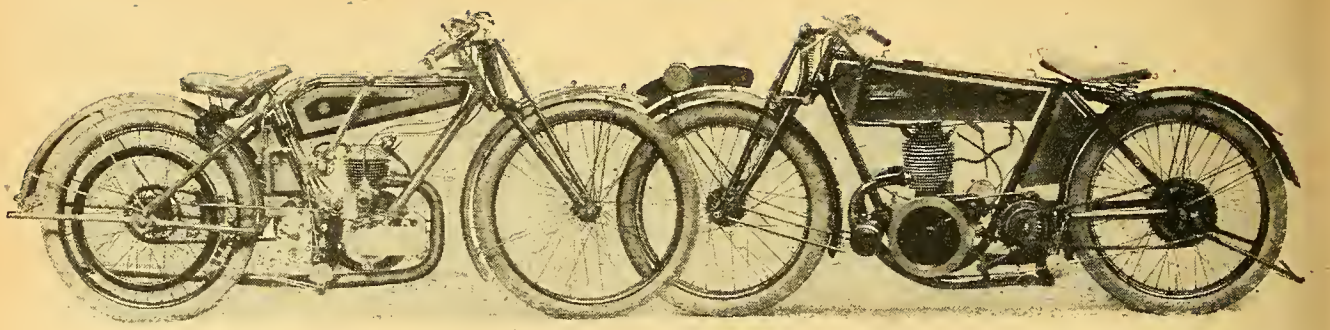
All-chain drive is fitted on the Ivy, two machines having Moss foot-controlled gears, an improvement on those used experimentally last year, and two carrying Sturmey-Archer boxes. The ratios in each case are approximately 4¼, 5, and 7 to 1. The frame is of standard design.

Special oiling arrangements are a feature of the O.K.-Junior machines for the T.T. A separate oil pump is carried on the saddle tube, and from this there is an adjustable drip feed to the front chain. Both hand and foot pumps supply the engine.



A T.T. Norton with side-by-side valve engine; a separate oil tank and an expanding front hub brake are fitted.

An O.K. fitted with an o.h.v. 248 c.c. Blackburne engine and Burman 3-speed gear.



One of the Ivy T.T models with aluminum cylinder head. The oil pump is operated by Bowden wire and lever from the handle bar.

The frame of the T.T. Velocette has been lengthened by 1½in., enabling a lower engine position to be adopted.

# T.T. MEMORANDA.

## PRACTISING.

NO practising is permitted after 7 a.m., or on Sundays.

## THE COURSE.

Douglas, Bray Hill, Quarter Bridge, Union Mills, Crosby, Ballacraine, Ballig, Kirkmichael, Ballaugh, Sulby, Ramsey, Snaefell, Keppell Gate, Hillberry, Cronk-ny-Mona, Governor's Bridge, Douglas. (37¾ MILES.)

## NUMBER OF CIRCUITS.

Lightweights (250 c.c.), 5 laps. Total, 188 m. 6 fur.

Junior (350 c.c.), 5 laps. Total, 188 m. 6 fur.

Senior (500 c.c.), 6 laps. Total, 226 m. 4 fur.

## LAST YEAR'S SPEEDS.

Winner of *The Motor Cycle* Cup (250 c.c. Class), D. G. Prentice (New Imperial) averaged 44.9 m.p.h.

Junior Trophy was won by Eric Williams (349 A.J.S.) at an average speed of 52 m.p.h.

Senior Race winner, H. R. Davies (349 A.J.S.) averaged 54.49 m.p.h.

## FASTEST LAPS, 1921.

Lightweights.—D. G. Prentice (249 New Imperial), 49 min. 21 sec. (2nd lap).

Junior.—H. R. Davies (349 A.J.S.), 41 min. 4 sec. (5th lap).

Senior.—F. G. Edmond (499 Triumph), 40 min. 8 sec.* (4th lap).

* Record for the course.

## Time and Speed Table for the T.T. Course.

*Time per lap at speeds from 40 to 60 m.p.h.*

| | | | | | | | |

The experimental overhead valve Norton, which may be used as well as the side valve model in the Senior T.T. race.

Most noticeable in the O.K. plans for the T.T. is the fitting of a 248 c.c. Blackburne engine; four-stroke engines have not previously been fitted on any of the O.K. productions since the war.

* * *

Other details on the O.K. are the Burman gear box, with three ratios of 6, 8, and 11 to 1, and internal V belt drum brakes on both wheels. In the steering head ¼in. balls are being used, the tyres are 26×2¼in. Dunlops, and the front wheel is carried in a Druid fork. Either Amac or Atmos carburetters will be employed.

* * *

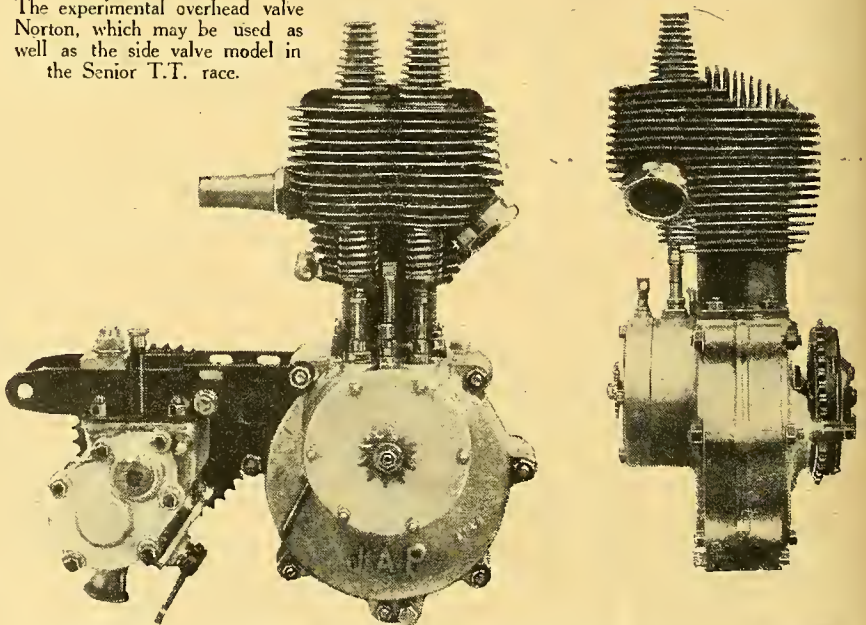
Oil tanks on the saddle tube are to be used on the Ivy. This location for the lubricant container grows in popularity. On this make the oil pump is worked by lever and wire from the handle-bar.

* * *

The Atholl Motor Garage are making arrangements to meet all boats arriving at Douglas with petrol for Rudge riders.

* * *

J.A.P. headquarters will be at the Atholl Garage, Douglas.



A typical example of the standard 349 c.c. J.A.P. engine for the T.T. races. The end view clearly shows the generous amount of radiating surface and the 1½ in. diameter exhaust port, the same size as that of the 998 c.c. engine.

## T.T. Notes and News.—

In the official list of entries the Ivy team now consists of G. N. Norris, T. A. Joues, and P. Newman.

* * * *

The 2¾ h.p. H.B., entered by its manufacturers, Hill Bros., of Wolverhampton, is to be ridden by R. S. Hill.

* * * *

Those in need of repairs to or spare parts for Sturmey-Archer gears will find the manufacturers' expert at the Modwena Hotel, Loch Promenade, Douglas.

* * * *

The interests of users of Blackburne engines, Burman gear boxes, and Vici carburetters will be looked after in the I.O.M. by Mr. S. W. Cole, O.B.E., whose headquarters will be at the Villiers Hotel, Douglas.

* * * *

Reference was made in our issue of May 4th to the mechanical pump fitted to New Imperial machines. We are requested to state that this interesting device is fully patented

* * * *

All Rudge riders visiting the island are invited to call upon Rudge-Whitworth, Ltd., at their headquarters, Homefield, 77, Palace Terrace, Queen's Promenade, Douglas. Every visitor will receive a Rudge souveuir.

* * * *

In outward appearance the 3½ h.p. T.T. Beardmore-Precision differs but slightly from the bigger standard model. Actually, however, the bore and stroke of the T.T. engine is 81 × 96, and a close ratio gear box is incorporated in the engine unit. A detachable cylinder head is retained, and the shape of this head has been a matter for careful research. An unusual feature lies in the arrangement of the carburetter and inlet pipe, for in order to obtain an easier sweep for the gas, the pipe and carburetter body are inclined, though a float chamber is, of course, arranged vertically. At the present moment no decision has been made as to whether Cox or Amac carburetters will be used.

* * *

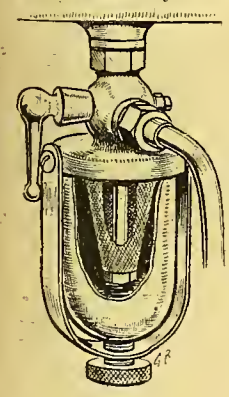
Steel lugs are standard on the Beardmore, but in order to make the machine more handy for the T.T. the wheelbase has been shortened to 52in., and the whole frame has been slightly lowered. This has necessitated a slight bend in the saddle tube; the saddle itself is of special construction, and is attached to the steel tank by a short leaf spring, the rear saddle springs being attached to the frame by a special clip. As usual, band brakes are used on both wheels, but the rear brake is operated from pedals on either side of the machine.

* * *

For racing purposes it has been found that the full motion of the Beardmore front springing is unnecessary, and consequently the vertical part of the leaf spring has been replaced by a light steel box girder. The engine has a compression ratio of approximately 5 to 1, and it is probable that a larger oil sump will be employed, carrying approximately 6 pints of oil, which should be more than sufficient for the full course. In addition to this the petrol tank is enlarged by suitable extensions until its capacity is something over 2½ gallons, 650 × 65 mm. tyres will be used, and but for the fact that stand, mudguards, stays, etc., are somewhat lighter than usual, the rest of the Beardmore-Precision remains much as usual. The mechanical lubrication system, which is a feature of the touring model is, of course, retained. The use of standard parts is a special feature of this machine, since it is the intention of the firm to turn out a high-speed machine suitable for sale to the general public.

* * *

Motor cyclists taking their machines to the Island should apply for temporary licences to the purser on the steamer when embarking at Liverpool. The Highway Board inspector will meet passenger steamers on arrival at Douglas, and if the application forms are properly filled up and the fees for registration and drivers' licence (2s. 6d. and 1s. respectively) are ready, very little delay will ensue. Motor cyclists are requested

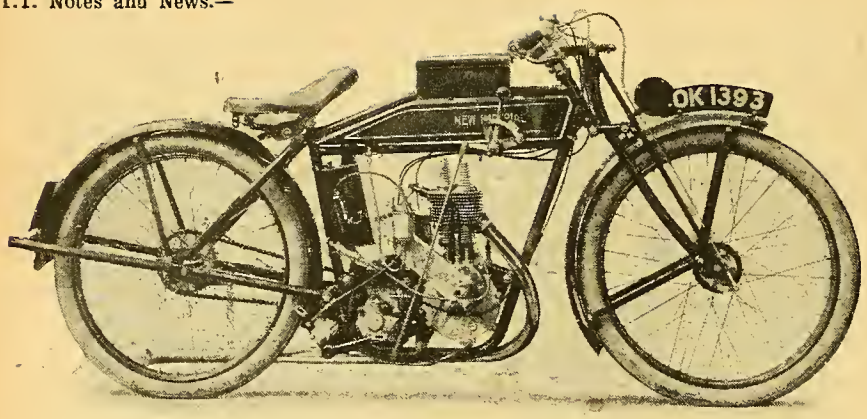


Detachable in the same way as several acetylene generators, a large petrol filter is fitted to the T.T. Beardmore-Precision.

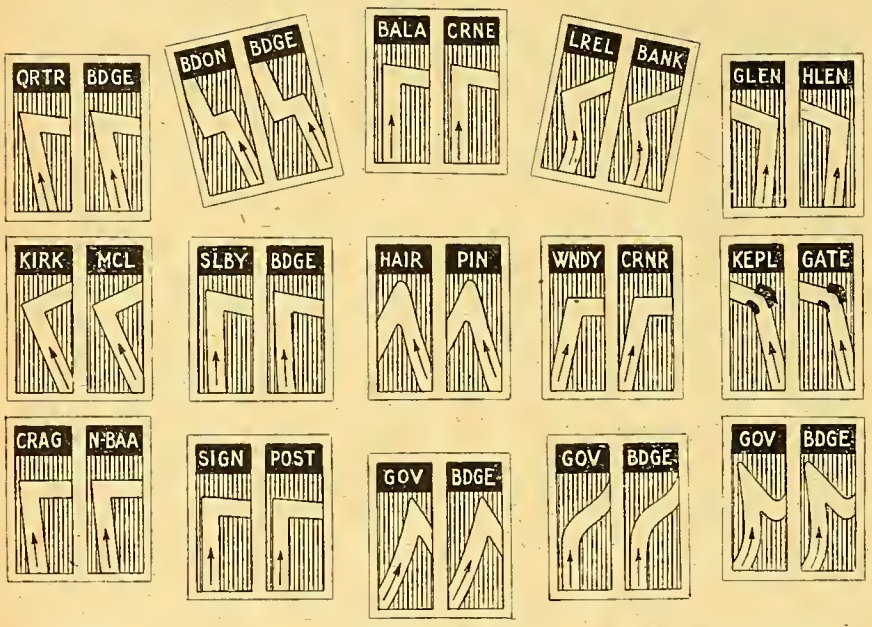
## IMPROVING THE T.T. COURSE

At various parts of the T.T. course, the Isle of Man authorities are carrying out improvements which will not only increase the safety margin for the competitors but will tend to raise the possible speeds. It will be seen that Windy Corner, once a most deceptive danger point, is practically eliminated; the width of the road at Keppel Gate is increased 100%; and Sign Post Corner is greatly improved.

**T.T. Notes and News.—**



A business-like mount is the T.T. New Imperial with which its makers hope to win the lightweight event again.



Large warning signs which are placed on both sides of the road at all dangerous parts of the course. The abbreviations indicate the location and the diagrams the nature of the bend.

to tender the exact fees. Machines will not be disembarked unless the forms are filled up and the fees paid. The certificate must be carried in the licence-holder, but to enable motorists to get to their destination on arrival it should be placed in the lamp or in some other conspicuous place.

* * * *

The identical Indian machines used in last year's T.T. Race will compete again this year. The Indian headquarters will be at the Queen's Hotel, Queen's Promenade, Douglas, with E. A. Bridgman in charge.

* * * *

The Coulson T.T. machines are already on the road, and have so far undergone their preliminary tests satisfactorily. It has been decided that Showell mechanical oil pumps shall be used with an auxiliary foot pump in case of emergencies. Druid forks, Webb internal-expanding brakes front and rear, M-L magneto, Hutchinson tyres, and Burman gears are features of the Coulson racing machines. The saddle position is peculiarly low, being only 25in. above ground level. Only slight modifications to the spring frame have been found necessary to suit chain drive, which is now used for the first time on this make. The new Coulson has been laid out by Mr. L. Nicholson.

* * * *

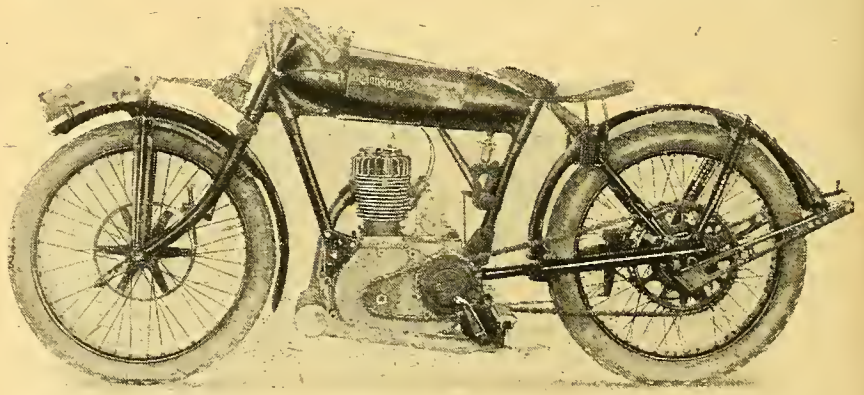
In general appearance the engine of the 3½ h.p. T.T. New Hudson closely resembles that of the well-known sidecar machine, though the bore and stroke of the smaller engine are 79.5×100 mm. respectively. Internally also very little change has been made, but a roller bearing big end is employed, and the main shafts run in ball bearings. In addition to this, two concentric springs are used for each valve, and the sparking plug lies behind the inlet pipe, ribbed valve caps being fitted over both inlet and exhaust valves.

* * * *

On the racing New Hudson a modified type of aluminium piston gives a compression ratio of approximately 5 to 1 and an external exhaust lift is fitted in place of the usual decompressor; 3in. filter caps are fitted to the two-gallon petrol tank, and a handle-bar controlled pump sucks oil from a half-gallon tank. The drive is through a close ratio Sturmey-Archer gear box, a shock absorber being fitted to the crankshaft. It has not yet been decided whether 650×65 mm. or 700×80 mm. tyres will be used. The carburetter is a B. and B., and both brakes are of the internal expanding type.

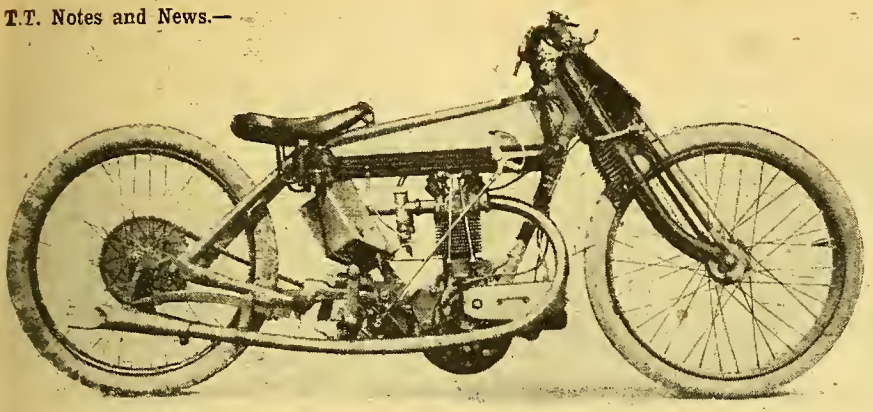
* * * *

The little standard New Hudson which was entered in last year's T.T. distinguished itself. This year some slight modifications have been made to the engine; the bore and stroke of which will be 63×80 mm. A roller bearing big end and a ball bearing crankshaft will be employed, and a copiously drilled flywheel lies between the crankcase and the primary chain drive. A three-speed Sturmey-Archer gear box, handle-bar controlled oil pump, and 24×2¼in. tyres, form part of its equipment. The petrol tank is designed to carry 1½ gallons of



A slightly smaller edition of the sidecar Beardmore Precision, the T.T. Model is an "all steel" production, as might be expected from the first half of its name.

**T.T. Notes and News.—**



Although the well-known Coulson rear springing is retained in the T.T. model of this make, there are several modifications in other details.

petrol and half a gallon of oil. Transmission is by chain throughout.

* * * *

At first sight one is struck with the enormous size of the A.J.S. exhaust pipe, which has an internal diameter of 1⅝in. On account of the small and compact design of the motor cycle, the diameter of the exhaust pipe appears even greater than is actually the case. Broadly speaking, there is not very much change from last year's T.T. machine, though a new cylinder head has been designed with modified rocker gear, and the size and design of the cams are very striking. From centre to tip the cam is, to all intents and purposes, equal to the radius of the gear wheels, and each cam is carried on a pair of ball bearings. Further than this, a single row roller bearing big end replaces last year's double row type. Steel flywheels are retained, and either last year's steel piston or an aluminium piston with four narrow rings will be used.

* * * *

The compression of the A.J.S. is slightly higher than in last year's machines, which won both Junior and Senior events, being 5.7 to 1, and a slightly larger exhaust valve is now fitted. Another alteration lies in the use of 650 × 65 mm. tyres. As before, the head is detachable and is held on by a steel strap. The valve rockers are provided with return springs.

* * * *

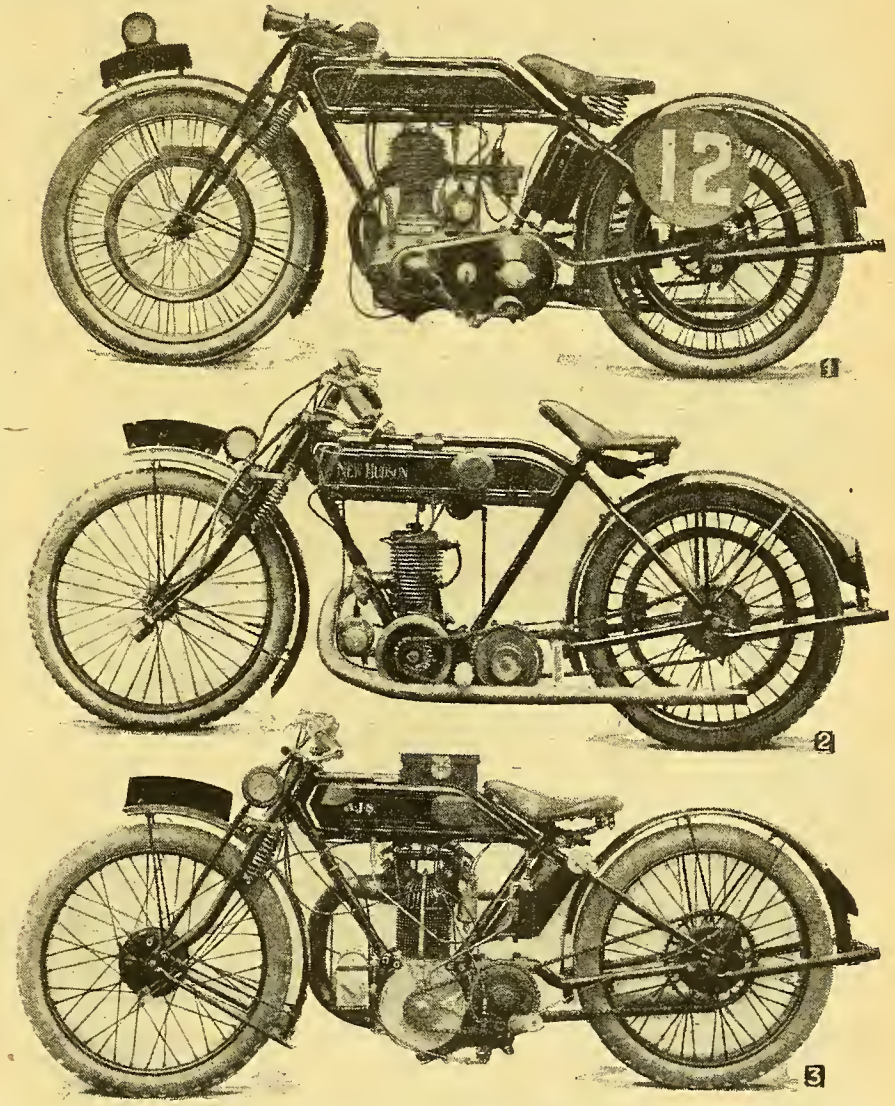
A slightly lower saddle position has been obtained for the A.J.S. riders, and one of the most unusual features of this Wolverhampton production is the fact that both front and rear internal expanding brakes are interconnected and will be applied by the same pedal. In addition to this a hand control is fitted to the front brake. An oil tank is carried behind the saddle tube, and a foot oiler employed. The three-speed gear box provides ratios of 4.93 to 1, 6.05 to 1, and 9.26 to 1. The specification includes Amac carburetter and Lucas magneto.

* * * *

There is strikingly little alteration from the standard sporting Sunbeam to be seen in the machines which will race on the first of next month. The 77 × 105.5 mm. engine remains to all intents and purposes unchanged, though it is possible that a modified slipper type piston may be used. This piston will have but a single ring, as is usual in Sports Sunbeam practice. The most visible alteration lies in the ¾-gallon oil tank fitted behind the saddle tube; the main tank capacity is thus considerably increased and now holds the full two gallons.

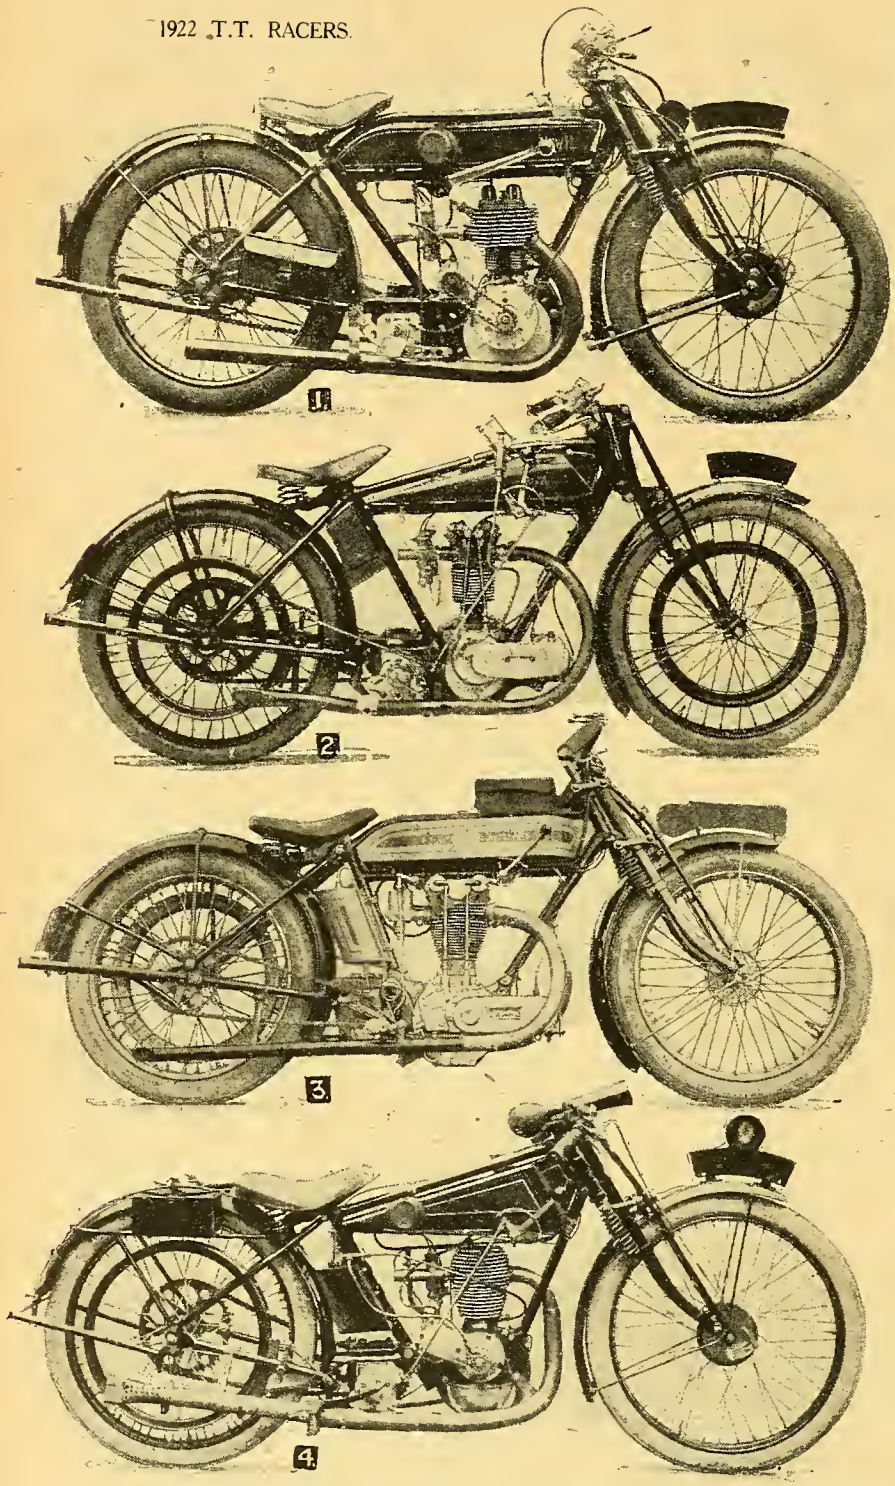
* * * *

Sunbeam motor cycles will be fitted with mechanical lubrication, thus adding the weight of their reputation to a steadily growing feature, and the Showell pump has been decided upon; a foot-operated pump is supplied for emergencies. Either 26 × 2⅜in. or 26 × 2½in. tyres will be fitted, and the close ratio gear box will provide gears in the neighbourhood of 4.3 to 1, 5.9 to 1, and 8.2 to 1. Brakes are of the internal V type on both wheels, as is usual in Sunbeam motor-cycles, but the rear brake may be operated by a pedal on either side of the machine.



1. With the exception of an auxiliary oil tank and mechanical lubrication, the standard long stroke Sunbeam remains unchanged for the T.T. race. 2. A long stroke engine (68 × 80 mm.) and a primary drive "outside" the flywheel are features of the T.T. two-stroke New Hudson. 3. Interconnected front and rear brakes are used in the latest A.J.S.

1922 T.T. RACERS.



1. A new-comer to the Senior race, the New Hudson is a serviceable-looking mount. Note the deep radiating fins and large Dunlop cord tyres.
2. An o.h.v. Blackburne engine, Burman gear, internal V brakes, and unusual top tube design are noticeable items on the 250 c.c. T.T. Rex.
3. Another view of the T.T. Triumph, already illustrated in "The Motor Cycle," showing, in this case, the lubrication system and the external band brake on the front wheel.
4. Engined with a standard Barr & Stroud unit, the Diamond for the Junior event is to all intents and purposes the same as the marketed sports model.

Details of the Triumph machines for the Island have already been published exclusively in *The Motor Cycle*, but hitherto it has not been possible to describe the lubrication system. This is of the dry sump type. A double piston oscillating pump of simple design is driven off the inlet half time wheel, forcing oil from a separate tank on the saddle tube through a series of ducts and washers into the drilled crankshaft. Thence the lubricant is conveyed under pressure to the big-end, the surplus being splashed on the cylinder walls, etc. As soon as it drains to the bottom of the crank case it is sucked out through a hollow crank case bolt by the same pump and returned to the top of the oil tank.

* * *

The only filter in the system is in the bottom of the tank, but in practice the oil remains cool and clean throughout, and the actual consumption is extraordinarily low. The tank holds just over two quarts, which will suffice for well over 1,000 miles. An indicator bar tells whether the pump is working or not. An auxiliary hand pump is regarded as unnecessary.

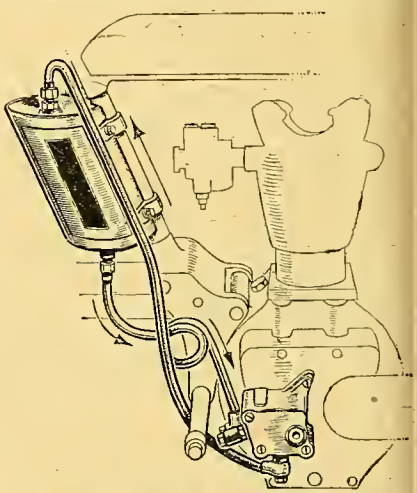
* * *

Between $\frac{1}{4}$ in. and $\frac{5}{8}$ in. flywheel clearance is allowed, almost entirely eliminating any loss of power due to oil-drag. Incidentally, of course, the return pump relieves crank case pressure and withdraws any floating gas or fumes which may be there; this may be proved by removing the oil-tank filler cap after the engine has been running.

In our illustrations ordinary oil-piping is shown, but this will be eventually replaced with Petroflex or some similar flexible tubing.

* * * *

Though it has been impossible to push through the special racing Barr & Stroud engine intended for use in the Tourist Trophy, the makers of the Diamond motor cycle have decided to run a standard Barr & Stroud engine in the Junior race. So as to be in keeping with the engine, the rest of the machine also



Simplicity is not lost in the new Triumph system of dry-pump lubrication to be used on the racing mounts.

**T.T. Notes and News.—**

...ill be standard except for detail modifi...ations. Even the pannier two bags and ...arrier normally nsed on the sports Dia...ond will be retained. Alterations con...ist of a petrol pipe draining the tank ...rom both front and rear, an auxiliary oil ...ank behind the saddle tube, foot-rests ...laced somewhat further rearward, and a ...lose ratio Burman gear box with ratios ...pproximately $4\frac{3}{4}$, $5\frac{1}{2}$, and $7\frac{1}{2}$ to 1.

* * * *

Webb front brake and direct action, in...ernal V rear brake with two operating ...edals, 26×2½ in. tyres, and Best mechan...al lubrication are employed on the Dia...ond. The petrol tank has a capacity of ...ust over 2 gallons, and half a gallon of ...il is carried.

* * * *

For the lightweight race a smaller Dia...ond will be run, fitted with 64.5 × 6 mm. side-by-side valve J.A.P. engine. ...gain, Best mechanical lubrication will be ...itted, and also a close ratio Burman ...ngine box. Tyres are 26 × 2¼in. an Amac ...arburetter is fitted, and the brakes are ...imilar to those on the larger model. This ...ittle machine, with its sloping top tube ...nd low saddle position, is a very neat ...iece of work, and so as to avoid difficult ...ipe bends a large aluminium casting ...eads the exhaust gases from the cylinder ...o a comparatively straight tail pipe.

* * *

Those who go to the start to witness ...ractising should keep clear of the ...oadway between Bray Hill and Gover...ior's Bridge. The grand stand will be ...vailable during practice.

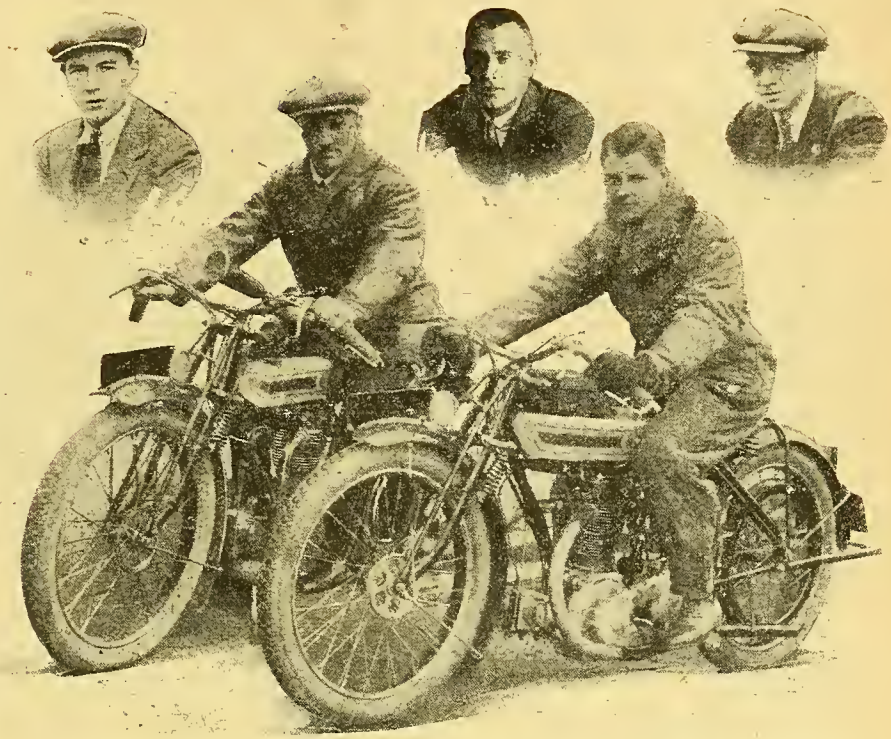
## COMMENCEMENT OF PRACTICE.

...N fine weather, with strong south-west wind, practising started on Monday. Over fifty machines were on the ...ourse, many of which completed two ...ircuits. Fastest time was achieved by ...ugh Mason, a reserve rider of a ...N.U.T., who completed the course in ...4 min. 1 sec. The next fastest circuit ...as made by Duggie Brown, the Manx ...Norton rider, taking 45 min. 12 sec. ...On their second circuits, Norman Black ...(Norton) registered 46 min. 1 sec., ...Davidson (Indian), 50 min. 5 sec., De ...La Hay (Sunbeam), 49 min. 23 sec., ...Greenwood (Sunbeam), 49 min. 36 sec. ...In the lightweight class Padley on a ...Henderson recorded 54 min. 14 sec., and ...n Junior, Horsman (Raleigh), 52 min. ...50 sec., Remington (Edmund), 53 min. ...14 sec.

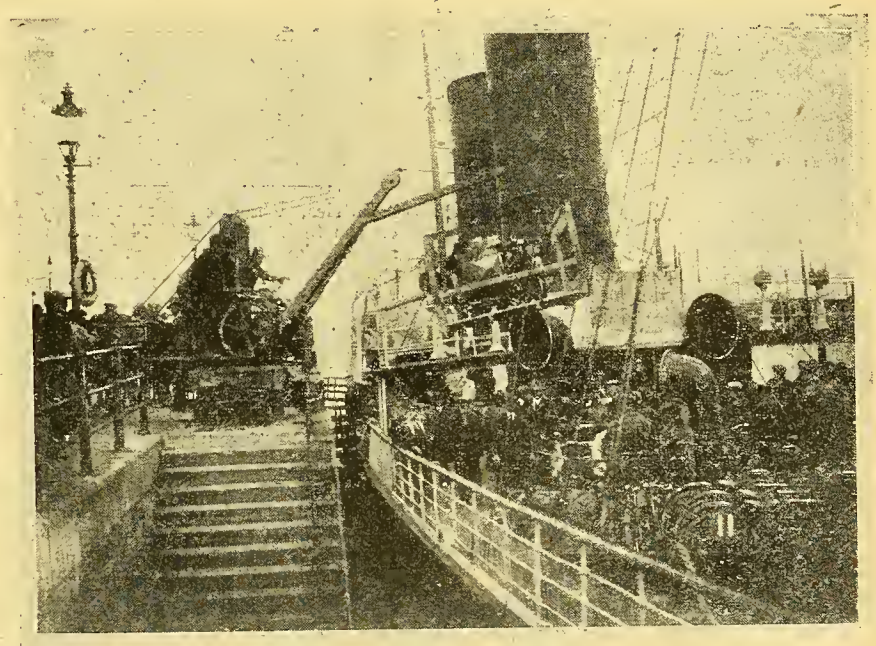
The New Hudsons made a first appear...ance, as also did Sun, Scott-Squirrel, ...and six Rudge machines, all standard, ...some of which completed the circuit in just over 56 min.

The attendance around the course was almost a record. Great enthusiasm was manifested in the forthcoming races. The course on the whole is very good excepting one or two bumpy places which require attention. Some eighty competitors are already on the island.

Sidecar owners were greatly pleased with the small crane on the pier, which avoided the necessity of detaching side...cars during the voyage.



A STRONG TEAM. Triumph riders upon whom many eyes are focussed at the present time. The mounted men are F. G. Edmond and F. B. Halford, both experts with notable performances to their credit. The former made the record lap last year and Halford, until quite recently, held the 500 c.c. hour record. (Above.) W. Brandish jr., whose lap times last year did not vary 10 seconds (he finished 13th), H. R. Harveyson, and G. H. Kirby (reserve).



A CRANE AT LAST! Although the I.O.M. authorities were willing to instal a crane for the convenience of motor cyclists during the T.T. races, the British government refused to sanction the money for its erection. The Manx authorities, however, have overcome the difficulty by erecting a land derrick which is shown raising a sidecar outfit complete.

# A SUCCESSFUL WORKS TRIAL.

## Delightful Afternoon's Sport on B.S.A.s. Seventy-three Starters.

IN order to encourage a spirit of friendly rivalry, the B.S.A. Co. organised a half-day trial for those of their employees who owned B.S.A. machines. Their efforts were rewarded by an entry of 86, and 73 actually faced Mr. Alec Ross, who officiated as starter. Amongst the actual starters were ten solo machines, five 10 h.p. B.S.A. air-cooled light cars, and four Daimler cars, the remainder being sidecar outfits of powers varying from 3½ h.p. to 8 h.p. Commander Herbert, R.N., was mounted on an interesting experimental outfit, which might be described as a "light eight," for it consisted of the 8 h.p. B.S.A. engine in the "light six" frame. In addition, the machine was fully equipped with windshield, legshields, and horizontal metal shields to prevent draughts from rising behind the windshield. At the start B.S.A.s of all ages and descriptions were gathered in an imposing array outside the Small Heath works, and at 2.1 p.m. the first man was despatched to Stratford-on-Avon. The 59 miles course was intentionally an easy one, as many riders had had no previous competition experience. Following the Broadway road the first time check was at Aston-sub-Edge, and this was immediately followed by an acceleration test on the neighbouring hill.

### Good Acceleration.

Some good performances were noticed at this point, particularly by L. L. Sealey (4¼ solo), C. Wykes (4¼ sc.), F. Howard (6 sc.), and Commander Herbert, R.N. (8 sc.). As might be expected, however, in a friendly trial of this description, there was a good deal of bungling and stopping of engines. A right-hand turn after the top of the hill led upwards over slightly loose surface to the top of Weston-sub-Edge Hill, and after descending to the village the route led up Saintsbury through Snowshill to Broadway, up Willersey and down Saintsbury, thence to the finish at Stratford-on-Avon. This loop caused outward-bound competitors passing those on the return journey —not a very satisfactory proceeding on narrow hilly roads. On Saintsbury Hill some of the sidecar outfits performed splendidly, particularly R. H. Cox (4½ sc.), A. Allis (6-7 sc.), J. Leek (6-7 sc.), F. Howard (6 sc.), and F. Thorpe (6-7 sc.). At the bend on this hill F. Walker (4¼ sc.) came too fast on his homeward run, and overshot the road, causing the outfit to turn over with more or less serious damage to both occupant and driver. This was the only incident which occurred to mar a splendid day's outing. The ascent of Willersey Hill caused no serious trouble, and the homeward journey from Stratford was uneventful. Tea was arranged at the Swan's Nest Hotel, and of the 73 starters all but four finished. The B.S.A. Co. are to be congratulated on their enterprise and on the response which was accorded to their efforts.

No less than 73 competitors, all mounted on products of the B.S.A. factory, took part in last Saturday's trial organised in connection with these works. A scene at the start.

## RULES FOR THE 200 MILES SIDECAR RACE.

COMMENDABLY concise and clear regulations are now available for the 200 miles sidecar race to be held on June 17th at Brooklands by the Ealing and District M.C.C.

In effect there will be three separate races—for 350 c.c., 600 c.c., and 1,000 c.c. sidecar outfits—and the starting times will be so arranged that all the runners should finish reasonably near to each other. Each class has its own trophy, the awards being the "Three-fifty," "Six hundred," and "Thousand" Cups; there is also a special gold medal for the first private owner in each category.

Seventy-four laps of the track (201.11 miles) will constitute the race in each case, and the following time allowances have been fixed :—

| | | |
|---|---|---|
| 350 c.c. | ... 6 | hours (=33 m.p.h.) |
| 600 c.c. | ... 5 | hours (=40 m.p.h.) |
| 1,000 c.c. | ... 4½ | hours (=47 m.p.h.) |

Entries, which close at ordinary fees on the 27th inst., cost £4 4s., plus 21s. subscription if not already paid, and should be sent to Mr. J. A. Masters, 22, Norland Square, W.11.

## IN AID OF CHARITY.

AN official sweepstake on behalf of the Manx hospitals is being run in connection with the T.T. races. As there are three separate races there will be three first, three second, and three third prizes. The value is £500 first, £200 second, and £100 third, while there will be a prize of £5 to each holder of a ticket drawing any competitor other than first, second, or third, in any one race who finishes within half an hour of the winner. The sweepstake will be drawn at the Fort Anne Hotel, Douglas, at 3 p.m. on Monday, May 29th. Tickets (5s.) are only available to members of the A.C.U. or of clubs affiliated to it. These may be obtained from the A.C.U. headquarters, the Peveril Hotel, Douglas, Isle of Man.

## IMPORTS AND EXPORTS.

THE value of imported motor cycles and accessories was £8,580 for the month of April, a low figure compared with the corresponding month in 1920 and 1921, when the figures were £46,703 and £18,440 respectively.

MARCH IMPORTS.

| | 1920. | 1921. | 1922. |
|---|---|---|---|
| Value of motor cycles | £34,370 | £5,836 | £3,492 |
| Value of parts and accessories ... ... | £12,333 | £12,604 | £5,088 |
| | £46,703 | £18,440 | £8,580 |

Motor cycles and accessories to the value of £84,648 were exported last month, a slightly higher figure than is the average for the four months of this year.

MARCH EXPORTS.

| | 1920. | 1921. | 1922. |
|---|---|---|---|
| Value of motor cycles | £85,350 | £92,923 | £61,326 |
| Value of parts and accessories ... ... | £40,618 | £26,785 | £23,322 |
| | £125,968 | £119,708 | £84,648 |

# JOY RIDING IN THE LAKE COUNTRY.

## Cumberland County M.C.C. Open Trial. Successful One-Day Event.

IF the open event held last Saturday on behalf of the Northern Centre (A.C.U.) by the Cumberland County M.C.C. can be criticised in any way, it is only to complain that so much gorgeous scenery should be scampered through at such a headlong pace.

The weather was fine throughout—traces of mist immediately before lunch being almost unnoticed—and because the climatic conditions were so delightful, the scenery, glistening lakes, fresh spring green on the trees, and snow-capped tops made all the more demand for attention; indeed, we suggest that next year the Alan Trophy shall be awarded the writer of the best descriptive essay on the beauties of the route, providing he has qualified for this eliminating test by completing the course at 12 m.p.h.!

But to deal seriously with the matter in hand. All but four of the 54 entrants started out from Carlisle, the first man leading off at 9 o'clock.

### Easy Going.

For the first twenty miles, although the rather loose stony Catlands hill was observed, the conditions gave the key to what was to follow the greater part of the day; the roads were dry, the surfaces good or middling, seldom downright bad.

Next came Bassenthwaite village and another minor observed hill, then fifteen more easy miles into the Newlands valley. Newlands Hawse, the pass leading to Buttermere, is a long, trying climb, rather loose as to surface in places. It commences with a wicked double hairpin termed the Devil's Elbow, and the two miles from this point to the summit had to be climbed non-stop.

D. W. Rhodes (Scott Sociable) at the Devil's Elbow, Newlands Hawse.

Almost every competitor succeeded in doing this, although on the Elbow R. Pape (348 Wilkin) steadied with his foot, H. E. Banks (482 Scott) was a little hesitant, and A. Greenwood (976 Brough Superior) attempted too great speed and side slipped on the upper hairpin.

On the higher slopes and at the summit it was almost impossible to distinguish between the performances. Pape again wobbled and almost came off, but the rest were able to play with the gradient.

Exceptionally good climbs were made by J. A. Newman (496 Douglas), B. Kershaw (248 New Imperial)—wonderfully speedy for his engine capacity—P. L. Mayo (248 Coventry Eagle), A. D. Reid (499 P. & M.), W. Westwood (499 Triumph), and S. Bell (348 Beardmore B. & S.).

Passenger machines were equally good, and on the Devil's Elbow only D. W. Rhodes (578 Scott Sociable) showed any signs of lack of power; whether it was necessary for himself and passenger to concentrate weight on the back wheel is known only to himself.

Both the other three-wheeler entrants—F. S. Spouse (T.B.), and J. J. A. Dias (Morgan), came up the hill with power in hand—but the star climb was undoubtedly made by Duncan Bell, whose 348 c.c. A.J.S. sidecar simply romped up the hill.

A. Greenwood (Brough-Superior) leading G. Hill (Triumph) and L. Dixon (Norton) up Kirkstone Pass.

### Northwards Again.

From Buttermere a detour northwards was made, working in another observed hill, Moser Fell, before turning south to Keswick. From the latter place the line of the main road, *via* Thirlmere, to Ambleside, was followed, but a deviation to take in Rak[illegible] How, a double-hairpin

Red Bank hill was not so difficult as this picture, of B. Bourke (New Hudson sidecar) approaching the worst bend, would make it appear.

grassy climb, was made, which brought the competitors out by Thirlspot. Spouse (T.B.) provided great excitement on Rake How by overturning.

Before running into Dungeon Ghyll (Langdale Valley), for lunch, Red Bank had to be climbed. The surface was excellent, and the majority roared up the once dreaded 1 in 4 at high speed.

Here the ascents of J. H. Walker (557 B.S.A.) and B. L. Bird (557 B.S.A.) called for special comment; the manner in which these two riders handled their by no means lightweight mounts could only be described as masterly. The riding of their team mate, H. S. Perrey, was only slightly less commendable. W. R. Haggas (499 Triumph) also showed how well he can ride; D. Wright and H. Jackson (Sunbeams) came up fast in close company, while the Matchless sidecar team, Ellis, Ross, and O'Brien, brought their machines up at comfortable touring speeds.

### A Strenuous Hour.

Up to the lunch control 20 m.p.h. was the speed that had to be maintained, but for the first sixteen miles after the stop one hour was allowed—it was needed! From Elterwater Village, Little Langdale was entered, and from Colwith Bridge to Oxenfell was a confused medley of ups and downs, right and left hairpins, reefs and outcrops of rock, farmyards and grass. Observations were out of the question, the road was so narrow that a stop was impossible—a stationary machine would have stopped the trial.

Tilberthwaite Hill is a curiosity; the riders enter one gate in a farmyard, turn in the yard itself, and attack the hill through another gate beside the one through which they have passed.

### Had it Rained——!

Had the weather been wet Tilberthwaite would have been the Waterloo of many; as it was it was fairly easy. Dungeon Ghyll was reached again via Blea Tarn Pass, a rough-gullied descent with four gates which tried the brakes to the utmost; then came Foolstep, a short jump from one altitude to another which fooled no one in his step, then to Ambleside and over Kirkstone Pass on the run. To prospective London-Edinburgh competitors who will have to climb the pass on Whit Saturday it may be comforting to learn that only one or at the most two riders failed to make clean ascents on Saturday. It is impossible to designate those who made good climbs; almost all did so well that comparisons would be invidious.

After Kirkstone, Ullswater was left, near Dockray, for Troutbeck, and a byway course, involving one watersplash, brought the competitors, after an enjoyable tour, to the finish some ten miles from Carlisle. After the final check, a formula hill-climb was held to decide the winner in the very likely event of a tie.

*First Class Awards:*—A. F. Morton (4 Harley); J. P. Bennett (3½ Sunbeam); J. A. Newman (3½ Douglas); A. D. Reid (3½ P. and M.); W. T. Tiffen (2½ Velocette); W. Westwood (3½ Triumph); W. Wells (3½ Sunbeam); B. Kershaw (2¼ New Imperial); W. F. Wannop (3½ Sunbeam); R. Watson (3½ Martinsyde); J. H. Walker (4¼ B.S.A.); B. L. Bird (4¼ B.S.A.); H. S. Perrey (4¼ B.S.A.); J. G. R. Edmondson (2¼ Velocette); L. Edmondson (2¾ Massey-Arran); G. Henderson (4 Triumph); G. Hill (3½ Sunbeam); W. R. Haggas (3½ Triumph); L. Dixon (3½ Norton); C. Webb (3½ Sunbeam); D. Wright (3½ Sunbeam); G. M. Townsend (4¼ P. and M. sc.); D. W. Rhodes (5-6 Scott Sociable); T. J. Ross (7 Matchless sc.); F. O'Brien (7 Matchless sc.); A. E. Pape (3½ Triumph sc.); G. E. Jackson (4¼ Beardmore-Precision); G. D. Barker (7 A.J.S. sc.); G. H. Wilson (2¾ Edmund); R. J. Brooks (3½ Triumph); J. J. A. Dias (8 Morgan); D. Bell (2¾ A.J.S. sc.).

*Second Class Awards:*—R. R. Grindlay (4½ Humber); R. Pape (2¾ Wilkin); B. Cathrick (4½ Dunelt); K. Hodgson (3½ Triumph); S. Bell (2¾ Beardmore-Precision); J. Dall (2¼ Sun-Vitesse); H. Jackson (3½ Sunbeam); B. Bourke (4½ New Hudson sc.).

*Third Class Awards:*—P. L. Mayo (2¼ Coventry Eagle); A. Greenwood (8 Brough-Superior); A. J. Smith (2½ Calthorpe); J. W. Burton (7-9 Harley-Davidson sc.); F. S. Spouse (T.B. 3-wheeler); F. Ball (7 A.J.S. sc.); I. G. Bethwaite (3½ Zenith); J. Monkhouse (6 A.J.S. sc.).

## THE LAW AND BRAKES.

RIDERS of Harley-Davidsons, Indians, and other motor cycles which are fitted with two brakes, both of which operate on the same wheel of the machine, will be interested in the Chertsey magistrates' interpretation of the Act. They have held that the Act provides for a brake to be fitted to each wheel, and that two on the back wheel do not comply with the Act.

This decision was arrived at on Wednesday, when a London motor cyclist was summoned for riding a motor cycle at Addlestone which was not fitted with two independent brakes. Defendant pleaded not guilty, saying his machine, a Harley-Davidson, had two independent brakes fitted to the back wheel. The constable in his evidence admitted that this was so, but the Clerk advised the Bench that the Act stipulated a brake on each wheel, and the Bench supported this and imposed a fine of 19s. 6d.

# BIRMINGHAM INTER-CLUB TRIAL.

## 201 Miles Route causes Few Retirements in South B'ham M.C Event.

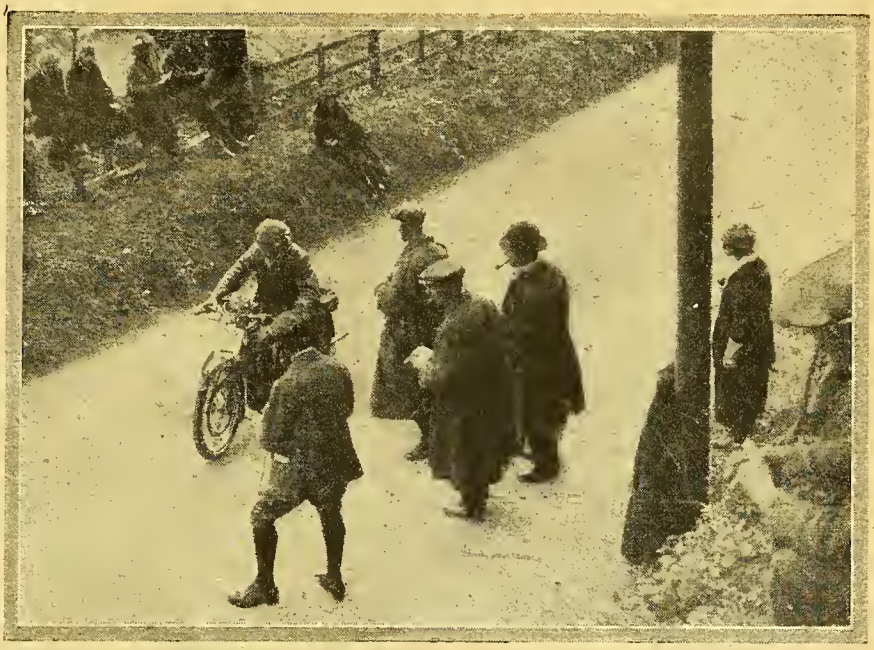
THIRTY-FOUR out of the forty-seven entrants completed the 201 mile course of the inter-club trial held by the South Birmingham M.C. on Saturday. Satisfaction was generally expressed with regard to the choice of route which, although long, was fair. The major portion was divided into non-stop sections so that in the event of trouble the competitors had little chance of making up time.

Starting from Bearwood at 9 a.m., the riders had to cover 100 miles through the Clee Hills district *via* Tenbury to the lunch-stop at Bromyard, there being no observed hills on this part but five non-stop sections. The return journey was through Evesham, Shipton, and Stratford to the 8 o'clock finish at Stonebridge.

### Brake Test Failures.

In this latter half were held "stop and re-start" and "low gear speed" tests on Sunrising Hill. Most did well here, but the next, a brake test on Edge Hill, provided quite a number of failures. The riders had to cover a measured stretch at speed, their time being taken for the distance; having passed the second tape they had to pull up quickly on the hill marks being deducted according to the number of feet overrun.

Several riders were early in trouble, for Hagley Hill, which is only two miles from the start and is usually fairly easy, caused two or three to foot-slog. R. C. Cooper (Allon), however, did not get even so far, for he seized his gear box right at the start.



In the stop and re-start test, A. W. Thrush (499 c.c. Sunbeam) preparing to accelerate.

Finishers:

S. G. Orford (348 Henley-Blackburne).
W. Johnson (292 Allon).
F. Whitworth, Junr. (348 Ivy).
J. C. Edkins (349 Sports Pax).
W. R. Bown (250 Bown-Jap).
H. Greaves (349 Beardmore-Precision).
A. D. Mayo (350 Coventry Eagle).
L. G. Green (349 Verus).
J. W. Moxon (350 Monopole).
S. B. Knox (349 Henley).
T. A. Ward (350 Sirrah-Blackburne).
T. H. Bonham (245 Calthorpe).
J. Drew (750 Brough-Superior).
F. V. Wood (370 Connaught).
J. S. Bacon (492 Sunbeam).
A. C. Cope (494 Douglas).
H. J. Stretton-Ward (499 Triumph).
A. W. Thrush (499 Sunbeam).
Bert Garner (499 Triumph).
P. R. Budd (550 Triumph).
J. Rowan (499 Sunbeam sc.).
T. H. Richards (986 Brough-Superior sc.).
T. R. Gibbins (980 Acme sc.).
Alan Watson (499 Sunbeam sc.).
A. E. Salway (292 O.K. Junior sc.).
H. G. Uzzell (998 New Imperial sc.).
S. Wright (600 Humber sc.).
W. J. Montgomery (986 Brough-Superior sc.).
L. A. Bees (596 Beardmore-Precision sc.).
A. P. McGowran (550 Triumph sc.).
F. A. Boggis (550 Triumph sc.).
W. Ridley (1093 New Hudson).
H. F. S. Morgan (985 Morgan).
F. G. Mann (1000 Morgan).

# LONDON—COVENTRY—LONDON.

## North-West London M.C. Classic Trial held for Seventeenth Time.

THE members of the North-West London M.C. decline any suggestion of abandoning the old classic London—Coventry—London Trial, now in its seventeenth year, but it is found increasingly difficult to provide anything of a serious nature which will yet bring the two cities within the scope of a twelve hours' trial. The timekeeping marking has been stiffened up appreciably, and the inclusion of a tricky eleven miles non-stop in the Chilterns helped to make it something more than a joy ride.

Twenty competitors started out from Hendon at 7 a.m. on Saturday, and at West Wycombe all but one were enjoying something like a second breakfast outside the first check. The secret non-stop followed immediately, and included several hills sufficiently steep, up or down, to make the 20-mile schedule an effort. Bilney (2¼ Holroyd) stopped on Small Dean with a slipping belt, descended, and roared up after adjustment. Burton on one of the cars stopped, but nobly ditched himself to prevent baulking. L. A. Goddard (Matchless sc.) was going well on Kop when his gear-box seized up, and he retired temporarily, but rejoined the procession, travelling well later. Miss Buchan (2¾ A.J.S.) lost her way, and arrived late at Risborough, apart from which her running and time-keeping throughout the day were perfect.

### Excellent Arrowing.

The course was excellently arrowed by the Bucks Club, in which service the Banbury Club assisted further on. Sutcliffe (Morgan) tore off a tyre twice in a very dreadful "colonial" portion; incidentally this lane, which was composed of hard-baked mud billows and ruts, proved a joy to the treasurer, for many a first-class award disappeared hereabouts. Whitefield (Beardmore-Precision) disappeared after the non-stop, and Burton shed a wheel after Sunrising, but resumed.

### Main Road Return.

A contented party made good use of the two hours' lunch interval at the King's Head Hotel, Coventry.

The return journey was uneventful, being almost wholly over main roads.

Results (subject to official confirmation):—

*First Class Awards.*—A. J. Rowe (Morgan), F. V. Edwards (4 Harley-Davidson), E. W. T. Howard (3½ Sunbeam), and H. W. Deacon (3½ Sunbeam).

*Second Class Awards.*—J. L. Johnson (Triumph), C. King (Triumph), H. E. K Sawtell (Morgan), Bilney (2¼ Holroyd), A. Cartwright (3½ Sunbeam).

*The Best Performance Cups.*—Solo: E. W. T. Howard (3½ Sunbeam). Passenger: A. J. Rowe (Morgan).

# CURRENT CHAT (continued from p. 645)

### An Unclaimed Fortune!

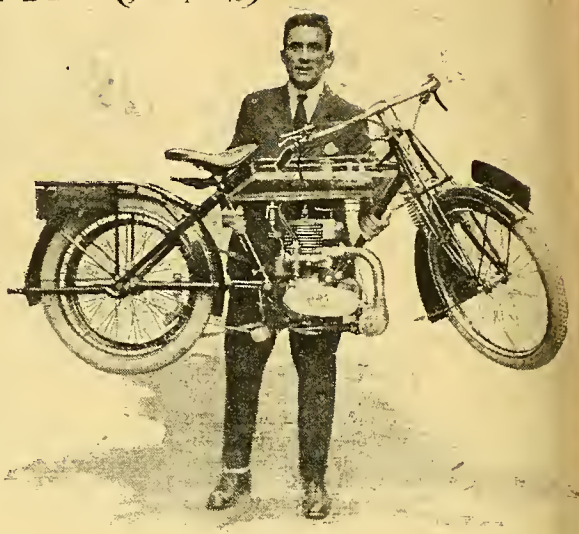
The sum of £8 awaits the owner of the undecipherable signature against "75" in the "gold medallists" competition held in connection with the Scottish Trials. Application should be made to Mr. Fraser, c/o the Edinburgh M.C., 6, Castle Terrace, Edinburgh.

### Scottish Echoes.

In this issue there appears a seven-page article on various aspects of Scotland's most important motor cycle trial, but that does not quite exhaust the available news regarding the event. New Imperial Cycles, Ltd., wish it to be known that their two medals (gold and silver) were gained with standard "light tourist" models, not sports machines; A. H. Alexander's gold-medal winning mount was, of course, a Douglas; and Harry Gold (2¾ Francis-Barnett) gained a bronze medal. Incidentally the Glasgow Western M.C.C. gained the club team prize for the second year in succession.

### A LIGHTWEIGHT THAT IS LIGHT.

One of the pioneer two-strokes, the Connaught, is among the lightest of fully equipped motor cycles. The single gear model weighs but 135lb. A slightly larger type, which has a 370 c.c. engine, is proving itself to be an efficient sidecar mount; it survived the London-Land's End trial, and, although at first reported as an absentee, secured a silver medal. It was the only 2-stroke lightweight sidecar to secure an award.



# CLUB NEWS (continued from p. 646)

### Burton M.C. and L.C.C.

On Whit-Monday (June 5th) the club will hold a reliability trial over a course of 97 miles round Ashbourne district. This trial will count for the Baldock Cup, and the awards to be won outright are gold, silver, and bronze medals of A.C.U. approved pattern.

### Sheffield and Hallamshire M.C. and L.C.C.

Extremely successful half-mile speed trials were held on Ringinglow Road, Sheffield, on the 6th inst before a large crowd of spectators. Despite a high wind some good times were put up, the fastest time of the day being made by R. Flint (3½ Norton) in the solo 750 c.c. Expert Class, his time being 30 secs. from a standing start. Three of the Sheffielders who are riding in the T.T. were competing, viz., Jack Haslam, L. Padley, and R. Flint.

### Leinster M.C.

The club held an open novices' trial on Saturday last over a course of approximately one hundred miles in Co. Wicklow. The route was not a very severe one, and as the weather conditions were favourable, the proportion of finishers was high. Forty-four riders took part in the event, and thirty-two of them completed the course on time. Eight of the finishers reported stops in the non-stop sections, of which there were two, but on the other hand there were only two failures to make clean ascents of the observed hill, the Devil's Elbow, at Glencullen.

### Luton and South Beds A.C.

Very successful speed trials, the first of the season, were held on Saturday at Luton Hoo. Results:

275 c.c. CLASS.
A. A. Swann (New Imperial), 23½ secs.
H. Brosse (Reyre-Newson), 23⅖ secs.

350 c.c. CLASS.
H. Brosse (Reyre-Newsoo), 22⅘ secs.
A. A. Swann (New Imperial), 23 secs.

### North London M.C.C.

Results of the petrol consumption test held on the 6th inst. are now to hand:

350 c.c. SOLO.
1. G. Richardson (2¼ Velocette), 169 m.p.g.
2. S. Forbes-Robertson (2¾ Royal Ruby), 140 m.p.g.
3. T. W. Sullivan (2¾ Levis), 115 m.p.g.

350 c.c. SOLO.
1. R. R. T. Bowen (4 Triumph), 116 m.p.g.
2. C. E. Morris (3 A.B.C.), 115 m.p.g.
3. W. D. Mallet (3½ Sunbeam), 109 m.p.g.
4. C. F. Baker (3½ Zenith), 90 m.p.g.

PASSENGER MACHINES.
1. J. Hawkins (3½ Ariel sc.), 97 m.p.g.
2. R. H. Rivers (4¼ B.S.A. sc.), 82½ m.p.g.
3. W. A. Henderson (5·6 James sc.), retired.

### Newcastle and District M.C.C.

There were 31 entrants in the novices' trial, held on the 7th inst., which was open to all clubs affiliated to the North Eastern Centre A.C.U. Six competitors qualified for the premier award, an enamelled club gold medal, with the result that a secret check between Belsay and Newcastle had to be resorted to so as to ascertain the winner. Results:

1, R. W. Riseborough (10 Morris Cowley); 2 (Gold Club Medal), J. E. Thompson (Dunelt sc.); 3, R. J. Toovey (Norton sc.).

# Humber

4½ H.P.
FLAT TWIN

## For All-round Excellence

EVER since the introduction of the Humber 4½ h.p. Flat Twin model it has given entire satisfaction to a very large number of riders. On no machine will the motor cyclist find so much pleasure and so little trouble. Its uniform reliability, remarkable silence, attractive specification and competitive price all combine to satisfy the discriminating rider, while the new Sporting model makes a special appeal to the sporting cyclist.

*Finished, if required, in black without extra charge, the Flat Twin is ideal for all-weather work.*

# CHEMICO

## The BEST the World produces

**You get more miles to the gallon with COOLIE MOTOR CYCLE OIL.**

It's not the PRICE per gallon, but the MILES per gallon, that determine the cost of your Lubricating Oil, and it is when judged by mileage that COOLIE Motor Cycle Oil shows how little it really costs. Not only that, but its combustion is so perfect that an engine lubricated with COOLIE Oil can be run for longer periods without decarbonising than when lower grade oils are used, effecting a saving in maintenance cost which must be subtracted from the initial cost of COOLIE Oil. Get the best running from your engine by using COOLIE Oil. It is obtainable from most Garages and Cycle Dealers, but if you have any difficulty in obtaining supplies write us direct, giving the name of your usual Garage, and we will see you are supplied.

Doors hung on strong garnets, and fitted with lock and key and tower bolts. Windows glazed: 21oz. glass. Flooring: Strong joists, one inch boards. All bolts supplied for erecting house.

# MOMENTS of JOY

**The enthusiasm of the critical moments of joy will lose their zest if your passenger arrives cold, wet, or dusty.**

**Not one element contributes more to your pleasure and sense of motoring security than the knowledge that your sidecarist will be efficiently protected whilst getting there and back. The discriminating motorist demands an "Easting." It prevents ruined clothes and provides infallible protection from any weather conditions, wind, rain, dust, cold, and broken glass.**

An unsolicited testimonial from U.S.A.:—

"The other night we took the Sideback to the theatre in a pouring rain. Friend wife arrived dry. The Easting was tipped clean up and the rain seems to be picked up by the wind and spilled behind the Sidecar.—F. R. P."

# 15/- REDUCTION

## COX "ATMOS" CARBURETTER

## A UNIQUE OFFER to the Motor Cycling Public from now until June 30th.

The average motor cyclist does not realise what it costs to the manufacturers of machines and accessories to have same throughly well represented in a race like the T.T. in the Isle of Man, and such like events. The cost is very heavy indeed, and many who are not actually connected with the trade have a reasonably good idea of the expenditure entailed.

The Directors of Cox Carburetters, Ltd., have decided—that as the speed capabilities of the Cox "ATMOS" were amply proved last year, winning as it did:

**13 WORLD'S RECORDS,**
**40 SILVER CUPS,**
**250 GOLD MEDALS and**
**100 OTHER AWARDS, also**
**1st in 1921 T.T. FLYWEIGHT CLASS "THE MOTOR CYCLE" CUP and FASTEST LAP,**

and as it is a carburetter really designed to give the ordinary rider that pleasure of driving flexibility and economy, no fuel carbon, and longer engine life—that instead of spending more money to prove what has already been amply proved, to consider the ordinary user, that from now until June 30th next, to offer 500 Cox "ATMOS" motor cycle carburetters to the public at a reduction of **15/-** per instrument, making the retail price—

**£3 15 0 instead of £4 10 0**

**Since our advertisement on May 4th announcing this special offer, we have received a great increase in orders from Agents and private owners.**

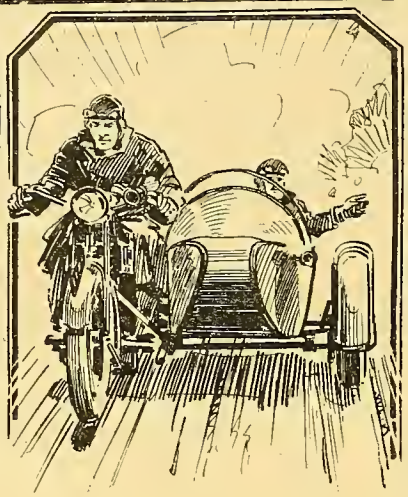
**In consequence, it is expected that before this advertisement appears, that the 500 Carburetters will be sold, in which case the offer will not extend to June 30th**

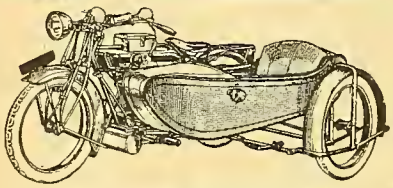
**NORTH-EASTERN CENTRE OPEN RELIABILITY TRIAL, 22ND APRIL, 1922,**
**"TRAVERS" TROPHY VALUE 200 GUINEAS,**
**WON ON 2¼ NEW IMPERIAL FITTED COX "ATMOS."**

**COX CARBURETTERS, LTD.,**
**LOWER ESSEX STREET,**
**BIRMINGHAM.**

# Matchless

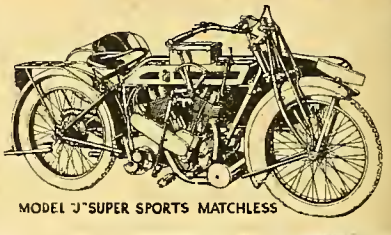
THE PERFECT PASSENGER MOTORCYCLE





Model "J" Sports with Sidecar.

PRICE £160
or Easy Payments.



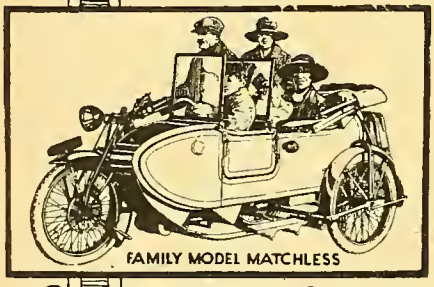
MODEL "J" SUPER SPORTS MATCHLESS

PRICE £165
or Easy Payments.

We ride the "Matchless" because we know there is no better machine on the market and we can recommend it from actual experience.

Our showrooms have a full range of "Matchless" machines and our arrangements with the manufacturers enable us to offer Immediate Delivery.

We are the official "Matchless" Service Agents for our district and can fully meet all your requirements.



FAMILY MODEL MATCHLESS

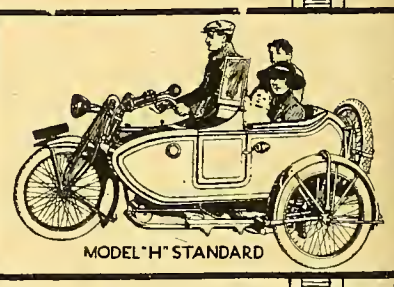
PRICE £175 10
or Easy Payments.

We shall be glad to arrange Easy Payments over a period of

18 MONTHS

if you so desire.

Our system of Easy and Extended Payments is most satisfactory and helpful. Remember—Easy Payments are only 4% extra, and Extended Payments mean only ¼ down and the balance paid over a period of 12–18 months.



MODEL "H" STANDARD

PRICE £170
or Easy Payments.

# *Do you realize*

that the "Lock-out" in the engineering trades has once again partially crippled the motor cycle industry.

The damage is done, and if an immediate settlement of the dispute could be effected there would still be a shortage of motor cycles for some time.

If you are considering buying a new machine you would do well to decide at once and place your order, as delay will result in disappointment.

Unfortunately we in common with other Agents are already unable to quote deliveries of certain makes, but at present we can supply most models of the following.

## NEW 1922 MODELS

A.J.S.
ALLON.
ARIEL.

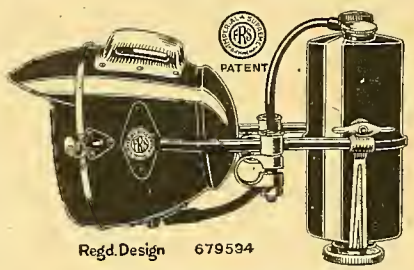
F.R.S. ACCESSORIES

The ever-increasing demand for F.R.S. Accessories is due to their outstanding superiority—first in 1909, they are still first to-day, as comparison will convincingly prove.



**The famous F.R.S. Streamline Projector Se:**

50% more powerful than any other.

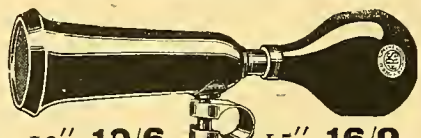
F.R.S. hold the World's Record for Beam Power—and have done so since 1909. The scientifically ground optical lens fitted to F.R.S. lamps is a special and exclusive feature—the whole surface is so worked that every portion gives reflection of equal intensity.

The F.R.S. Headlight is delightful to ride behind—it gives a continuous and unvaried, powerful, penetrating, WHITE beam which illuminates the road far ahead.

7" "MAJOR" Set, 1,000 ft. Beam, 90/-

6" "BIG" 63/- 5" "JUNIOR" 45/-

When comparing the F.R.S. with any other lamp bear this important fact in mind, that the body diameter of the smallest size is 5 INCHES.



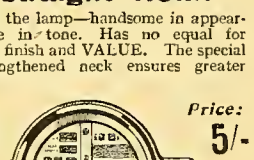
13" 10/6 15" 16/9

**F.R.S. Straight HORN**

—as supreme as the lamp—handsome in appearance, distinctive in tone. Has no equal for absolute quality, finish and VALUE. The special bulb with strengthened neck ensures greater durability.

**The F.R.S. Licence Holder**

Price: 5/-



—another example of F.R.S. supremacy. Has no loose nuts and bolts, sharp edges or ugly clips. Secured together by ONE patent binding rim and ONE large nut. Absolutely watertight, adjustable to any angle, made of BRASS throughout. Supplied in any finish.

GUARANTEED GOODS. Cash with Order.

Our guarantee is your safeguard. Money returned, either through your dealer or direct, if you are not perfectly satisfied in any direction. Ask for complete list.

**Our unsolicited testimonials should create confidence.**

27, Foxley Lane,
Purley, Surrey.

Gentlemen,

I am very pleased with Garage sent me and think it is excellent value for the money.

Yours obediently,
W. GORDON FOWLER.

74-84, Banner Street,
London, E.C.

Dear Sirs,

The Garage arrived and is quite satisfactory and we have recommended several people in Wembley to place their orders with you. You have already supplied a gentleman through our recommendation.

Yours faithfully,
CHATER LEA, LTD.,
(Motor Experts).

30, Brewery Street,
Pembroke Dock,
South Wales.

Dear Sirs,

Building received, and very well satisfied with it. Many thanks.

Yours faithfully,
A. PARKES.

# Banish Wet Weather Belt Troubles

Don't blame your engine if it seems to lack power. Probably the belt slips, especially in wet weather, in which case 10%-40% of your engine output is lost. You can put things right by applying

**Erusa**

to the belt. This will make a great improvement. The engine will pull better, and the belt will never slip, even when soaking wet. We guarantee it! Order a tin to-day.

*If your dealer cannot supply from stock send 1/6 (plus 4d. postage) and we will forward a tin by return.*

**Thomas & Bishop, Ltd.,**
**37, Tabernacle Street London, E.C.2.**

**ASPINALL'S**

# CYCLE BLACK

**(AIR DRYING)**

Lieut. ———, R.N., writes:—

***"A pint of your Cycle Black and a lick of Varnish has made my 1915 Studebaker look like a new car."***

NOTE.—A small tin of Cycle Black will do the same for your motor cycle combination.

Stocked by ironmongers and accessory dealers everywhere.

**ASPINALL'S ENAMEL Ltd.,**
**NEW CROSS, S.E.14.**

Varnish Works, Mitcham. Telephone: New Cross, 42 & 206.

1918 4h.p. Countershaft Triumph, new P.H. la new rear tyre and tube, exceptional condit for 8h.p. Zenith; sell £65.—Downview Garage, Worthing. 'Phone: 569. [8

EXCHANGE Harley Combination, 1918, overha and perfect throughout, for Indian or chea seater and cash.—Langford's, 37, Cricklewood Br way, N.W.2. Hampstead 8616. [8

EXCHANGE.—Any make of new car or motor supplied; your present machine accepted in payment.—Newnham Motor Co., 223, Hammersi Rd., W.6. 'Phone: Hammersmith 80. [7

EXCHANGE 1920 Pearson and Sopwith, 2-sp lighting set, horn, etc., and cash, for Dougla Triumph Combination, 1920 or later.—Walker, Romford Rd., Manor Park, London, E. [7

BAT-J.A.P. 6-8h.p., 2-speed, clutch, Mills-Ful sidecar, electric light, hood, lamps, just hauled; bargain, £45; or exchange lightweight cash.—2, Limes Ave., Mill Hill, N.W.7. [8

HERBERT ROBINSON, Ltd., Green St., bridge, will take your present car or combina in part exchange for a new model. We give a deal for cash. Exchange or easy terms. [8

INDIAN Combination, 7-9h.p., Powerplus, 1 complete with lamps, etc., in extra good dition throughout; £75, or exchange for solo mach —157, Burntwood Lane, Earlsfield, S.W.17. [8

ZENITH 6h.p. Coachbuilt Combination, f equipped, almost new tyres and belt, in s did order, for higher power, cash adjustment sidered; sell £85.—34, Seymour Rd., N.8. [8

PIANO, upright, practically new, splendid t valued 55 gns., offered in exchange for late m combination; cash adjustment either way; Match A.J.S., or Enfield preferred.—Box 1322, c/o *The M Cycle*. [8

EXCHANGE Late Model Ford Char-a-banc, D body, Michelin detachable wheels, new 3 tyres, plated fittings, splendid condition, for combination and cash.—Eton, 260, Balham High Balham. [8

ROVER 3½h.p. 1920 Tourist model, countershaft speed, clutch, etc., brand new never ridden, change for Baby Grand piano, well-known m Letter first instance.—Advertiser, 144, Gt. Port St., W.1. [8

EXCHANGE 15.9h.p. S.C.A.R. 2-3-seater Coupe, dickey, dynamo lighting and starter, for bination or smaller car and cash.—Newnham M Co., 223, Hammersmith Rd., W.6. 'Phone: Ham smith 80. [7

1915 7-9h.p. Indian C.B. Combination, 3-sp K.S., electric lights and horn, excellent dition, stored 4 years, for solo Norton, Triu Zenith; sell £70.—Downview Garage, West Worth 'Phone: 569. [8

SCOTT 3¾h.p., water-cooled, 2 speeds, 1912, chain, engine overhauled by makers, cost £40 (receipt shown), very powerful; exchange 2-stroke or 2¾h.p. Douglas.—Mead, Draper, A sham, Bucks. [8

PETER GORDON, Ltd., have Norton, Sunbea Harleys, Douglases, Triumphs, A.J.S., etc., exchange; cash either way. List free. See small vertisements. Open Sundays.—110, Upper Richm Rd., East Sheen. [8

1919 Tamplin, 2-seater, 8h.p., 3-speed, £70; 3-w Runabout, similar to Coventry Premier, 9 3-speed and reverse, £120; 3½h.p. Rudge, cl model, £21; exchange combination.—Brown, Dar Rd., Ingrow, Keighley. [8

HENDERSON Combination, 10h.p., 4-cylinder, cellent condition, spring luggage and can car Easting, etc., licence paid, any trial, for mec power combination, single or twin. Seen after Derby Arms Garage, East Sheen. [8

LIGHT Car, 4-cylinder, 3 speeds, reverse, enc valves, automatic lubrication, central change, 2-seater, re-painted, new tyres, new b electric lighting; sell £140; exchange modern bination.—1, Townley Rd., S.E.22. [8

## The Tourist Trophy Races.

BEFORE the next issue of *The Motor Cycle* is in the hands of our readers the Lightweight and Junior Tourist Trophy races will have been won and lost. In spite of the indifferent weather conditions prevailing for the first week's practising some very good speeds have been attained by these small machines, and it is anticipated that, once again, records will be broken, thus testifying to the increasing efficiency of the 250 c.c. and 350 c.c. motor cycle engine. Last year's win of a Junior mount in the Senior event proved that these small engines were equal at least to the 500 c.c. type on the Isle of Man course. Next week's races may decide several momentous questions.

## Mechanical Lubrication.

THE practical utility of road racing has oft formed the subject of discussion; no finer example of its true worth can be quoted than the general adoption of mechanical oil feed for next week's Tourist Trophy races. The majority of competing machines will be fitted with some form of oil pump delivering lubricant direct to the crank case and thus relieving the rider of much responsibility. This is a step in the right direction, eliminating as it does the personal factor in the all-important matter of lubrication. At least one leading make of motor cycle will have dry sump lubrication with a constant flow of oil to and from the engine, while another machine holding a high position in public favour has a foot-controlled oil pump only because its own rather novel mechanical system of oiling was developed too late to be incorporated in the T.T. models.

It is true that at present auxiliary hand pumps are still incorporated in most designs as a stand-by, but as further experience is gained these secondary systems will be found unnecessary for normal use in the hands of the public, and there is little doubt that, with a general adoption of mechanical lubrication, ensuring a steady and even flow of oil, there will be less trouble caused by carbonisation and unevenly lubricated engines.

## Inter-Club Rivalry.

THE enormous increase in the number of inter-club events this year is a very happy sign that the purely sporting side of the motor cycle competition world is not being so wholly swamped by commercialism as one or two other recent happenings might cause the uninitiated to believe.

There is everything to be said for, and nothing against, the encouragement of this type of trial. When men ride for the honour of their clubs the affair breeds only the best type of friendly rivalry, and true sportsmanship is present to an even greater extent than in a competition confined to the members of only one club. Not that the latter usually lacks a thoroughly sporting spirit, but, nevertheless, the very essence of sportsmanship is only brought out when the participants in the contest are struggling for more than mere laurels for themselves.

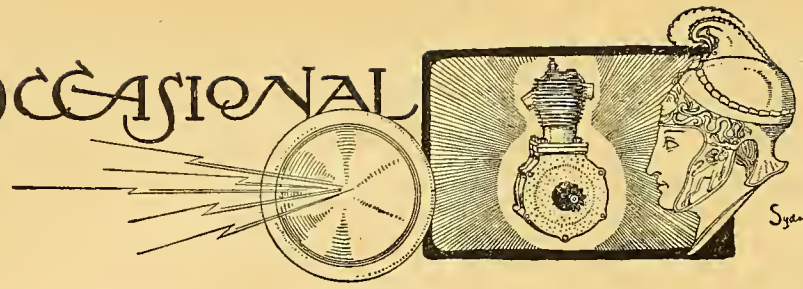
To any secretary who is worried by the apathy of his members we commend the suggestion that he endeavours to arrange, say, a team event or hill climb with some neighbouring club or clubs. He will find that it will prove a very enjoyable affair and a wonderful reviver of interest to boot.

Next month, the 24th prox., the annual club team championship event of the Motor Cycling Club is down for decision. This is the fifteenth trial for *The Motor Cycle* Challenge Cup, and usually attracts the pick of the amateur motor cycling talent of this country to do battle for their respective clubs.

An index to the advertisements in this issue will be found on the page facing the back cover.

# OCCASIONAL COMMENTS

By "IXION"



## How Not to Skid.

AFTER taking a tremendous toss the other day on a greasy road, I consulted three tame experts as to the secret of verticality on grease. The first remarked "Speed! Keep the throttle wide open, and she'll cut through it!" The second said, "Stand on the footrests and leave the bike to balance herself!" The third replied, "Get a hard saddle. These modern comfy saddles chuck your weight all over the place, and, of course, she wobbles." In the multitude of counsellors there may be wisdom.

## Not for the Stunt Merchant.

A GAP in the competition programme is shown up by the entry of two Harper Runabouts in the Scottish trials: for this machine is designed for the lady of the villa, the tennis court, the boulevard, and the golf links, rather than for the professional stunt-merchant. Nevertheless, the pair did miraculously well. The whole design is extraordinarily ingenious, and readers should study it in detail when they meet a Harper in the flesh. A machine which cannot skid, climbs practically anything, weighs next to nothing, and runs on air (almost) is bound to make good. It has a mechanical starter, interchangeable wheels, detachable rims, straight-sided tyres, and all manner of gadgets, while the suspension is admirable. A famous T.T. rider told me he had done his best to capsize a Harper without success. Several of the leading agents tell me they could sell it by the hundred if its price were a little lower; they are all great admirers of it from the technical and practical standpoints.

## Some Engine!

NEW engines always fascinate motor cyclists, though we seldom buy them till we get public proof of their stamina. I have often heard of the G.R.I., but I did not make its intimate acquaintance till the Land's End run, when it was hampered by a lathe hand who had turned its piston to .003in. clearance instead of .008in. I pricked up my ears, because its weary owner remarked that he never carried a spare valve, didn't take any stock of stainless steel, and would guarantee his common or garden 3% nickel steel valve till the last trump blows. So I naturally investigated. This quaint engine has only one valve, which alternately lets in the cold gas and lets out the hot flame. These two streams are prevented from mistaking the carburetter for the silencer by an unlubricated rotary valve, which shepherds everything to its proper destination, and is itself in a sheltered position aloof from the combustion chamber. So no part of the engine ever gets really hot.

## More to Come.

BUT this is only half the tale. A nice cool valve is interesting enough. But during the war I saw a little of various frantic attempts to supercompress the charge in aero engines, with a view to compensating for the frightful loss of power which occurs when an engine is flown to 20,000ft. or so. The Germans evolved one engine with a compression ratio of about 6 to 1 (if memory serves me aright). We promptly shot down a sample, but couldn't make it work on any known fuel, and decided that the German must run it on rum and milk, or some other weird mixture. Five to 1 is regarded as quite a high compression ratio at ground level, and 6 to 1 as the outside edge of the absolute stunt limit. But the G.R.I. people calmly adopt 6.5 to 1 as their standard touring compression. If you aren't engineer enough to know what that means, dear reader, let me say that the more you compress one gasified drop of petrol before you fire it, the bigger punch you'll get when it goes off; it's just the difference between the same boxing glove with (*a*) my left inside it and (*b*) Dempsey's left inside it. So the G.R.I. people get 16.8 b.h.p. at 4,200 r.p.m. out of their 500 c.c. engine, and can easily run it on paraffin if they want to. With an everlasting valve, too. Why isn't it in the T.T.? I hear they will use a ratio of over 7:1 on Brooklands ere long.

## More Anatomy.

A FAIR correspondent requests me to issue a comprehensive invitation to all motor cycle manufacturers producing ladies' machines. Will they please attend the next dance in their neighbourhood? If invitation, this will be easy; if subscription, Motorina will forward cost of tickets on request (limit, 1s. 6d.). On reaching the hall, will these makers select an average British girl apiece (not golf or hockey champions), make the running fierce, presently sit out a dance, and retire to a secluded corner of the conservatory. Having proceeded thus far, the next order of the day is to overcome natural bashfulness, take the fair damsel's hand, and toy with it. While toying with the hand, stroke the thumb and forefinger, making careful note of the span. On return to business next morning, let the several manufacturers measure the span required to operate the handlebar clutch levers of their ladies'

*Ixion's "MOTOR CYCLE REMINISCENCES" are available in book form, price 2s. 9d. post free, from "The Motor Cycle" Offices, Dorset House, Tudor Street, E.C.4.*

**Occasional Comments.—**

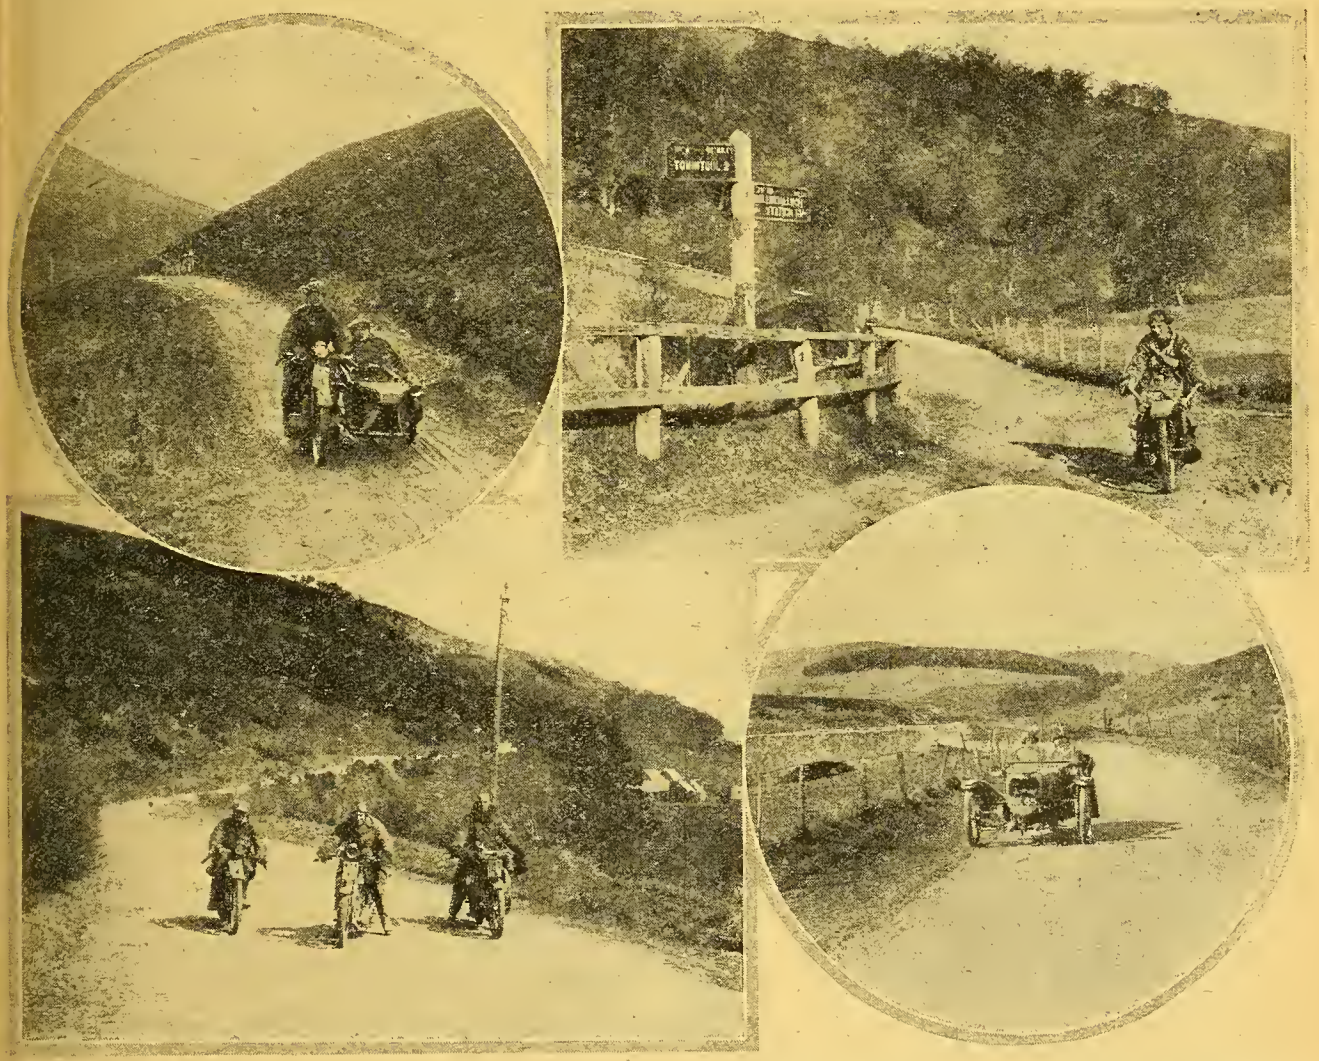
models. They will then realise why, when a lady motor cyclist changes gear, she creates a noise like pushing a length of railway line against the teeth of a high-speed circular saw.

### Ungallant!

IN an obscure provincial club two of the keenest members are Mr. and Mrs. Smith, both of whom compete in club events when their engagements permit. Each of them owns a sidecar, and it occasionally happens that only one of them can get away at a time. The other week Mr. Smith had his day off, competed in the club's petrol consumption trial for a plated toast-rack presented by the local brewer, and managed to upset his outfit on a corner. Mrs. Smith was away from home, staying with her mother, and she incautiously addressed the daily affectionate postcard to "Turnover Smith, Esq." I say "incautiously," for on the next Saturday Mrs. Smith competed in the club's speed-judging trial, *and she, too, turned over*! Fact! I hear this sporting lady is afraid to go home.

### My Idea for a Six Days.

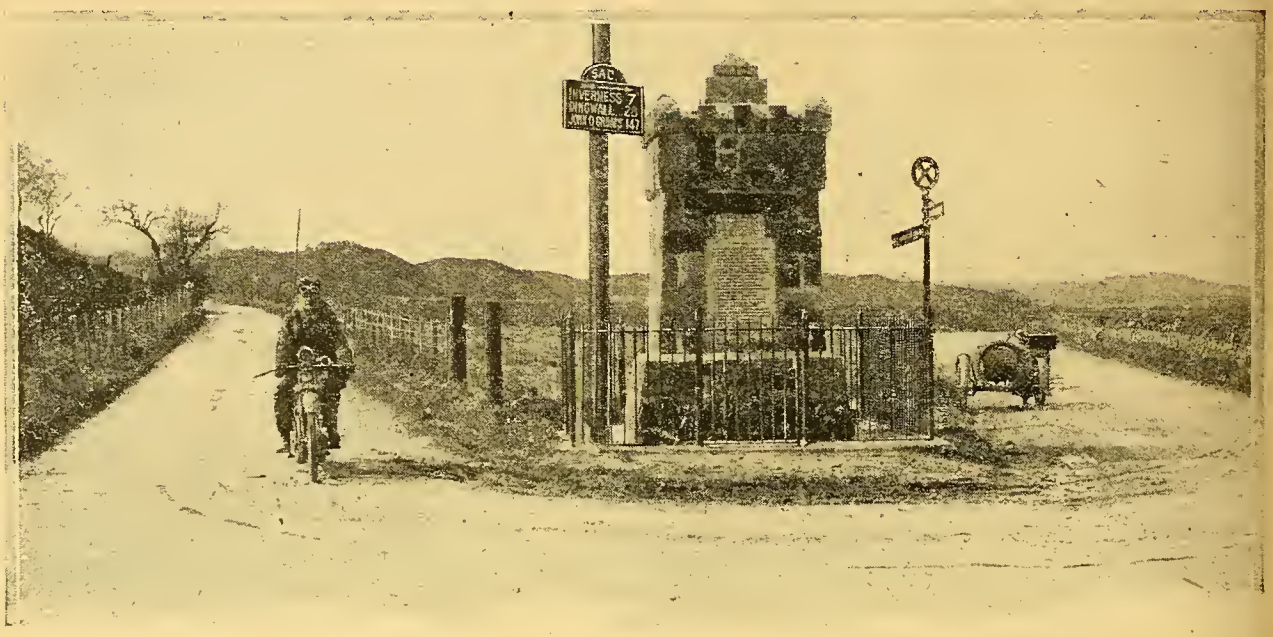
I AM fed up with the current type of Six Days' Trial, in which machines are first racketted over a brief colonial section to start things breaking, and then burbled for a week over easy main roads to give the damage time to develop. Club secretaries tell me that their hands are tied by the problems of hotel accommodation. Well, here's my remedy. Rent a couple of large fields, in the Western Highlands, for preference. Erect three large marquees to serve as (1) official garage, (2) official mess, (3) official bar. Hire bell tents *ad lib.* for the competitors; boy scouts or ex-service men to cook. Then make the boys climb freak hills and shudder over colonial sections all day and every day for the entire week.



OVER THE MOORS AND THROUGH THE VALLEYS OF SCOTLAND. (Top.) J. Richardson (592 c.c. Lea Francis sidecar) on the moors near Tomintoul and Mrs. Jansen (211 c.c. Ner-a-Car) at Bridge of Avon. (Bottom.) A trio near Lumsden. W. E. Smithie (490 c.c. Norton), J. R. Fellows (499 c.c. Sunbeam), and C. Guthrie (698 c.c. Raleigh). The circle shows W. A. Carr on a De Luxe Morgan near Dufftown. All were competitors in the recent Scottish Trials.

# ON SCOTTISH HILLS.

## How a Sports Sunbeam stood up to Eleven Days' Hard Riding Without Attention.



At Craggie Inn, seven miles from Inverness. At the corner is a massive granite war memorial.

THERE is no more enjoyable means of getting about than on a sporting solo motor cycle. The writer makes the statement with a sad heart, for he has just had his own machine, which is of this type, stolen! But this article relates to a borrowed Sunbeam, taken, in fact, from the Editor's garage at a moment's notice for the most strenuous trial to date of 1922.

Glittering like a show-room model, and almost as "new" internally, the Sunbeam—actually of 1921 vintage, Sports type, and with perhaps 1,500 miles to its credit—was dragged into the rain some three days before the Scottish trials started, replenished with petrol and oil, burdened with much luggage and a rider and headed for Edinburgh. For the following eleven days its feelings, if any, had perforce to be entirely neglected, and it received no more attention than a labourer gives to his wheelbarrow. But pressmen win no gold medals!

### Hard and Fast Driving.

Lubricating oil and petrol were supplied as available. For the rest, it was simply driven—hard and fast.

At the end, and after one or two minor attentions, it was ready for the same journey again. Such service after such treatment is surely noteworthy.

Involuntary stops, there were three. The first, very involuntary indeed, deserves record in detail, for it was rather a remarkable road accident. After seeing the riders up Trinafour, I overtook the tail-end competitors on the Pitlochry-Perth road, intending to run straight into Perth. At the point where the route made a detour for Aberfeldy I was batting along at an easy pace perhaps 30 yards behind Mrs. Hardee, the lady Matchless driver. In front of both of us was the yellow streak of dye running round the sudden right-hand turn to Aberfeldy. My route was straight on, but Mrs. Hardee's was to the right. Naturally, therefore, I kept right on her heels, intending to slip by, inside, as she turned off. Unfortunately she missed the turn, pulled up suddenly, and drew to the left to turn in the road. There was not time to pull up dead, and less than two seconds to decide whether to pass the Matchless inside or outside. "Inside" had it; but the passage was too narrow, and the Sunbeam's front number plate got gently scraped off by a low stone wall.

I have given considerable space to this incident because a thorough analysis of the circumstances fails to show how it could have been avoided. Like a quarrel, an accident sometimes takes two to make it; more usually one at least is very much to blame; but in this case it appeared to be inevitable. Probably the brakes of the Matchless were fractionally better than the Sunbeam's, and perhaps the former was braked fractionally before the latter.

### Unfairly Branded.

This, then, was my first involuntary stop; and a particularly annoying one, for it branded the "beam" as one of the fallen—there were many bent mudguards and footrests before the week was over—whereas a machine steadier on uncertain going is not made. Two punctures, both nails, and repaired without removing the wheel, complete the list of troubles.

Returning, therefore, to the no-trouble miles, there are one or two particularly noteworthy characteristics

**On Scottish Hills.—**

of the machine which call for a word or two. Its controllability, or perhaps, more exactly, the layout of controls combined with riding position, is remarkably fine; and this factor, I think, accounts for the absence of any desire to wave one's legs on such an atrociously unsteady surface as, say, the Bridge of Avon—Granton section on the second day. Actually I am convinced that the Sunbeam steers no better than any other purely solo mount of the same type; but the rider becomes, centaur-like, so much part of the machine that the rear wheel may skid violently—it did occasionally on treacherous surfaces in the Scottish—without causing him to lose confidence in its eventual stability. It is a machine that will convert the average duffer into a good rider, in the "observed colonial section" sense, after his first hundred or so miles in the saddle.

### Comfort to Body and Mind.

It has two minor faults only from the point of view of a pressman who covers a strenuous trial every second week or so and who has not yet found perfection. It is undertyred; 26 × 3in. or even 28 × 3in. tyres are a wonderful comfort to body and mind, and I have yet to be convinced that the larger section covers roll more readily on certain or any types of road. Secondly, if the rear brake had a greater frictional area and were more heavily built all round it would require less frequent adjustment.

For the rest, it is almost impossible to comment adversely. Although de-coking must have been sadly needed before the week was half out, I made gold-medal climbs of all the hills. On Inverfarigaig, true, I footed twice, and on the first occasion, too, the Sunbeam was not entirely guiltless; the drip feed pump at the end of its stroke fouled the handle-bars, thus failing to allow sufficient steering lock to preserve a wobbling balance.

The average speed must have been pretty good; on Saturday, for example, the writer saw every competitor up the first hill of the afternoon, Tynron, and was back in Edinburgh before "No. 1" had climbed Blackford—and this sort of thing had been going on all the week.

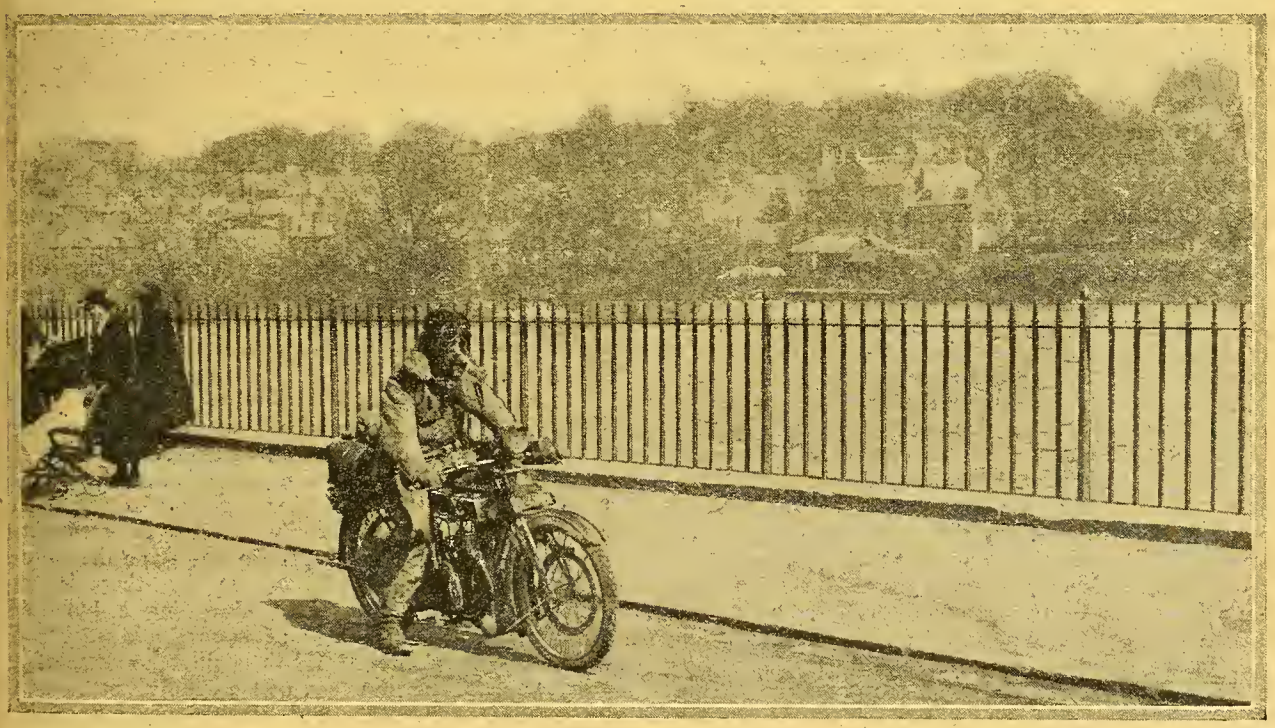
### Where a Kick-Starter is Needed.

Two or three yards paddle down the nearest convenient slope always served to get going from cold; but in their 1922 model the makers themselves have recognised that a kick-starter is well worth its weight in metal on certain occasions. My procedure after a stop for observations on a hill was simply to run down and turn round, but the latest type would certainly have been more convenient.

Petrol consumption averaged 65 m.p.g.; which under the circumstances was not at all unsatisfactory, but the compulsory mixture of many lubricants—it was nearly Ford oil, one day—made the figure in this respect rather high, and is a practice to be avoided.

Competitors' own views and the list of retirements, commented upon last week, agree to prove that the event was a searching test of mechanical fitness. In my case, as I have attempted to show, this severity was increased quite 50 per cent. Yet during the whole time I was able to forget my mount, concentrating on the trial and the full appreciation of Scotland's magnificent scenery.

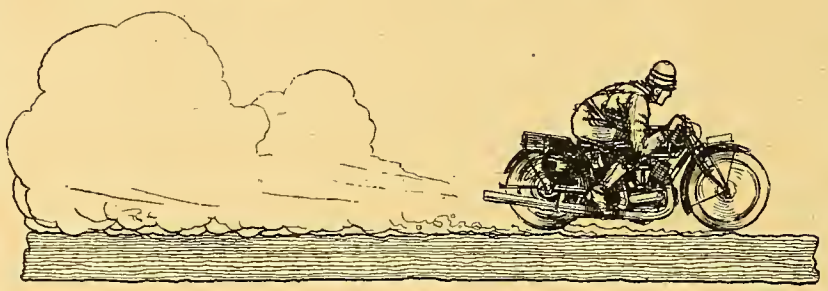
Thus, my opening remark that there is no more enjoyable means of getting about than on a sporting solo motor cycle. And for the last four words I might fairly substitute "Sports Sunbeam." A. McL.



On the banks of the Tay at Perth. The motor cyclist is fully prepared for rainy weather.

# WHO WILL WIN?

## Chances of Riders and Machines in the Lightweight and Junior T.T. Races discussed by "Michael Kirk."



THE probable winner of the Lightweight Race takes more finding than "the lady" in the three card trick. The pace of this race is comparatively slow (the record lap is 9m. 13s. slower than the Senior record), and, so far as jockeyship goes, lots of men are class enough to score in a no-trouble ride; in fact, in the 250 c.c. event the machine deserves more credit than its rider, whereas in the two bigger categories I personally award the bulk of the honour to the man.

### Battle of Proprietary Engines.

Another difficulty is that about half the entry will use the same engine (J.A.P.); nobody knows more about tuning this engine than its makers, and they will doubtless put their knowledge at the disposal of all their customers. Last year the J.A.P. engine had a comfortable margin of speed over the best two-strokes—the Levis, Ivy, and Velocette. But during the interval some of these two-strokes have been hotted up quite remarkably, and they stick sustained speed much better than they used to do. I have not seen much of the Levis lately, but it is the Abraham from whom most two-stroke bicycles are descended, and it is sure to be there or thereabouts at the end of the fifth lap.

For the Velocette I have the most unfeigned respect—the last one which I sampled had been supplied to a private owner, and showed the kick of quite a warm 500 c.c.

### Outside v. Inside Flywheels.

The Blackburne engines have had many a tussle with the J.A.P.'s in all sizes, and have often held their own; this year's unit is extremely attractive. Outside those who must provide the favourite, there are lots of promising outsiders, amongst which the Sun-Vitesse has proved its ability to stay the course.

To get down to a tentative decision, I must admit that the prospects of a two-stroke winning outright do not appeal to me; they got very close last year, but the four-stroke has equalled all their progress since. So I expect to see a J.A.P. or Blackburne engine win. Allowing for the usual chapter of misfortunes, a big entry has the best chance, and the New Imperial disposes of seven riders, including last year's winner in D. G. Prentice, and a second string whom I personally regard as the second best all-round rider in the country—Bert Kershaw. Kershaw may not be a super-speedster, but he is quite fast enough to win this event, and he will make no blunders. If I were a bookie I should regard this pair as likely to beat the field between them. Danger may be specially apprehended from the Sheffield-Henderson duo. This latter organisation gets the last ounce of punch out of the o.h.v. Blackburne engine, and is out to establish a unique speed reputation in the baby class. If J. C. Whalley is half as good a man as his brother, the Massey-Arran will get a run for its money. Wade looks the fastest of the Diamond crowd, Davison should lead the Levis string, and there remain two more teams which look formidable to a prophet who has not yet seen much practice. The O.K. trio are all good men: North has finished as high as tenth in a Senior race; Hall and Handley are first-raters without Manx experience. The Velocette I shall tip as the speediest two-stroke; we all know that Judd can sit anything on wheels over Brooklands, and Denley rode well last year.

## THE JUNIOR RACE.

The Junior race looks much less open than the Lightweight. To follow the stable in form is always a good rule, and the A.J.S. demonstrated so colossal a superiority last year that a 1922 failure would be a real shock. They are more likely to have hotted up their 1921 engine than to have spoilt it by any minor alterations. They dispose of seven riders, including last year's second, third, and fourth, the 1921 Senior winner, *plus* useful men in Harris and Longman, a promising *débutant* in Grinton, and Chambers, whom I do not know. One or two of these men, notably Harris, are faster than the "book" indicates—able to startle us all if they have the luck to get a non-stop in the race. Backing any stable against this crowd would be as plucky as pitting a cadet corps against the Prussian Guard. Of course, H. R. Davies and the others get no younger, and youth must be served.

### Single v. Twin.

However, when I scrutinise what they have to beat I can only find isolated individuals whose chances seem poor on paper, though a few hours on the mountain in those chilly Manx morning mists might fetch out my pencil. For example, I shall be very surprised if the Douglas people do not stage the absolutely fastest machine in the race; but there is not much weight to play with in designing a hot-stuff Junior, and over five laps of bounce and racket I prefer the chances of a solid little single to those of a small twin. Still, the race will certainly not be won by anybody till Pullin and Haslam are out of it. Whalley has already earned his spurs in the select company of men who can ride hard without running

**Who Will Win?—**

undue risks. With a non-stop he can win outright. Le Vack is another threatening entry, but I always think that his track work is just half a class above his road speeding. Victor Horsman, too, carries my money oftener at Brooklands than he does in the Island, and the Sheffield-Henderson riders would create a real surprise if they outrode the A.J.S. stable, though I quite expect their machines to streak round the course.

I have omitted lots of dark horses, and am quite prepared to look exceedingly foolish if in practice some budding George Dance creates a reputation and rides the rest of the field off their legs in the actual race. But it must be recognised that Junior speed is now getting precious near the limit which the course will hold. When the field begins to circle at this kind of bat, there are always two or three men who stand out in a class by themselves; and if they get anything like a clean run, the trophy is in their pockets.

### Last Year's Senior Winner.

The A.J.S. team includes in H. R. Davies possibly the finest road-racing man whom our sport has yet produced, and behind him there are two or three others very nearly as good. The merest trifle will deprive a man of all chance of victory—one tiny miscalculation at a corner which is hardly worth calling a corner, one small nail standing up on its nasty little head in the roadway, one infinitesimal little flaw in any of a hundred bits of metal, one small error of temperature in cooking a piece of steel, one slip of a tool in the machine shop—so the isolated individual, however formidable, can never be wisely fancied to defeat a large team.

Honestly, I do not consider it as healthy either for sport or industry that all the honours should stay in one hand. When the Roman generals of ancient days rode in their triumphal chariots to the Capitol after a great victory, a slave stood behind them and whispered in their ear, "Remember that thou too must die!" Not for ever will the hitherto invincible A.J.S. monopolise the Junior and make the Senior entrants fear a defeat which is also a humiliation. But I can see no ground for supposing that the A.J.S. runs very grave risks of losing the Junior this season. If the Douglas people had entered a bigger team of picked men, the struggle might have been more equal. As things are, I should expect to see a solitary representative of some other make—probably a Douglas—contesting the issue fiercely with a regular horse of the A.J.S.; and in such cases the odds are usually on the big battalions. Nevertheless, the Douglas is incontestably our revviest engine nowadays, and it has not won a T.T. since 1912. Watch it; but not, I think, too hopefully, considering its small entry.

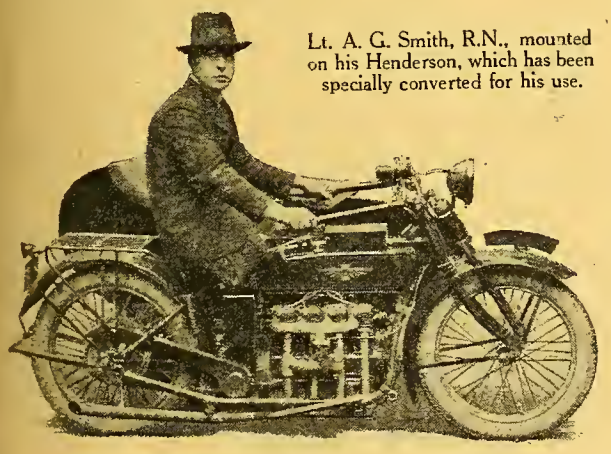
---

# A DISABLED RIDER'S MOUNT.

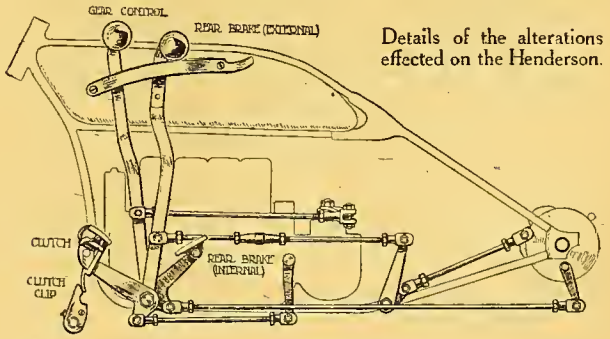
## Transposing Controls on a Four-cylinder Henderson.

THE owner of the Henderson illustrated had his leg completely severed above the knee owing to the breaking of a cable on board one of H.M. ships. Being an enthusiastic motor cyclist he was afraid that he would be able no longer to indulge in his favourite pastime. However, thanks to the ingenuity of Messrs. Robertson's Motors, Ltd., he is not only able to ride but to enjoy thoroughly the possession of the latest model 1922 Henderson.

Following American practice the kick-starter is on the near side of the machine, and this is, of course, an advantage to the owner, but the chief alteration has been in the conversion of the hand lever actuating the clutch in conjunction with the clutch pedal to control the external brake, the lever working in a ratchet so that the machine may be left with the brake on when on a gradient, and the introduction of a clip to the clutch pedal, so as to hold it permanently out of engagement. This clip only comes into action at the bottom of the travel of the pedal, allowing the clutch to be used in the ordinary way for starting and gear changing. If, however, it is intended to hold the clutch out permanently, the foot is firmly pressed down and the clutch is held out.



Lt. A. G. Smith, R.N., mounted on his Henderson, which has been specially converted for his use.

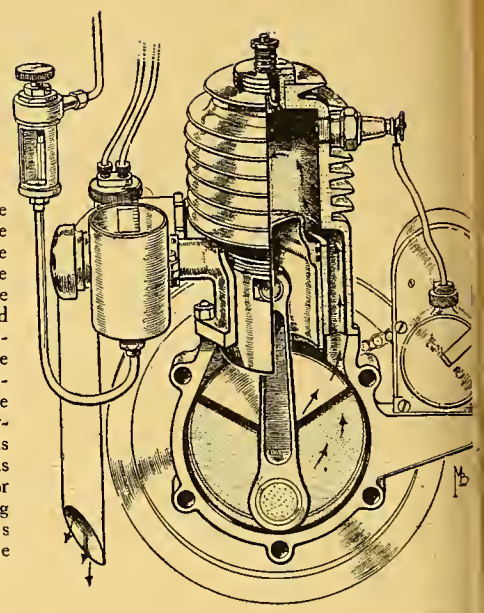


Details of the alterations effected on the Henderson.

Lt. Smith's machine is fitted with a welded luggage carrier, the surface of which consists of flat strips, so that any small parcel can be carried conveniently.

# TWO STROKE ENGINES IN PRACTICE.

## Carburetter and Ignition Adjustments as they Affect Engine Performance on the Road.



A two-stroke engine of the three-port type shown with the piston in the exhaust and transfer position of the cycle of operations. The carburetter arrangement is that which was employed for determining the figures quoted in the article.

MOST average riders are more concerned with what can be got out an engine than with its theoretical thermal efficiency, and knowledge is wanted on how to get the best results. This desire for knowledge is specially manifested by owners of two-stroke machines, and it is the aim of the present writer to deal with a few of the strange problems connected with this increasingly popular type of engine from a practical point of view.

The question of the design of the engine, or the size and location of the ports, is rather outside the scope of these notes, particularly since the rider cannot, as a rule, vary the designer's ideas.

### Importance of Carburation.

The first, and perhaps most important subject is that of carburation. Carburation is a process whereby liquid petrol is converted into petrol vapour, and mixed with the correct quantity of air to form an explosion mixture. The chief difficulty lies in these words, "correct quantity." Too little air, causing a rich mixture, will lead to "four-stroking," and it should be noted that "four-stroking" is invariably due to excess either of oil or petrol. On the other hand, too much air, or a weak mixture, will lead to "spitting back." Consideration of the problems involved i complicated by the fact that there is often a ver narrow margin between "four-stroking" and "spittin back" mixtures (see fig. 1).

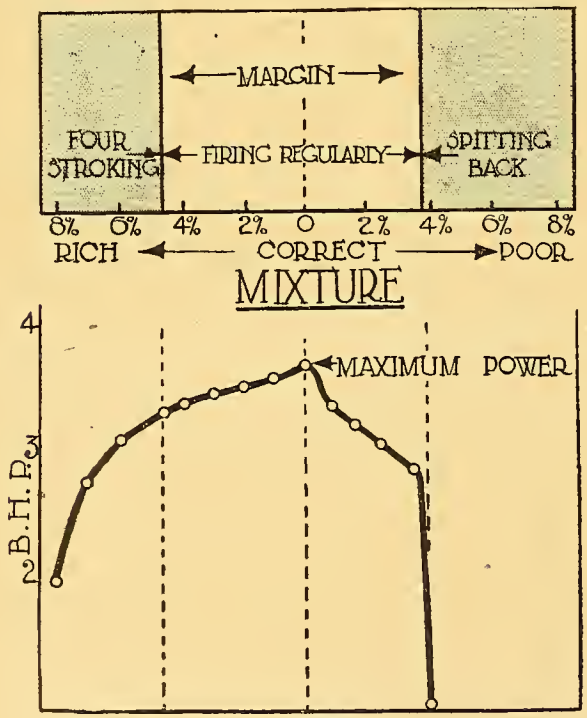


Fig. 1.—Above is shown diagrammatically the effect on the engine's running of weak and rich mixtures. Below is the power curve obtained during the same test.

In obtaining the results on which the diagram i based an experimental air-cooled two-stroke engine o 70 × 76 mm. bore and stroke was mounted on th bench, and arrangements devised for cooling it by a fan, and a Prony type brake was arranged to operate on the rim of the flywheel, so that the brake horse power could be determined.

A well-known make of single jet carburetter wa used, but it was provided with a proprietary variable jet.

The needle valve and float were dispensed with, and petrol was fed to the float chamber through a sight drip feed.

A gauge was fitted to the float chamber with a mark at the correct level—1-16in. below top of jet.

The engine was run up to 2,000 r.p.m. with an approximately correct jet setting; the throttle and air levers were then kept constant and the petrol valve adjusted so that the level in the float chamber was correct and remained steady. The drops were then counted over a period of one minute, and this was taken as 100.

Next the jet was opened slightly, and further adjustment of the petrol valve was made, so that level remained steady, and the drops again counted and expressed as a percentage on the original figure. Various other readings were taken, and in addition the b.h.p. for each setting was determined.

The engine speed, of course, varied, but not more than 10% over the whole range of the test.

### Effect of Rich and Weak Mixtures.

From the diagram it will be seen that, for a mixture 4¾% rich, the engine commenced to four-stroke, and for a mixture 3½% poor, it commenced to "spit back," and stopped at 4% poor.

**Two Stroke Engines in Practice.—**

Thus the comparative narrowness of the margin is seen. The upper part of fig. 1 should be studied in conjunction with the graph in the lower part of the drawing, which gives the b.h.p. at each jet setting. It will be seen the curve slopes more steeply on the poor side than on the rich; thus, a rich mixture, say, 3% rich, will cause less loss of power than a mixture even 2% poor. And, no doubt, the high consumption of some two-strokes is due in part to continually running with a rich mixture. Note, however, that maximum power was obtained for the correct mixture.

The requirements of a two-stroke engine are simple, but often difficult to realise.

It must be remembered that before a start can be made air must be displaced from the induction pipe, crank case, transfer passage, and cylinder, and replaced by explosive mixture.

On a cold morning especially the petrol vapour will condense on the way, and by the time the mixture has reached the cylinder it will be too weak to fire.

### Essential for Easy Starting.

So there must be an excess of petrol to ensure a start in anything like reasonable time. This is requirement one—rich mixture for starting.

For running, however, the mixture should be just right, and remain so for any engine speed.

When dealing with this subject it is only too easy to go off into technicalities, which do not help the average rider much. So we will proceed to see how these requirements can be met in practice.

It may be noted that *any* modern carburetter, if once correctly set, will satisfy these requirements. The difference between the various types is merely typical of efforts to save the rider trouble by giving him one lever to manipulate instead of two and a variable jet, or something of that kind.

Some carburetters, however, especially the automatic variety, are designed to give a fairly correct mixture at all engine speeds; and, if we get one to work within the limits of, say, 2% either way, we shall not be doing badly, and such an instrument would be useful for a novice.

There are many methods of altering mixture strength: Among them we may mention these:

1. Altering jet size.
2. Altering choke-tube size.
3. Altering petrol level.
4. Altering the air supply externally.

Our requirements are: a rich mixture temporarily for starting, and weaker one for running.

The usual method is to flood the carburetter for starting, *i.e.*, to raise the petrol level for a short time. This method is wasteful, and if "petroil" lubrication be used, is filthy. One rider of a well-known make of two-stroke, of 247 c.c. capacity, recently complained to the writer of a consumption of 60 m.p.g. He was a commercial traveller, and often made forty starts per day, flooding violently for each!

Another method, which is rather better, is to cut off most of the main air supply by stuffing a rag into the air inlet, or by using a leather or metal cap over the carburetter inlet; or by a light throttle valve in a piece of thin tubing, replacing the cap.

### Experience Must Guide.

As to the running, it is essential to keep the mixture correct, and to the beginner who asks how one is to tell when it is so, the answer must be "experience," and the answer to the former—well, in most carburetters the air lever gives ample range. But in some it does not, and a variable jet, preferably handle-bar controlled, should be fitted, if possible; indeed, any carburetter is improved by such a fitment. Only three positions are needed—one rich for starting, normal for running, and rather weak for downhill work.

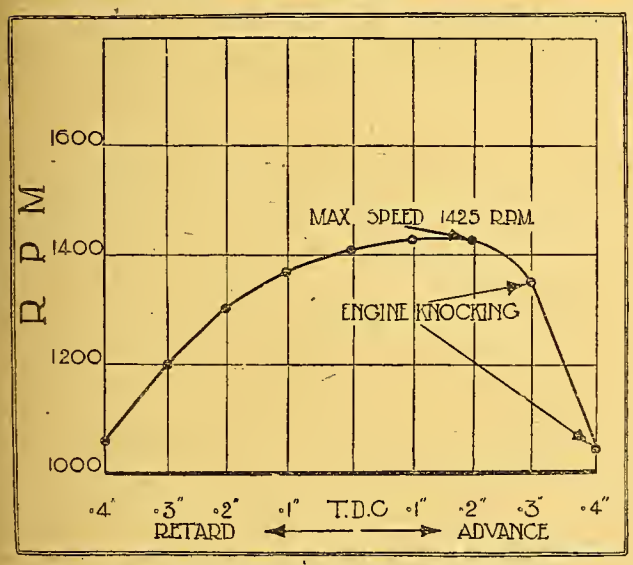

Fig. 2.—Demonstrating the effect on engine speed obtained by progressively advancing the firing point from 0·4in. late to 0·3in. early; the engine running light on a fixed throttle opening.

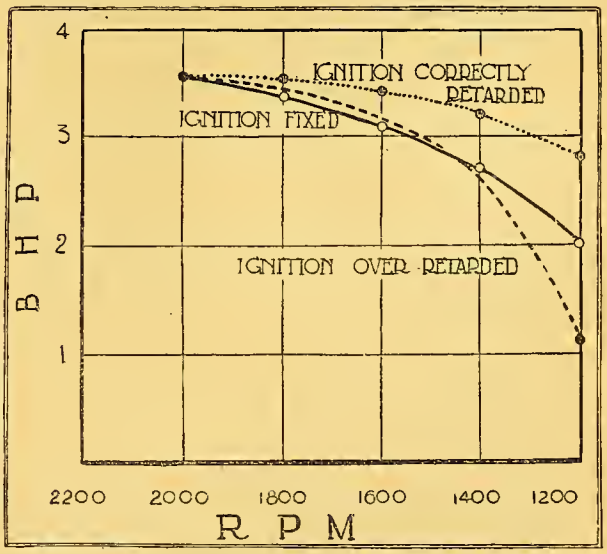

Fig. 3.—When hill-climbing on a fixed carburetter setting it is necessary to retard the spark as the speed falls off; this diagram shows how the engine power is affected by ignition control under a test bench reproduction of climbing conditions.

**Two Stroke Engines in Practice.—**

An intelligent use of the jet and air lever will do a great deal towards getting the best results on the road.

### Ignition and Its Effect.

Spark timing has considerable bearing on the satisfactory working of two-stroke engines, which are extremely sensitive to minute variations.

A two-stroke engine requires one spark per revolution, and the usual practice is to drive the magneto at engine speed (as compared with half-engine speed in most four-strokes), and thus a smaller and lighter type of magneto may be utilised.

The speed of the magneto also tends to give easy starting, and good slow running, and so the magneto should not be immediately blamed if these conditions are absent. When dealing with magnetos, "leave well alone" is a good motto, unless there is something obviously wrong.

There is no need to go into the question of the design of the magneto, or its working, as there are many text-books which explain all this.

### Care of the Magneto.

There is, moreover, no special point to be emphasised in the upkeep of the magneto. Lubrication is usually effected by grease packed in the housing of the ball bearings, which will last for some twenty to thirty thousand miles. At the end of this period the grease may be replaced if necessary; and the correct grease to use is purest vaseline, which should be chemically neutral, free from water, and contain no grit.

The magnets of modern magnetos do not lose magnetism after many years' running, thanks to the tungsten and other alloy steels which have been specially introduced.

Any trouble with dirty points is invariably due to a faulty condenser, or to over-lubrication; the latter is not likely to occur unless oil is added by the rider in large quantities.

### Sparking Plugs.

In some two-stroke engines a suitable plug is very hard to find. It has been noted that a two-stroke engine tends to run hotter than a four-stroke, and it is this point which causes most of the minor troubles connected with sparking plugs.

If the plug has thin points, or electrodes, they very soon get white-hot, and fire the charge long before the proper moment—and it should be remembered that the plug has only half the time to cool in a two-stroke that it has in a four-stroke.

On the other hand, if the electrodes are heavy, and thick, they keep cool; but if there is any excess of oil present in the cylinder the plug becomes "oiled up" and useless.

No two makes of engine are alike in their preference for a plug.

There are some in which any type of plug may be used, notably the Scott (water-cooled). But there are others in which only one type of plug will give satisfaction, and this must be found by experiment, and, possibly, expensive trials. The makers do not always send out the best type of plug with the machine—the writer has personally experienced two cases of this. In one case, the plug ran thirty miles, and in the other eighteen miles before giving up the ghost.

Plugs of the non-detachable type are best avoided.

### Timing the Spark.

The average two-stroke is extremely sensitive to the timing of the spark, and usually can be timed rather earlier than in four-stroke practice. The best all-round setting is: Piston on top dead centre; spark fully retarded; points just open.

For low engine speeds, the spark can be kept pretty well retarded, and for fast work should be advanced. A two-stroke magneto should have as wide a range as practicable. There was a time when many single-speed two-stroke machines were sent out with fixed ignition! The makers have learnt better now.

### Advantages of Wide Ignition Range.

The results of some further experiments with the air-cooled engine referred to earlier will no doubt prove of interest as to this point.

A special arrangement was devised whereby the spark could be varied over a wide range, without vitiating its strength to any serious degree; this involved the use of two magnetos, which, by a high-tension distributer, could be connected to the plug at will.

Fig. 2 shows the effect of variation of timing on engine speed when running light, and speaks for itself. The throttle opening was constant during this experiment.

In diagram 3 the results of a further experiment are shown. Unfortunately, it was not found possible to get a series of consistent readings for this test; however, a general idea is given. The ignition was kept constant at 0.2in. advanced, *i.e.*, before t.d.c. The engine was run up to 2,000 revs. with a light load on the brake.

The b.h.p. was determined; and the load then increased, so that the engine speed dropped, the throttle opening being constant. The b.h.p. was found to be less, and kept on decreasing as the load was increased, and engine speed dropped (see full line, fig. 3.).

### Retarding Spark on Hills.

The test was then repeated, but as the load was increased the spark was gradually retarded to 0.2in. after t.d.c. at the end of the test. It will be seen that the power curve did not drop to anything like the same extent (as dotted line).

Unfortunately, owing to trouble with undue heating of the brake at the heavier loads, the test had to be abandoned for the time being.

It will thus be seen why retarding the spark on a hill is beneficial to the engine (both in a two-stroke and four-stroke), and the writer has not seen this graphically explained elsewhere, though, of course, it may be. The average rider retards his spark on a hill from habit more than anything else, but if he retards it too far he may find himself as bad, or worse than, before. The heavy dotted line shows the effect of over-retarding the spark under the same conditions.

GEO. F. JONES.

# In the Doone Country.

The Castle Rock, which dominates this end of the Valley of Rocks; the far side is a sheer cliff some three hundred feet high.

## A Romantic District Embracing both Coastal and Inland Scenery of the Most Attractive Nature.

BEGGAR'S ROOST and the hamlet at its foot, Barbrook Mill, have loomed large in the pages of *The Motor Cycle* of late; the inclusion of his hill in the London-Land's End Trial of Easter ast gave this charming corner of North Devon much ree advertisement.

Lovers of Exmoor, who know their "Lorna Doone," ill remember that Jan Ridd and Uncle Reuben rode *ia* "Brendontown, Illford Bridge, and Babbrook, o avoid the great hill at Lynmouth."

"Illford Bridge" is known now as Hillsford Bridge, on the Watersmeet Road out of Lynmouth, nd the "Babbrook" mentioned by Blackmore is the luster of cottages on the turbulent brook at the foot f Beggar's Roost Hill, now named Barbrook Mill.

Jan and his uncle were going this way to "Ley Manor," now known as Lee Abbey—a private board-ng establishment in these days, but then the mansion f the Baron de Whichehalse—their purpose being 'to lay an information, and sue a warrant against he Doones, and a posse to execute it."

### Worthy of a Visit.

Lee Abbey is situated, delightfully, on the coast ear the end of the Valley of Rocks, though there s no thoroughfare for motors beyond the lodge at the nd of the valley road; in spite of this it is a romantic pot well worth a deviation from Lynton.

The curious rock formations in the valley are well lescribed by Blackmore—"at the right hand is an pward crag, called by some the 'Castle,' easy enough o scale, and giving great view of the Channel. Facing this from the inland side and the elbow of the valley, a queer old pile of rock arises, bold behind one another and quite enough to affright a man, if it only were ten times larger; this is called the Devil's Cheese Ring."

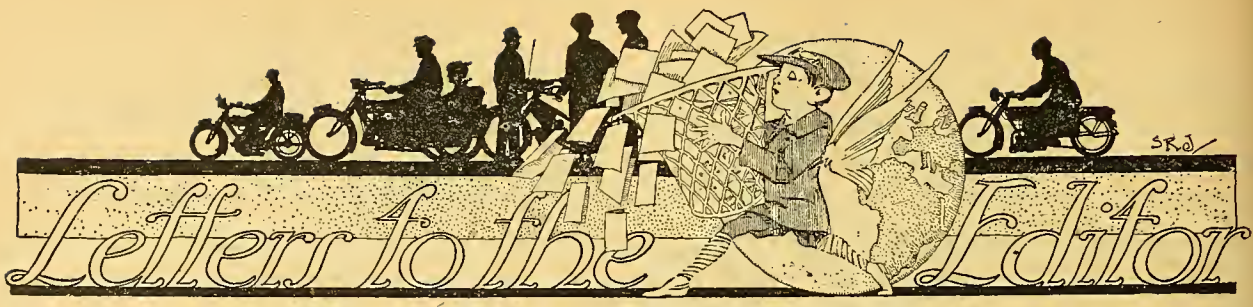
### Within the Devil's Cheese Ring.

Here it was that Jan Ridd went in fear and trembling to visit old Mother Melldrum, "a certain wise woman" who "kept her winter in this vale of rocks within the Devil's Cheese Ring"; Jan went from the Doone valley, through Lynmouth, on foot, for fear she should cast a spell on his horse if he rode; one can only conjecture what would have happened could he have ridden a motor cycle. Whilst there, seeking the witch's advice anent Lorna Doone, he saw a "black he goat" disputing possession of the crag. Castle Rock, with "a fine fat sheep"; Jan made a great attempt to save the sheep, but as he reached them the goat hurled the sheep over the cliff to the wave-washed rocks below; Jan was so enraged that he seized the goat by its hind legs and threw it after its victim.

Whether the many entrancing pages written by Blackmore around this beautiful corner of Devon are founded on fact, or, as seems more probable, merely the product of a lively imagination, captivated with the romantic spirit of the Doone country, matters little nowadays; it is taken for granted by the majority of tourists who love the book, whether true or not.

For a short motor cycling holiday, in spite of the big hills, a visit to this district, to seek out the scenes of the history of "Gert Jan" and "Lorna," is hard to beat.

WESTERNER.



The Editor does not hold himself responsible for the opinions of his correspondents.

**Correspondence should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, E.C.4, and must be accompanied by the writer's name and address.**

### *IS TOWING ILLEGAL?*

Sir,—Seeing the letter of Mr. G. A. Weatherill *re* trailers, I think it is up to all motorists to get the proposed regulation altered, whether it applies to them or not. Stopping a trailer being used on a motor cycle is taking away a certain amount of freedom which we have. I do not know of any other vehicle which is not allowed on the road. The next thing might be the prohibition of sidecars!

Under that regulation, too, I suppose no motor cycle would be allowed to tow a machine, which, when attached in that manner, would become a trailer.

P. S. COLLYER.

### *"COOLING TOWERS."*

Sir,—Referring to the numerous finned air-cooled valve caps now on the market, I note that, as yet, they have not a generally accepted name.

In view of this I beg to suggest the term "cooling towers." I think that this is appropriate in that most of these appliances are made in the form of a miniature "tower" of radiating fins. C. F. CAUNTER.

### *EQUITABLE INSURANCE.*

Sir,—With regard to the question of insurance, I consider that a 10 per cent. rebate is ridiculously inadequate in the case of an experienced rider who has been insured for years, and who has in that time made no claim.

Ten per cent. less than the last renewal would be far more equitable. Thus, for a policy originally £10, the renewals would be £9, £8 2s., £7 6s. for subsequent years.

This takes account of the driver's previous history—he is judged by results.

Also, as the effect of this system would be cumulative, it would afford every encouragement to the motorist to keep a "clean sheet." REVS.

Glasgow.

### *INACCESSIBLE DRIVING CHAINS.*

Sir,—At least 75 per cent. of the sidecar outfits on the road carry the rear driving chain between the cycle and sidecar.

Can a fellow-reader kindly give an explanation of this practice?

Surely it is enough to repair a broken chain on the offside of the machine, without being compelled to squeeze between the sidecar and the machine? A. M. KNIGHT.

### *SALT'S ACTION ON ENAMEL.*

Sir,—It may interest you and your readers to know that it is not necessary to go to East London, South Africa (page 588), to find streets watered with salt water.

There are salt water mains in the streets of Blackpool, Lancashire, and this water has for over twenty years been used for watering the streets of the town. I have never heard of any complaints about the effect on enamelling, but the fact remains that the enamel on the mudguards of my 1921 machine is already in a parlous state, peeling off in big patches. However, I do not attribute this to the salt water on the streets—it leaves a slight white deposit on the road surface—but to the fact that I believe the mudguards were enamelled when damp. There is rust under the enamel.

Blackpool. FR 3128.

### *WHAT IT COSTS.*

Sir,—Possibly some figures relating to the running costs of a moderately old machine may be of interest.

The outfit is a 4¼ h.p. Model K 1916 B.S.A., with Canoelet sidecar, bought new in October, 1916, and since driven only by myself. No record was kept during the years 1917 and 1918, during which the mileage amounted to 3,800 miles.

| | 1919. | 1920. | 1921. |
|---|---|---|---|
| Petrol | £6 4 8 | £5 14 9 | £4 5 3 |
| Oil | 2 0 0 | 2 6 8 | 2 17 5 |
| Repairs | 3 8 6 | 2 15 0 | 4 7 0 |
| Spare Parts | 2 0 2 | 2 0 11 | 6 2 4 |
| Tyres and Belts | 13 1 6 | 7 2 7 | 7 1 9 |
| Licences, Insurance | 5 11 0 | 5 5 2 | 10 2 6 |
| Improvements, etc. | 2 0 0 | 2 14 0 | 4 1 6 |
| Miscellaneous | 2 17 5 | 1 15 0 | 3 9 0 |
| Total Cost per Annum | £37 3 3 | £29 14 1 | £42 6 9 |
| Miles run | 3,253 | 3,293 | 2,764 |
| Cost per Mile | 2¾d. | 2¼d. | 3½d. |
| Gallons Petrol Used | 41 | 44 | 39 |
| M.P.G. Petrol | 79 | 75 | 71 |

"Petrol" includes all used for cleaning (rather lavish) and general uses. "Miscellaneous" includes special clothing, garaging on tour, &c. Each year's mileage includes about 1,500 miles of serious touring, extending over about three weeks in hilly country with sidecar and passenger; the rest short runs, 80 per cent. with sidecar. K.B.1112.

Liverpool.

Sir,—Perhaps the following running costs may be of interest to your readers:—

Machine, 8 h.p. Sports Zenith, delivered August 4th, 1920.

| | | | |
|---|---|---|---|
| First cost | £139 | 0 | 0 |
| Present estimated value | 90 | 0 | 0 |
| Depreciation | £49 | 0 | 0 |
| Lamps and Horn | 4 | 5 | 0 |
| Licences | 8 | 5 | 0 |
| 127¼ gallons Petrol | 19 | 15 | 10½ |
| Belts | 6 | 15 | 0 |
| Tyres | 6 | 12 | 2 |
| Maker's Engine Overhaul | 2 | 17 | 4 including carriage |
| 8¾ Gallons Lubricating Oil | 3 | 18 | 1 |
| Sundries | 0 | 16 | 7 |
| Police | 0 | 2 | 6 |
| | £102 | 7 | 6½ |

Mileage=10,968, or 2¼d. per mile, all in.

FRANK G. HOWARD.

Sir,—The following is an actual brief account for running a 2¼ h.p. two-stroke single-geared lightweight for one year:—

| | £ | s. | d. |
|---|---|---|---|
| Tax on motor cycle | 1 | 10 | 0 |
| Driving Licence | 0 | 5 | 0 |
| Insurance (3rd party, fire, and theft for 2 drivers) | 3 | 4 | 0 |
| Petrol, 5 gallons at 3s. 6d. | 0 | 17 | 6 |
| Petrol, 11 gallons at 3s. | 1 | 13 | 0 |
| Petrol, 26 gallons at 2s. 6d. | 3 | 5 | 0 |
| Oil (2¼ gallons) | 1 | 0 | 7 |
| Two belts and fasteners | 1 | 9 | 6 |
| Tyre and tube | 2 | 14 | 0 |
| Spare parts, repairs, etc. | 5 | 2 | 2½ |
| Total Cost | £21 | 0 | 9½ |

Approximate mileage, 4,000. Cost per mile, 1¼d. A.B.

Leeds.

### SUPERFLUOUS FORK SPRINGS!

Sir,—It may interest your readers to know that I have ridden my N.U.T. a good thousand miles with both springs broken.

One of them cracked as the result of an accident just outside Paris, and while the machine was being straightened out some small boys drew my attention to the fact. I certainly was rather worried as to what might happen if it broke, and it was very likely to do so. Spares could not be obtained there, so I carried on with the original intention of finishing my tour to the south of France. It was not long before it did break, but it did not matter, and a few miles further on the other broke in sympathy.

I arrived home without any more trouble, and it was some two or three weeks before I could get fresh springs from the makers. L. ERNEST H. HILL.

### TEMPERAMENTAL ENGINES.

Sir,—In regard to the several letters complaining of sluggishness in running, and at times the engine going "mad," perhaps my experience of an elusive trouble and its disappearance may be of value. In a piston the vertical side at the top of it should be turned a shade less than that between the rings, and also of the skirt. Some pistons are turned a little less than they should be to allow for expansion under heat of the cylinder head, and the result is that when the piston gets a particular heat, which varies in different cylinders, this becomes tight, yet the oil does not allow it to seize. I always like to see the piston, from the top edge of the top ring to the top of the cylinder head, black: where one can see that the combustion reaches it, and there is no valid reason why it should touch the sides of the cylinder wall at all. I should be very glad to hear if our correspondents find that this is the cause of their trouble. VERITAS.

Wallasey.

Sir,—I had a 1913 single-cylinder 3-speed James outfit which once "went mad" in a hilly district. It began roaring up hills on top which should have required middle gear after the initial rush. After a few miles of this I spotted the cause—an unscrewed float chamber top, which permitted flooding (B. and B. old bottom-feed type).

I think some of the symptoms so far described are traceable to a petrol level which is temporarily either higher or lower than normal. Experiments with a glass float chamber in a bench test might show that some carburetter needle valves only pass sufficient petrol when the level is considerably lowered. Excessive road vibration is a disturbing factor: so also is stiffness in the working of the needle valve, and a ledge on which it may stick.

W. R. DEUCHAR.

Sir,—Although utterly ignorant of any deeply technical part of motor cycling, might I traverse on your valuable space to suggest that inequalities of road surface temporarily upset the petrol level in the carburetter, thus altering the mixture and accounting for the sudden increase in power noticed by your correspondents who write under the heading of "Temperamental Engines." I have a 1912 Triumph, and my experience is exactly the opposite. Above 20 m.p.h. it runs with the utmost regularity; however, when throttled down to fifteen, the exhaust note suddenly changes, the speed drops to ten, and the engine seems to pull with far less exertion than at the higher speed.

C. W. HUCKS.

Sir,—While riding my A.B.C. I suddenly found myself slowing, so opened the throttle to keep up my previous rate of travel. After proceeding quite happily in this manner for some distance, thinking that a head wind had been responsible for the previous slowing down, without a warning I suddenly began to "chase the horizon."

On examination I found a piece of fluff in the petrol pipe.

Doncaster. HORIZON CHASER.

Sir,—"MX 599" states that after descending moderately steep hills (using air brake) he is agreeably surprised at the marked increase in power upon re-opening the throttle. This increase in power, however, is only maintained for about 200 yards, when the engine assumes its "old self" again. Now, this is not such a curious phenomenon as "MX 599" imagines, but is the natural result of practical conditions prevailing at the time. The solution is this, that, after coasting downhill with "air brake" in operation, the piston is cooled—so guarding against contortion. The inert gas is cleared out of the clearance space, which provides for better combustion. Thus, you have an engine running under high ideal conditions—for a period as long as it takes to say— "JACK ROBINSON."

Coventry.

### MOTOR CYCLE TAXATION.

Sir,—Through the medium of *The Motor Cycle*, I desire to draw attention to the injustice of the present basis of motor taxation.

The motor tax was instituted for the repair and upkeep of the roads, but under the present system those who use and wear the roads most (in proportion) pay the least.

The owner of a 4 h.p. cycle and sidecar (tax £4), using his outfit for early-closing days and occasional week-ends (mileage per year, say, 3,000), is penalised as compared with another user, travelling 10,000 to 50,000 miles per annum, and this applies to all users of the road, whether cars or cycles.

The motor associations might take up this question. If they were more militant in regard to the iniquity of this motor tax they would regain many of their lost members, of whom your humble servant is one. LLOYD PITNEY.

Sir,—There are many motor cyclists to-day who cannot afford to pay the year's tax down, so are forced to pay by the quarterly system.

Now, by doing this the Government takes the liberty of making these cyclists, who are not over-run with wealth, pay more, whereas the man who has capital gets his licence cheaper by taking the full year.

Again, I feel that pedal cycles should be taxed 5s. per year. Why should they have the free use of the road?

G. J. HICKLING.

Sir,—Can nothing be done to abolish the highly unfair method of taxation on motor cycles?

I have just taken out my licence until the end of the year and find that I have to pay the same (£3) as if I had taken it out on January 1st. F. FAIRBAIRN.

OUR ENTHUSIASTIC READERS. Some time ago there was published under "Summary of Correspondence" a three line request of Mr. G. Emmanuel for information as to the postal address of a way-side temperance hotel in Wales which he had visited previously. Dozens of readers volunteered information, which was forwarded to the enquirer, and now two correspondents on an Easter tour made a special stop for photographs, "in the hope," they say, "of setting Mr. Emmanuel's mind at rest." The address of the house is: Minffordd Temperance, Talyllyn, near Corris S.O., Merionethshire.

Sir,—So much has been said against the present system of motor cycle taxation that perhaps a word in its favour might come as a welcome change.

After careful calculation it appears that if a rider of a lightweight exceeds 2,000 miles in the year, averaging, say, 100 m.p.g., he actually pays more under the old system—£1 Post Office duty and 6d. per gallon tax on petrol—than under the present scheme.

With regard to a heavyweight solo machine and a sidecar outfit, averaging, say, 75 and 50 m.p.g. respectively, the mileage to be covered to equalise the amounts paid under the old and new systems works out at 3,000 miles per year.

I would venture to suggest that the vast majority of motor cyclists easily cover these fairly moderate mileages in the course of a year, and if the tax suits the majority, why the immediate necessity to have it altered? TAXI.

Kidderminster.

### 'BUS INSPECTORS' SIDECARS.

Sir,—Mr. C. H. Stephenson criticises the alignment of the B.S.A. outfits used by the inspectors of the Bristol Tramways and Carriage Co., Ltd., which he saw when passing down west at Easter.

As the author of the article dealing with their work, which appeared in your issue of March 30th last, I must take the liberty of differing on this point; I have inspected this fleet of sidecars quite recently, have travelled as passenger in one of them, and see them almost every day, and I can only suggest that he must have seen one on a heavily cambered road, which frequently gives the impression of bad alignment. Certainly there is no visible fault in the alignment of these vehicles, they are too well looked after to permit careless treatment of that sort; further, the exceptional tyre mileage of these outfits, a fact commented on by "Ixion" in the issue of the 4th, is sufficient proof that there is little wrong with the alignment. WESTERNER.

Bristol.

### TUNING A 4-H.P. TRIUMPH.

Sir,—With reference to the remarks of "Arieumph," I think it would be much more to the point if correspondents when writing on this subject would qualify their statements by giving full particulars of the performance of their cycle or engine before and after modifications have been carried out, with gear ratio and any other particulars likely to be of general interest. To merely inform all and sundry that motor cycle X.Y.Z. lapped Brooklands at 60 m.p.h. does not prove anything; in my opinion, any 4 h.p. motor cycle geared to suit the engine's h.p. curve should reach the above figure.

The article by Mr. K. H. Leech appeared to me to be written primarily for 4 h.p. Triumph sidecar owners, and described the methods adopted by the author to improve the engine's power curve. In this connection I would like to state that I have just completed a set of cams on the lines described by Mr. Leech, and fitted them to my 1916 4 h.p. Triumph sidecar outfit; no other modifications of any description have been introduced.

The results substantiate the statements made by Mr. Leech at various times to a remarkable degree. To sum up, the benefits obtained are as follows:—

*Slow Running.*—Engine will tick over at from 120 to 150 runs per min. when running free.

*Flexibility.*—Engine will pull a loaded sidecar at any speed down to about 8 m.p.h. without snatch, knocking, or pinking.

*Acceleration.*—All that can be desired.

*Consumption.*—Appears to be the same as heretofore, *i.e.*, about 75 to 80 miles per gallon, according to speed, district, and load.

*Power.*—In this connection the benefits must be experienced to be believed. Hills that have in the past necessitated second gear are now romped over in top gear, and the power at all speeds is considerably more than before the alteration. The engine appears to run cooler at ordinary touring speeds, and I no longer listen for knocking and pinking when opened out to about 35 m.p.h.; in fact, knocking is conspicuous by its absence.

In conclusion, I have no hesitation in thoroughly recommending this modification to those possessing the necessary theoretical and practical mechanical skill to carry out the alterations successfully.

My methods differed considerably from those described by Mr. Leech, but that is by the way; finally, I should like to tender my thanks to Mr. Leech, and to *The Motor Cycle* for publishing such an instructive article.

Portsmouth. A.M.I.Mech.E.

### ELECTRICAL TIMING.

Sir,—Of special interest to myself and many others in motor cycle club life are the different methods employed in the electrical timing of speed events, hill-climbs, etc. I have seen numerous methods of electrical timing in operation, but none reliable which the human element does not enter into. Take, for an instance, a stop-watch actuated at the finishing point by an electro-magnet, which is controlled at the starting point by button or road contact, and at the finish by closing the circuit when the cotton is broken. The pressure required to start and stop the watch; the time lost in operating electro-magnet from the start, even though a compensation battery is used; and the condition of the watch after it has been in use half an hour, all have to be taken into consideration, and do not tend to give accuracy in timing, and a stop-watch is a delicate and sensitive instrument.

To my mind, the best effort that has been advanced up to the present is the electrical chronograph, used at Brooklands, giving us the time in twentieths of seconds, but I fail to see why the apparatus should be operated by hand, even though they be the hands of A.C.U. experts. I submit it has been proved that it takes one-twentieth of a second for the brain to deliver to the hand; thus, we actually lose one-twentieth before the starter has touched the button. Further, I submit that it takes another four-twentieths of a second before the chronograph actually starts to register. Thus, we are one-fourth of a second out in starting, and if this be a flying start, I venture to state the rider is from ten to twenty yards over the line before the graph commences. The same adjustment in time also applies to the finishing point. To argue it is the same for everyone is getting away from facts. The condition of the timekeeper's brain is not always the same.

No doubt there is great difficulty in laying contact strips for short distances on Brooklands, but, unless they rule out the human element altogether in timing, they must always be open to severe criticism. G. C. ASHBY.

### FREAK GEARS ON A TOURIST'S MACHINE.

Sir,—I noted with interest "A.E.M.'s" complaint about his gear ratios, as my machine has the same defect.

When I chose the Martinsyde I did not inquire what the ratios were, for the machine was so well designed and finished that I took it for granted that they would be suitable. It is incomprehensible to me that a man who could design a masterpiece like the Martinsyde, showing as much care in its construction, and more thought in its design, than a Rolls-Royce car, could fit it with a second gear on which it can attain little over a quarter of its maximum speed.

However, I don't think the designer is the culprit, but the trials' organisers who send their riders through ditches and up banks instead of giving them a chance to demonstrate the utility, economy, and handiness of their mounts.

Kent. JAY CAI SEE.

## T.T. AND 1,001st NUMBER.

**Next week "The Motor Cycle" will celebrate its 1,001st consecutive issue. Twenty years ago, when this journal was first published, the motor cycle movement was only just developing. The 1,001st issue of "The Motor Cycle" will contain many special articles and illustrations of exceptional historical interest; and, appearing on the date of the Senior Tourist Trophy event, particulars of the T.T. Races in the Isle of Man will form a feature.**

***Orders for copies of this enlarged issue should be placed in good time—Fourpence as usual.***

### DOUBLE POLE PLUGS.

Sir,—With reference to Mr. H. Mortimer Batten's article on double-pole plugs in Scott machines, I should like to say that I have tried Lodge double-pole plugs on my 1920 Scott outfit, which certainly improved the running in all respects as well as petrol consumption. However, my porcelains and plug points gave up the ghost at 300 miles, which was the cause of my reverting to single plugs.

J. W. CLAMP.

### "THIS IS PERFECTLY TRUE."

Sir,—A few weeks ago a friend of mine made the journey from a Kentish village to Chester, a distance of about 225 miles, on a Baby Triumph. He had to catch the Holyhead train at Chester, and to do this he made an almost non-stop journey. He did not alight for refreshment of any description, and as he neglected to take goggles his eyes were bloodshot, his face was filthy with dust, and, being half asleep, he looked rather a sorry object. Eventually he stopped to enquire how much farther he had to travel. The woman from whom he enquired replied: "Well, as far as I know, it's about eighty miles; *but if you have many more* you won't get there at all."

This is perfectly true. ALAN ARTHUR.

### IRISH TRIALS.

Sir,—I note in your issue of the 4th inst., reporting the Dublin M.C.C. hill-climb on the 29th ultimo, you go on to say that "despite the political situation the Dublin Club continues to hold successful and well supported events, although some of the longer distance trials have had to be abandoned this year." In reply I beg to say that this is not quite correct, as none of our long distance trials have yet been abandoned, nor do we intend to do so. Our principal trials, such as the Irish Open 24 hours' Trial, in June, will be held, but the course slightly altered from the original, so as to obviate at night the necessity of crossing from the "Free State" border to that of "Northern Ireland." We also intend to hold our Two Days' Trial in August to Glengariffe and back.

WM. H. FREEMAN,
Hon. Sec.

### SPEED VARIATIONS ON THE T.T. COURSE.

Sir,—Ixion, in an article in *The Motor Cycle*, dated June 23rd, 1921, wished that some first-class rider would do a lap of the Manx course with a recording speedometer fitted giving a graph of his speed variations. May I echo this wish? Will somebody please carry out this stunt this year? A. A. W.

### THE A.C.U. CONTROL OF TRIALS.

Sir,—My attention has been called to the letter in *The Motor Cycle* for May 18th over the signature of my friend Mr. K. S. Topping, on the subject of reliability trials.

It is quite true that at the next meeting of the Competitions Committee of the A.C.U., the question of some kind of control being taken by the Union over *open* reliability trials will be considered as the result of a proposal I made before the General Committee of the Union, on the subject, being referred to the Competitions Committee. An almost unanimous vote was carried in favour of the subject being thoroughly gone into by this Committee. I fully appreciate most of the points in Mr. Topping's letter, though I must say I am afraid he has missed the mark in some of his insinuations.

My whole object in bringing this matter forward is in order to safeguard the future of competitions in the hands of local Centres of the Union, and here I may mention that being Chairman of the Midland Centre I have the interest of this centre, at least, at heart, as will be readily understood, though motor cyclists in other centres, not knowing me, might not appreciate this fact after having read Mr. Topping's letter.

In my opinion, the question needs very careful consideration for the following reasons:—

(1) Open trials are held "under the auspices of the Auto-Cycle Union," and as such the Union is, or should be, responsible for the proper conduct of such trials.

(2) Open trials in which freak gradients and freak surfaces are included—Mr. Topping knows the sort I refer to—are liable to result in all trials, whether open or otherwise, being looked upon as a farce.

(3) Genuine amateurs will not, or cannot afford to, enter trials in which these freak tests occur, for fear of damage to their machines, even if it were possible to sort out the amateurs and the trade riders, which in my opinion it is not.

(4) The majority of entrants in open trials are trade riders, for the reason given in (3). The trade is becoming tired of freak tests and may refuse to enter trials of any kind unless it is protected by someone obviously the Union, against being called upon to submit to such tests, without any prior warning. If protection is given then trials organisers generally can be assured of good entries, though such protection need not mean the elimination of really stiff gradients and other severe tests which will help to improve the breed of the motor cycle for the benefit of the average motor cyclist.

(5) Accidents have happened as the result of inclusion of freak tests, or the use of dangerous hills, and the Union, as the parent body, is responsible, and may some day be called upon to carry this responsibility.

(6) If the Union is to control the sport—and all sport is controlled by some body or other, from football to horse racing or pigeon flying—though such control need not be grandmotherly or repressive, it must have some say in the matter of arranging the course.

I could give many more reasons, but I hope these will suffice to show that there are real reasons why the Union should exercise its right in these matters, particularly in the case of centres which are not over-experienced in the organisation of open trials.

I do not suggest for one moment that a trial such as that which the Yorkshire Centre will shortly run off should be restricted in any way by the Union—except where there is real danger to competitors or other road users, and here undoubtedly it is the duty of the Union, as a national organisation, to step in if necessary—providing that it is announced beforehand that the trial will include "Colonial sections" or the like, as riders will then please themselves as to whether they enter or not, knowing what they are likely to be up against.

My whole object in bringing the matter forward is to prevent the possibility of all trials becoming taboo by both trade and private riders on account of their being too "freakish," a tendency which becomes more and more pronounced each year. Ordinary club trials are not in question at all, but if open trials are to receive the support in the future which they have received in the past they will have to be run on proper lines or they will soon be a thing of the past, and it is up to the A.C.U. to see that this possibility does not go any further.

There is plenty of scope for purely sporting trials, up house-sides if you will, as club events, and by becoming a member of a club, usually by paying a small subscription, all and sundry, trade or private riders, can participate, and there need be no interference from the Union, except where the Union feels that it should use its guiding influence in the case of a club organising a trial which will possibly bring about police activity, or in some manner bring discredit on the sport.

Apologising for the length of this letter.

R. VERNON C. BROOK,
Chairman, Midland Centre Auto-Cycle Union
Member Competitions Committee, Auto-Cycle Union.

## Books & Maps for Motor Cyclists.

Issued in conjunction with *The Motor Cycle*.

**"MOTOR CYCLES AND HOW TO MANAGE THEM."**
The standard handbook on the motor cycle.
Price net, 2/6. By post, 2/10.

**"HINTS AND TIPS FOR MOTOR CYCLISTS."**
Eighth Edition. Price net, 2/-. By post, 2/3.

**"TRACING MOTOR CYCLE TROUBLES."**
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.
Price net, 2/-. By post, 2/3.

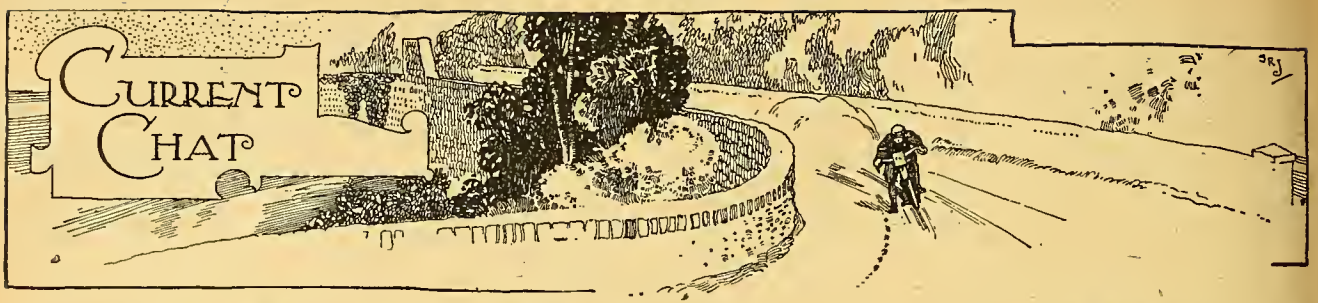
**"TWO-STROKE MOTOR CYCLES."**
A reliable treatise on Two-strokes, from the rider's point of view. Price net, 3/-. By post, 3/3.

**"MOTOR CYCLE REMINISCENCES."**
By "Ixion," of *The Motor Cycle*.
Cloth Bound. Price, 5/-. By post, 5/3.
Paper Boards. Price, 2/6. By post, 2/9.

**"THE MOTOR CYCLE" ROAD MAPS.**
**Set of Three Maps—England and Wales, Scotland, London.** Set of three, complete in case. Price net, 5/6. Book post, 5/10. **Set of Two Maps—England and Wales, London.** Price net, 4/6. By post, 4/8.

**"THE MOTOR CYCLE" ROUTE BOOK.**
With 32 pages of Road Maps. Price net, 2/6. By post, 2/10.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., Dorset House, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.



## Times to Light Lamps.

| | | |
|---|---|---|
| May 25th | .. .. | 9.56 p.m. |
| „ 27th | .. .. | 9.59 „ |
| „ 29th | .. .. | 10 1 „ |
| „ 31st | .. .. | 10 3 „ |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### No. 1,000.

This is the 1000th issue of *The Motor Cycle*. Next week's Special Number will contain many articles of historical value.

### The Second 500 Miles Race.

Every endeavour has been made to secure all classes finishing together in the 1922 500 miles race, which will probably be about 6 p.m.

### Club Championship for 1922.

Entries close on June 10th for the M.C.C. Team Trial for *The Motor Cycle* Challenge Cup. This event will be run off on Saturday, June 24th. Further details will be published in due course.

### Sidecar Trailers.

Many readers have written protesting against the recommendations that trailers towed by sidecar be disallowed. Considering the comparatively few trailers in use with sidecars it is rather surprising that the committee concerned mentioned them at all.

### More Norton Records.

On the 10th inst. R. N. Judd and D. R. O'Donovan, taking turns in riding, succeeded in considerably adding to the many successes gained by the Norton. In 3 hours they covered 192 miles 1,574 yards in 4 hours 256 miles 1,668 yards. They also gained the 200 miles record in 3 hours 6 min. 26.60 sec. The average speed was 64.36 m.p.h. Further performances were prevented by the breaking of an exhaust cam spindle.

### Exhaust Pipe Design.

We have on several occasions commented upon the risks run by motor cyclists who carry silencers which are not in accordance with the law. The other evening we noticed a 2¾ h.p. Douglas with a carefully designed exhaust system, which was by no means standard. Ordinary diameter pipes of burnished copper led from the exhaust ports to two separate chambers with bell-shaped mouths, and open ends of much larger diameter. Such an arrangement was no silencer at all, but might more aptly be called "a megaphone."

### Nortons on the Continent.

In addition to entering for the Grand Prix at Strasbourg, on July 12th, four Nortons have been entered in the 500 c.c. class in the Belgian Grand Prix, a most sporting little event to be held near Spa on July 23rd.

### Staff Machine Stolen.

On Thursday (11th) an o.h.v. Triumph, belonging to a member of *The Motor Cycle* staff, was stolen from the north end of John Carpenter Street, opposite Dorset House, Tudor Street. The machine carried the registration numbers "H.P.3460," and was fitted with a Lucas Magdyno (upright), Bonniksen trip speedometer, double Pedley handle-bar grips, and knee-grips. The engine and frame numbers respectively are: 79938 and 318358.

### A Warning.

The Chief Constable of the County of Hertford writes asking us to warn motor cyclists to drive carefully through Markgate on the St. Albans—Dunstable road. Owing to complaints having been made with regard to motor vehicles travelling at a speed dangerous to the public the Chief Constable is taking special action to deal with the matter by placing a control there, and he proposes to prosecute drivers against whom a *prima facie* case is established. The Chief Constable states that he is satisfied that in many cases the offences are due more to thoughtlessness than to wilful disregard of the law, and adds that when last year we gave publicity to similar complaints arising at Welwyn, there a marked improvement immediately followed.

THE NEXT STAGE!

*MOTOR CYCLISTS interested in small or large cars should read*

The Autocar

Every Friday **4d.**

*the forerunner of all motoring journals. Founded in 1895, it remains the largest and most successful automobile paper, and enjoys the greatest circulation. It is universally accepted as the representative British motoring journal.*

## Special Features.

T.T. NOTES AND NEWS.
THE TWO-STROKE ENGINE IN PRACTICE.
WHO WILL WIN?

### Noisy Exhausts.

For using a noisy motor bicycle in Hampstead a reader of this journal was recently convicted and fined £5. The fine appears to have been unnecessarily high.

### Who is the Oldest Motor Cyclist?

Mr. E. Blackburn, an octogenarian, but nevertheless enthusiastic member of the Middlesbrough and District M.C., claims to be the oldest active motor cyclist in the country. Where are the centenarians?

### Enlarged Scope for 'Varsity Club.

An important change has been made in the constitution of the Oxford University M.C.C., and membership is now open to anyone who is a past member of the University. The club has also been enlarged to admit owners of cars, and with this end in view its title will henceforth be the Oxford University M.C. Particulars may be obtained from the Rev. M. P. Sargent, Saint Edward's School, Oxford.

### Important Irish Trial.

On Whit Monday (June 5th) the Cork and District M.C. is holding an open trial (under permit from the M.C.U. of Ireland), which it is suggested might be conveniently attended by English riders returning from the T.T., who could reach Cork by a direct boat from Liverpool on Whit Sunday. Some of the finest scenery in the South of Ireland will be included in the route, the award list is attractive, and entry costs only 25s., or for members 20s. Fuller particulars may be obtained from Mr. R. S. Russell, 4, Princes Street, Cork.

### Ner-a-Cars and Harpers in the T.T.

Under the ambitious heading of "Motoring and Aviation," there appear, in *The Edinburgh Evening News* of May 10th, some comments on the Scottish Six Days Trials, characterised, to say the least, by a most amusing air of innocence. The following extract is certainly a gem, which needs no further adornment from us: "One will await with interest the performances of the Ner-a-car and the (Harper) runabouts in the Isle of Man T.T. races, a test which, although not so severe, brings out to the full the capabilities of any vehicle."

### he Junior T.T. Race Report.

Next week's issue will contain a report f the Lightweight and Junior T.T. races nd will be available in the Isle of Man ie day after the event.

### olice Traps in Oxford.

An Oxford correspondent warns readers f *The Motor Cycle* of police traps in ligh Street, Oxford, in the ten-mile mit, and on all the main roads leading nto the city.

### \ Belgian Hill Climb.

At the Mont-Theux (Belgium) hill-limb, Pisart, Jr., on a Coventry Eagle ightweight, was classified first among the uniors, winning the gold medal offered by the firm of Gillet.

### Looking Ahead.

There is a motor cycle club in the North which has already "issued" one or two nvitations for its annual dinner to be held n *December next*. "This ensures being irst and getting *the people you want*," says the secretary.

### Dogs in the Southampton Area.

Motorists are reminded that any dogs which are taken within a radius of fifteen miles from Southampton will not be permitted to leave the area, and any motorists taking a dog out of the area are liable to serious penalties.

### Ether as a Fuel.

A correspondent who has been experimenting with ether as a fuel writes that he has found it quite satisfactory as regards starting, but once the engine got warmed up pre-ignition ensued. He is of the opinion that it vaporizes too readily for practical use.

### A Record Entry.

When in 1920 381 entries had been received for the London-Edinburgh run, it was thought to be a wonderful entry. This year, however, despite the proximity of the T.T. Races, the record has been broken by twelve, no less than 392 having been received (129 motor bicycles, 110 sidecar outfits, 20 three-wheelers, and 133 cars).

### Fugitives from Justice.

A "hold-up" of motor traffic in Nottingham on a recent Saturday for police examination of licences and registration numbers was responsible for numerous humorous incidents. What amused the minions of the law as much as anything, however, was the action of several motorists, who "got wise" of what was happening and turned tail quickly to fetch their forgotten licences.

### The 500 Miles Race.

Instead of there being one prize for this year's 500 miles race to be run off at Brooklands on September 23rd, there will be a separate prize for each class. The classes will be started at different times so that an endeavour will be made for all to finish together. Entries are limited to fifteen per class, so that immediate application should be made to the Secretary, The British Motor Cycle Racing Club, 83, Pall Mall, London, S.W.1. Classes will be distinguished by riders wearing jerseys of various colours.

### First Aid on Brooklands.

At all long distance B.M.C.R.C. race meetings a travelling marshal with a first-aid outfit in a sidecar is to patrol the track.

### An Undue Noise Ban.

Notts County Council have made a by-law to prevent trippers and other parties from creating annoyance or any disturbance in the towns and villages of the country. Among other things prohibited are "horns and other noisy instruments. loud singing or any outcry."

### 50 Mile Race at Pendine.

On Whit Monday (June 5th) a 50 mile race for machines of any capacity will be included in the programme of the Carmarthen and Dist. M.C. and C.C.C. meeting on Pendine Sands. Two silver cups figure on the award list, further particulars of which may be obtained from the joint secretaries at the Nelson Hotel, Carmarthen.

### Unconventional Machines Sought.

For his club's Second London Rally on Whit Monday at Hendon Aerodrome, Mr. Alan W. Day, the secretary of the North London M.C.C., wishes to get in touch with owners of interesting and unconventional machines, a display of which will be a feature of the meeting. Mr. Day's address is "Claremont," Ballards Lane, Finchley, N.3.

### Simplification of Traffic Signals.

Since the introduction of a new "stop" signal in Nottingham there has been some little confusion, due mostly to many motorists not being aware of the change and not quite understanding what is meant when a policeman on point duty raises his right arm above his head to stop all approaching traffic or extends his left arm to hold up traffic in the rear.

### The Pastime in South Africa.

Organised by the Cape Peninsula M.C. and C.C., the Kloof hill-climb was a great success. The distance of the climb was one and a quarter miles. Each competitor was allowed to make two attempts, the faster performance of the two being recorded on his behalf. Fastest time of the day was made by J. W. du Toit (Harley-Davidson). Results were as follows: Class A, J. W. du Toit (Harley-Davidson). 397; L. M. Cran (Harley-Davidson sc.), 389; E. Lawrence (Harley-Davidson sc.), 385. Class B, L. E. Hamerton (Indian Scout sc.), figure of merit 398; J. Buyskes (Triumph), 319; A. F. du Toit (Indian), 317.

### Next B.M.C.R.C. Meeting.

Short distance races will be features of the third B.M.C.R.C. members' meeting on June 10th. The programme will consist of three 2-lap races, three 5-lap races, a 2-lap passenger handicap, and a 3-lap private owners' handicap open to any member who signs the private owner declaration on the form of application for or renewal of a 1922 membership, riding any class of machine which is his own private property. Licences and registration books must be offered for inspection at the start of the race. The final event at 5 p.m. will be a 5-lap passenger handicap, open to sidecars and two-seater cycle cars of any class.

### The Cremona Circuit.

While the Norton ridden by Sironi was the winner in the Cremona race run in April with another Norton second ridden by Col. Ricci Giuseppe, it now appears that in the second race run off on May 7th the winner rode a Sports Sunbeam. Sironi, however, was a hot favourite, but the breaking of his left handle-bar reduced his speed and brought him to second place. Five Nortons finished, winning the special team prize.

### Matter Out of Place.

Recently a correspondent sent us a piece of battered steel wire which he had discovered in his Triumph crank case. At the time we were unable to account for its presence, but since then Mr. T. W. Loughborough, Secretary of the A.C.U., was driving home his Morgan, which had just been fitted with a new and very carefully tuned engine, and shortly after beginning his journey he suffered from a stuck-up exhaust valve. He freed it, continued, and was again delayed from the same cause. Having had his toolkit stolen, he was unable to do anything on the road, but proceeded to the nearest garage on one cylinder. The inlet valve gear was dismantled and a 4in. piece of steel wire was found underneath the exhaust valve. The explanation is that this steel wire was used for checking the timing, and had, unfortunately, been dropped through the compression tap. This most likely accounts for the trouble experienced by the Triumph owner.

### The U.M.F. Grand Prix.

Entries for this important Continental fixture are now closed at ordinary fees. They close at double fees (800 francs) on June 15th, and must be forwarded through the A.C.U., 83, Pall Mall, London, S.W.1. On the whole, Great Britain is well represented in this race; in the 250 c.c. class there are a Massey-Arran, a New Imperial, and a Levis; in the 350 c.c. class an Englishman, Bartlett, will ride a French A.B.C., and in the 500 c.c. class there will be three Nortons, three Sunbeams, and two Triumphs.

Entries at ordinary fees stands as follows:—

250 c.c. CLASS.

| | |
|---|---|
| Armor. | Levis (G. S. Davison). |
| Thomann. | Isoard Liadois (Isoard) |
| Motosolo (Clech) | Velocette (Cottin). |
| Massey-Arran. | Velocette (Nel). |
| New Imperial (Bert Kershaw). | Yvel's (Froment). |
| | Chauvière (Chauvière). |

350 c.c. CLASS

| | |
|---|---|
| Alcyon. | Garelli. |
| Alcyon. | Garelli. |
| A.B.C. (Bartlett). | Garelli. |
| Yvel's (Vernisse). | |

500 c.c. CLASS.

| | |
|---|---|
| Norton. | Sunbeam (Bennett). |
| Norton. | Sunbeam (de la Hay). |
| Norton. | Sunbeam (Chappaz). |
| Alcyon. | Triumph (Pinuey). |
| Alcyon. | Triumph (Edmond). |
| Alcyon. | Motosacoche. |
| Peugeot (Péan). | Motosacoche. |
| Peugeot (Gillard). | Griffon (Borgotti). |
| A.B.C. (Naas). | |

It will be noted that Italian machines will compete for the first time in the U.M.F. Grand Prix. The Garelli is a most original machine, to the performances of which we shall look forward with interest.

### Newcastle and Northern M.C.C.

Something like 120 members turned out for the first social run of the amalgamated club, which was very successful.

### Gravesend and District M.C.C.

Great public interest was taken in the club's recent ninety-mile trial, which was organised on the lines of the old A.C.U. Quarterly trials, an idea which proved a big success in practice.

### West Kent M.C., Rochester and District M.C.C. and Canterbury and District M.C.C.

Another joint hill-climb will be held by these clubs on the Cut, 2¾ miles from Maidstone, on the 28th inst. Private owner riders only will be catered for. The other Kent clubs are invited to co-operate; fuller information is obtainable from Capt. G. Maund, 1, Clarendon Terrace, King Street, Maidstone, Kent.

### East South Wales Centre A.C.U.

Ideal weather favoured the first reliability trial on the 6th inst., which included Thefadoc Hill as the chief test piece.

Four teams qualified for the team prizes with more than 285 marks, as follows: Tredegar, Abergavenny A, Eastern Valleys A, Blaina A. A vase for the best sidecar performance, and a bowl for the best solo performance, were not awarded pending the settlement of a dispute.

### Liverpool M.C.

Some excellent sport was witnessed at the hill-climb at Pen-y-Ball, Holywell, carried out in the presence of some hundreds of spectators. The arrangements were capital, although it would appear to be necessary for a more strict watch being maintained on the whole of the hill. G. G. Barnard, riding a 499 c.c. Sunbeam, got away in fine style, and with a remarkably good rush combined with clever cornering passed the timekeeper at 34 4-5sec., the speed working out at approximately 41 m.p.h.—not bad for a hill averaging something like 1 in 5 and with sections of about 1 in 4.

RESULTS.

Classes 1 and 2 (350 c.c.).—1, J. Cooke (2¾ N. Scale), 40⅕ sec.; 2, H. Jones (2¾ A.J.S.), 43⅕ sec.; 3, S. Hughes (2¾ Sunbeam), 44⅕ sec.

Class 3 (500 c.c. expert barred).—1, H. Gaskell (3½ Triumph), 38⅕ sec.; 2, J. Ashworth (3½ Rudge), 40 sec.; 3 (tied), S. I. Banner (3½ Sunbeam), 40⅕ sec., and E. Sinclair (3½ Sunbeam), 40⅕ sec.

Class 4 (500 c.c. general).—1, G. Barnard (3½ Sunbeam), 34⅕ sec.; 2, G. F. Burns (3½ Sunbeam), 35⅕ sec.; 3, H. Gaskell (3½ Triumph), 38⅕ sec.

Class 5 (750 c.c. expert barred).—1, H. Gaskell (3½ Triumph), 38⅕ sec.; 2, S. I. Banner (3½ Sunbeam), 40⅕ sec.; 3, Copley (3½ Norton), 41⅕ sec.

### Southampton Bohemian M.C.C.

South Harting Hill was the scene of the club's second hill-climb, formula results of which were as follows:

SOLO.

1. H. W. Hands (3½ Norton).
2. R. Mines (3½ Kynock).
3. R. James (2½ A.J.S.).
4. E. Hitchins (11 Henderson).

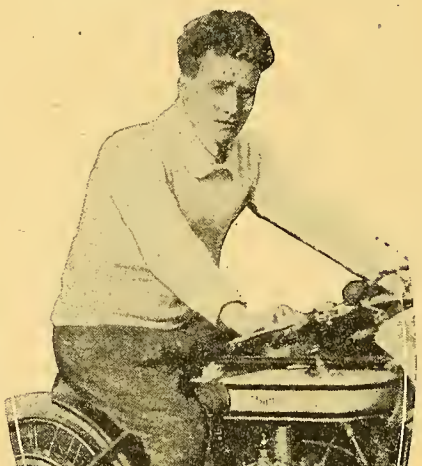
SIDECARS.

1. H. Dale (8 Ruby sc.).
2. W. Matou (8 Sunbeam sc.).
3. R. Burtenshaw (3¾ Scott sc.).
4. A. Saunders (7 F.N. sc.).

### North-West London M.C.

Eighteen competitors in the recent optional route competition started from Long Ditton, determined to circumvent the wily map planner, who had fixed the four points to be visited at a schedule of 20 miles per hour over roads justly assumed to be almost impossible. In contrast with last year's results three were actually successful in combining the necessary judgment with speed:

O. B. Smyth (3½ Sunbeam).
A. H. Love (3½ Norton).
J. D. Sangway (5 Zenith).



Frank Sisson and the 490 c.c. Norton on which he won six firsts in the recent Loughborough and District M.C.C. hill climb making fastest time of the day in both solo and passenger classes.

### Lewes and District M.C.C.

On the 14th inst. the club held a reliability trial over a secret 80 miles course within a 10 miles radius of Lewes. There was a good entry, and the results were as follows:—

300 c.c.—1, W. J. Hylands (2¼ Verus).
Unlimited Solo.—1, W. H. Law (2¾ Coulson B).
Sidecars Unlimited.—1, R. G. Martin (2¾ Royal Ruby).
Ladies' Class.—1, Miss E. M. Dunford (2¼ Sports Royal Enfield).
Cycle Cars.—1, L. Humphries (8 G.N.).

### North Wales M.C.C.

On Thursday, May 11th, the club held a fast and slow hill climb near Llandegla when quite a good number of competitors faced the starter. The winner was the competitor who could show the greatest margin of time between his fast and slow climb, using the same gear in each case gears and clutches were, of course, sealed. Results:

1, W. Edwards (3½ Scott Squirrel); 2, S. W. Smith (3½ Scott Squirrel); 3, W. J. Kellett (3½ Sports Sunbeam).
Silver medal for best 350 c.c. machine.—G. Jones (2¾ A.J.S.).

### Atherton and District M.C.C.

Ideal weather favoured the first speed trial and hill climb of this newly-formed club, and a very enjoyable time was spent on the Yorkshire moors on the afternoon of the 7th inst. A mile was measured on the famous "Bills o' Jacks" hill, which has an average gradient of 1 in 8, and is four miles long. F. Barford and W. Morrison, on an 8 h.p. Dot-Jap, and a 3½ h.p. Norton respectively, tied for the best time of the day in 1m. 20s. J. Mansley (2¾ Douglas) won the first for the lightweights, his time being 1m. 45s.

Mr. T. P. Speakman, "Journal" Office, Atherton, the hon. secretary, will be pleased to receive applications for membership.

### Redditch and District M.C.C.

Results of the hill climb on the 26th ult. have now been announced, as follows:—

350 C.C. SOLO.

Time.—1st, B. Kershaw (2¼ New Imperial).
Formula.—1st, B. Kershaw (2¼ New Imperial).

600 C.C. SOLO.

Time.—1st, J. Bacon (3½ Sunbeam); 2nd, E. Smith (3½ Norton).
Formula.—1st, B. Kershaw (2¼ New Imperial); 2nd, J. Bacon (3½ Sunbeam).

UNLIMITED SOLO.

Time.—1st, J. Bacon (3½ Sunbeam); 2nd, E. Smith (3½ Norton).

600 C.C. PASSENGER.

Formula.—1st, C. Brown (3½ Triumph sc.).

UNLIMITED PASSENGER.

Formula.—1st, C. Brown (3½ Triumph sc.).

# ANNOUNCING THE T.T. RESULTS.

## An Alphabetical List of Prominent Positions where "The Motor Cycle" series of Telegrams will be displayed next Tuesday and Thursday.

IT is not every motor cyclist who can afford the time to visit the Isle of Man in order to witness the Tourist Trophy races—but all are interested in this blue riband event.

*The Motor Cycle* telegrams, which are displayed in prominent positions, have always been appreciated, for only by their aid are many thousands of our readers able to follow the progress of the races by the positions of the riders at the conclusion of each lap.

This year the list of places where these telegrams will be displayed has been considerably extended, and would have been even larger but for the fact that there is a limit to the number which can be handled expeditiously by the Post Office officials.

*In order that motor cyclists may follow the progress of the Tourist Trophy Races on Tuesday and Thursday of next week, "The Motor Cycle" is following its usual practice of circulating by telegrams all over the country the respective lap positions. A list of addresses where these telegrams will be displayed is appended.*

**Aberdeen.**—Cruikshank, 13-19, Rose Mount, Viaduct.
**Ammanford (Carm.).**—Harries, Ironmongers.
**Aylesbury (Bucks.).**—Ebora's Garage, 44, Walton Street.
**Bala (N. Wales).**—Jones Bros., Henblas Garage.
**Bedford.**—J. Crawley and Sons, Motor Engineers, 4, St. Mary's Street.
**Birkenhead.**—H. J. Marston's, 50, Argyle Street.
**Birmingham.**—Amac, Ltd., Aston Cross; Colmore Depot, 31, Colmore Row; County Cycle and Motor Co., 307, Broad Street; H. Cutler and Son, Haodsworth Motor Depot, 247, Soho Road; P. J. Evaos, 81, John Bright Street; Iliffe and Sons Ltd., Guildhall Buildings, Navigation Street; James Cycle Co., Ltd., 9, Broad Street Corner; The Premier Motor Co., Aston Road; Veloce, Ltd., Victoria Road, Six Ways, Aston Manor; Wm. Watson, Sunbeam Depot, Chamberlain Square; Frank Whitworth, Ltd., 139, New Street; J. J. Woodgate, Small Heath Park Motor and Cycle Depot.
**Blackburn.**—Slaters, 3, Lord Street (Market Place); J. Walsh and Co., Central Garage, Sudell Cross.
**Blackpool.**—Brown and Mallalieu, Metropole Garage, General Street.
**Bolton.**—Stanley Parker and Co., Bradshawgate.
**Bournemouth.**—P. W. Surplice, Poole Hill.
**Bradford.**—A. Hodgson, 10, Horton Road; Eric S. Myers, 52, Manningham Lane; Chas. Sidney, Ltd., 142, Manningham Lane.

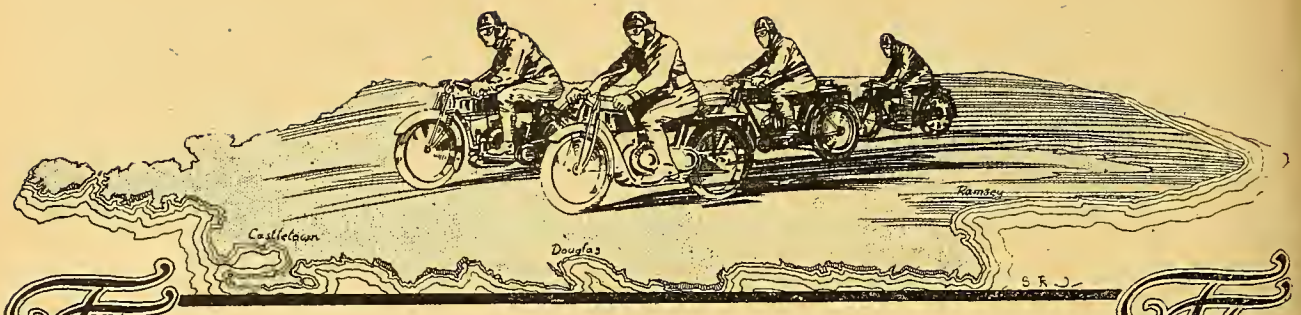
**Sunderland.**—Grimshaw Leather and Co., Ltd. Union Street.
**Torquay.**—Nunn, Farmer and Co., 73, Union Street.
**Taunton.**—Hewin's Garages and Engineering Co., Ltd., Corporation Street.
**Tunbridge Wells.**—R. Carey, 16-17, Crescent Road; Read Bros., 46, Goods Station Road; G. E. Tunbridge, 2, Vale Road.
**Walsall.**—The Colmore Depot, Stafford Street; Maude's Motor Mart, The Walsall Garages, Wolverhampton Street.
**Walthamstow (Essex).**—D. C. Lamb, 151, High Street.
**Weston-super-Mare.**—D. Read and Co., Orchard Street.
**Wisbech.**—Crabtree and Sons, Ltd., Motor Engineers.
**Wolverhampton.**—Cyril Williams, Chapel Ash Depot.
**Worcester.**—W. J. Bladder, 52, Sidbury; Eric Williams, Ltd., The Motor Cycle Depot.
**Wrexham.**—North Wales Motor Exchange.
**Yeovil.**—James Moffat, Town Hall Garage.
**York.**—Smith Bros., Walmgate; The Scott Motor Cycle Co., Ltd., Saltaire, Shipley.



# T.T. NOTES AND NEWS.

## The Practising Reviewed. Form of Men and Machines Improve Day by Day. Unfavourable Weather Conditions. Organisation Complete. Compiled from the Daily Reports of "The Motor Cycle" Staff in the Isle of Man.

ALTHOUGH high speeds are not expected in the early stages of the practising, some of the riders on their very first lap put up some very good speeds. Norman Black (Norton), for example, completed a circuit on Monday of last week in 46m. 1s., averaging over 49 m.p.h., while D. M. Brown the popular Manx rider, on a sister mount beat Black's time by nearly a minute. On his first lap he averaged nearly 48 m.p.h., and completed a second circuit at 50 m.p.h.

* * * *

There are no twins entered for the lightweight race, and only two (Douglas) in the Junior. In the Senior event Douglas, Scott, New Gerrard, and N.U.T. are the only representatives of the multi-cylinder.

* * * *

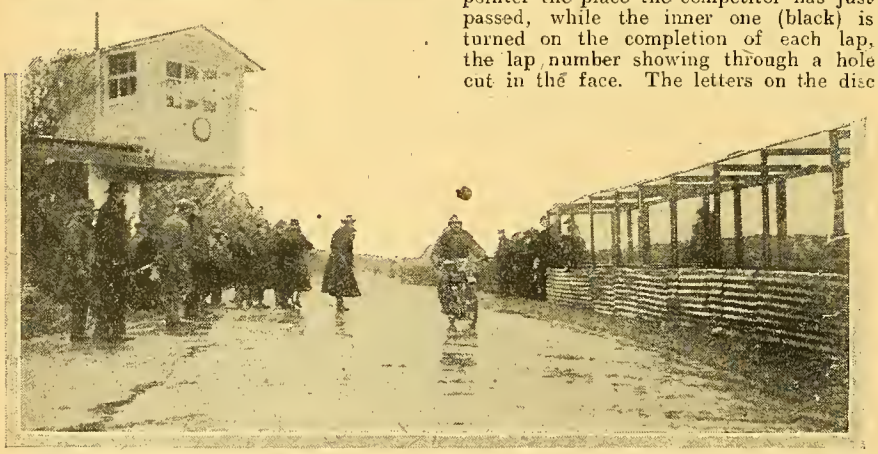
Dr. Hopwood, the private owner Levis rider, had trouble with his machine early last week. He has an assembled machine with a four-stroke engine in a Levis frame. This machine is reported to be named the Leboh—a title which conceals a reference to the qualities of the engine.

* * * *

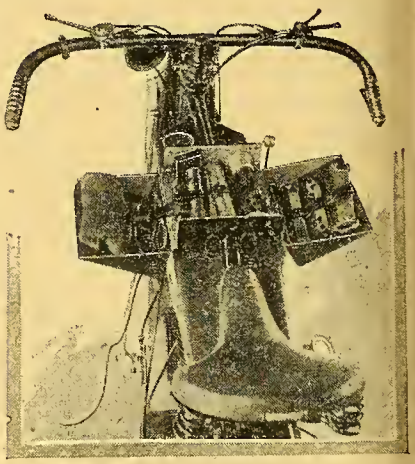
## AN IMPROVED SCORING BOARD.

Those who watch the races from the grand stand will have less difficulty in following the progress of the riders than hitherto.

Competitors' numbers will be placed between two rows of discs, while above there is a yellow disc, which is swung into view on the competitor reaching Governor's Bridge. Below this is the route disc, on which there are two dials. Of these the outer shows by means of a pointer the place the competitor has just passed, while the inner one (black) is turned on the completion of each lap, the lap number showing through a hole cut in the face. The letters on the disc will signify: O, start; B, Ballacraine; S, Sulby; R, Ramsey; B, Bungalow, C, Craig-ne-Baa. Beneath these discs are painted the competitors' speeds for each lap.



In the early hours of dreary wet mornings competitors and spectators turned out for the practising. G. W. Tucker (490 c.c. Norton) arriving after a run over the course.



An excellent idea: the tool case on the T.T. Rudge machine. Conveniently placed and instantly opened without the tools dropping on the ground.

* * * *

## O.H.V. JAP ENGINES.

In recent times in describing J.A.P. racing engines we have emphasised the fact that they have closely followed standard practice, and, notwithstanding, remarkable successes have been obtained. However, for this year's T.T. Races J. A. Prestwich & Co. have evolved a special single-cylinder engine which is probably one of the dark horses in the event.

**T. Notes and News.—**

Due to the enormous radiating fins, ıe 350 c.c. unit resembles one of much ırger capacity. A detachable head is rovided, the bottom fin of which is conderably larger than the rest. This head held on to the cylinder by means of ng bolts screwed into the head casting ith nuts near their base. When these uts are unscrewed the bolts fall down rough holes in the crank case to the epth of about 1in., allowing the cylinder head to be easily withdrawn.

The most remarkable feature of the ngine is that though it has overhead alves it occupies no more space than a ide valve engine—in fact, the one we inpected was fitted in the same New Imerial frame as accommodates the stanard type engine.

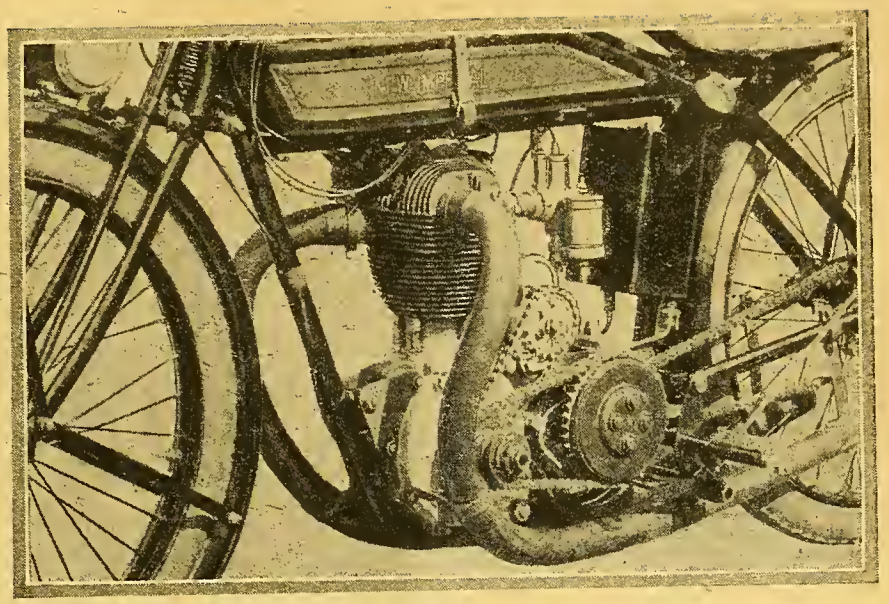
* * * *

A double bevel drive is employed to ctuate the cam gear of the new J.A.P. ngine, and is enclosed in an aluminium asing, the rockers extending at right ngles to the machine and protruding hrough the casing. Since the valve gear lesign is the subject of a patent details annot be disclosed at the moment. A ravity drip feed is employed to lubriate the valve gear, and any excess drains down the shaft into the lower bevel gear case. Situated at the base of the latter is the relief oil pipe which is directed on to the front chain, while the rear chain is lubricated by means of a drip feed at the bottom of the main oil tank.

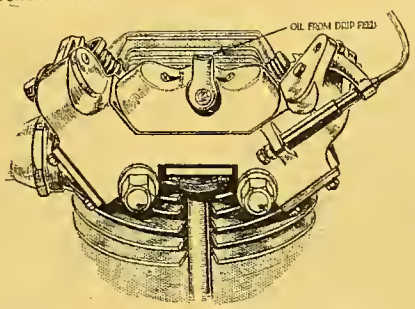
Two oil tanks are employed, one on the top tube for the valve gear and the other on the saddle tube, which is provided with a pump, foot-operated and delivering the oil to the side of the cylinder. Throughout the engine ball and roller bearings are employed, roller bearings being fitted to the drive side of the main shaft. There is only one plain bearing in the engine, and that is the gudgeon pin.

So as to enable the exhaust gases to be got rid of as quickly as possible two huge exhaust pipes, each 1¾in. in diameter, are fitted.

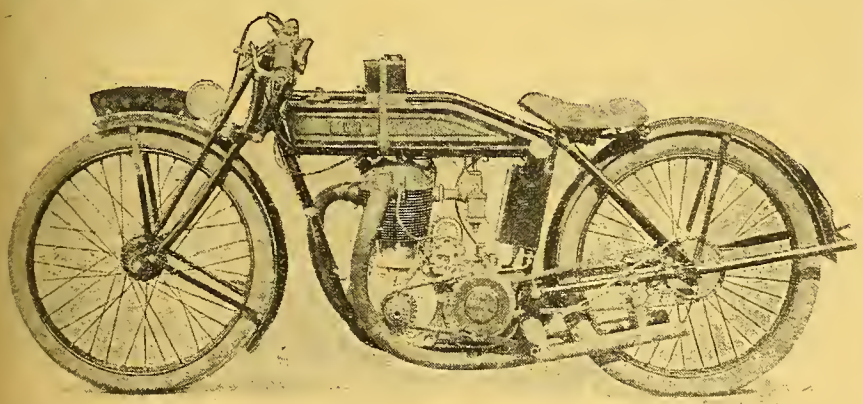
An aluminium piston with domed top and two rings is employed. The valves are set at 90°, and the head is of spherical pattern. The exact dimensions of the engine are 74×80 mm., 348 c.c., while the compression ratio is 5 to 1. Designed only five weeks ago, this engine will be fitted to a New Imperial, and will be ridden by H. Le Vack in both Junior and Senior races.



A startling J.A.P. departure. It will be noticed that the engine, though fitted with overhead valves, occupies no more space than a side valve engine.



Compactness in design is one of the features of the new J.A.P. overhead valve gear. Note the neat exhaust lifter arrangement and the drip feed to lubricate the internal mechanism.



One of the dark horses of the T.T. A New Imperial fitted with the new 348 c.c. o.h.v. J.A.P. engine. Observe the large twin exhaust pipes.

So far as the rest of the machine is concerned, the transmission is by chain, and a chain from a sprocket mounted on the main shaft is employed to drive the magneto, otherwise the machine follows New Imperial T.T. practice.

It should be remembered that it was a J.A.P. engine that brought the New Imperial success in last year's 250 c.c. event by the winning of *The Motor Cycle* Cup by D. G. Prentice.

* * * *

Special arrangements have been made by the Chief Constable of Liverpool on the instance of the Auto-Cycle Union, by which motor cyclists who will be crossing to the Isle of Man will be able to reach the point of embarkation with their machines without hindrance. Riders should proceed by way of Prince's Parade and No. 7 Bridge.

* * * *

The A.C.U. has also made arrangements for ample garage accommodation in Liverpool. Messrs. Theo and Co., of Hatton Garden, Liverpool, have undertaken to store a considerable number of motor cycles at 9d. a night and motor bicycles with sidecars at 1s. 7d. a night. Messrs. Blake and Co. store motor cycles at their Hope Street branch at 1s. per night.

* * * *

The official programme is now ready. This useful document is profusely illustrated with photographs from *The Motor Cycle*, including a complete history of the T.T. Races from their inception in 1907. It is worth recording that the T.T. Races owe their origin to a suggestion made by the late Mr. H. W. Staner, editor of *The Autocar* and managing editor of *The Motor Cycle*, at an A.C.U. dinner in the early part of 1907. The programme can be obtained, price 6d. a copy, from the Secretary, The Auto-Cycle Union, 83, Pall Mall, London, S.W.1.

## SCOTTS PRACTICALLY STANDARD.

In general outline the Scotts for the Senior Race follow the standard lines of the Squirrel models. They have special oiling arrangements, however, and are equipped with Webb internal-expanding front brakes, large capacity tanks, and several detail improvements.

* * * *

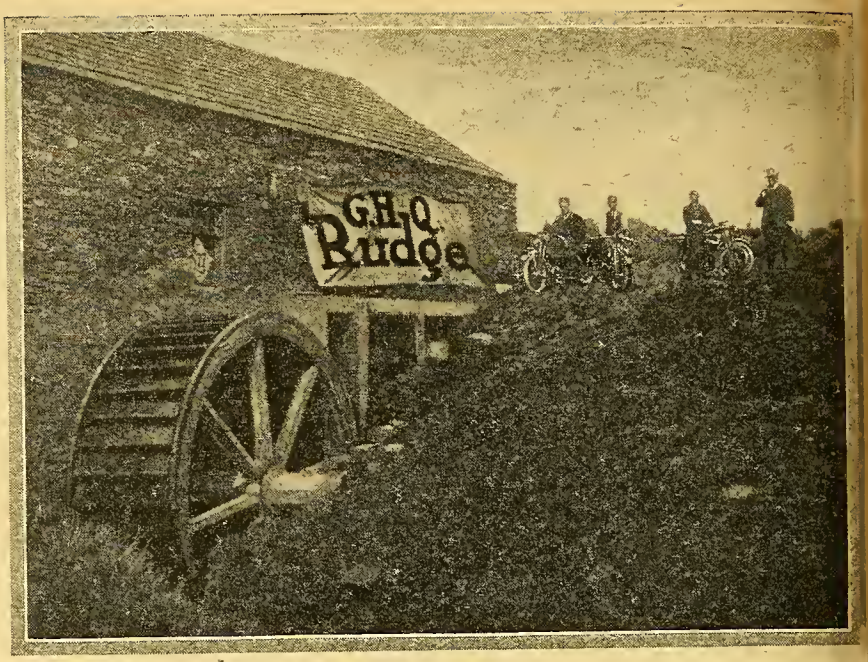
The Scott engine has a new form of intake combined with the two transfer port covers, and the carburetter stub is bolted on. Oil for the engine is carried in a tank mounted on the top main tube of the frame, and it is fed through a separate gravity drip to each crank case. Normally, the oil reservoir is the interior of the two principal frame members, but this is used on the T.T. mounts to carry lubricant for the gear and for the two primary chains, on which it is allowed to drip by gravity. A detail improvement to the machine which is worthy of note is the V machined in the rear chain sprocket, in which the brake shoe beds.

* * * *

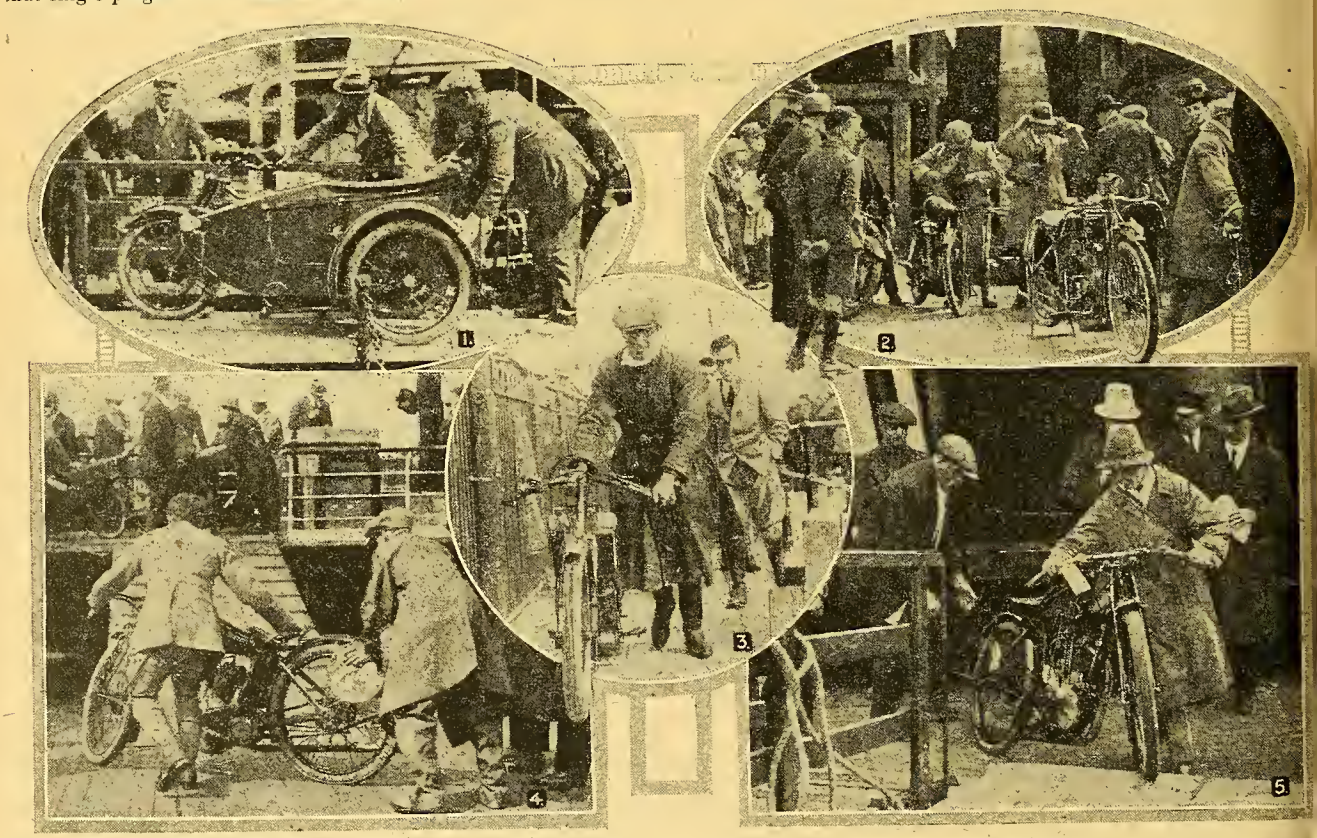
Special mention must be made of the neat fitting of the Webb expanding front brake, which is applied with some considerable neatness.

* * * *

Although the Scotts have been run in practice with two spark magnetos and two plugs in the heads it is quite likely that single plugs will be used in the races.



Where the Rudge secrets are kept. An old watermill used as a garage by a Coventry contingent which hopes to repeat the Rudge success of 1914.



BUSY SCENES ON THE QUAYSIDE AT LIVERPOOL AND DOUGLAS. Competitors embarking with their machines. (1) Not a speed mount but a vehicle that will be appreciated in and around Douglas. (2) International entrants arriving—the Indian team awaiting their turn to embark. (3) C. P. Wood and his Scott arrive at Douglas. (4) F. W. Dixon takes his Indian aboard at Liverpool. (5) Bert Kershaw with his New Imperial.

**T. T. Notes and News.—**

Mr. G. E. Taylor will be in charge of Messrs. Best & Lloyd's interests in the Isle of Man, and will be found at their depot, Arbory House, 21, Christian Road, Douglas, from to-day.

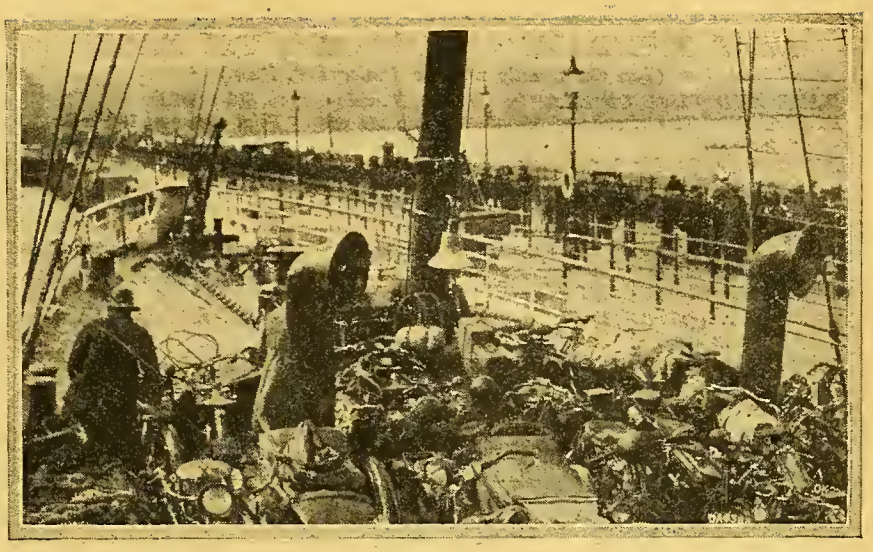
* * * *

Lodge Plugs, Ltd., will be represented by Mr. F. W. Cave at the Sefton Hotel, Douglas.

* * * *

To mark the return of the Rudge to the T.T. Races in the I.O.M. its manufacturers offer a prize of a dress in Rudge green, value ten guineas, to the first young lady over eighteen years of age to guess the number of corners in the T.T. course, and to the first motor cyclist who solves the said problem correctly a prize worth five guineas to be selected from the stock of the Athol Motor Garage or any shop in Douglas. The judges are Messrs. G. J. A. Brown and V. A. Holroyd. A coupon obtainable from Rudge-Whitworth, Ltd., must be filled in and prizes claimed at the Rudge headquarters, Homefield, 77, Palace Parade, Queen's Promenade, Douglas, on Wednesday, May 31st, before 12 noon.

* * * *



After a stormy passage. Quite a number of the racing machines suffered through their soaking on the decks of the Isle of Man steamers.

## THREE BRAKES WITH ONE CONTROL.

No passing glance must be given to the Indian machines, for they are thoroughly workmanlike, and proved themselves so in last year's Senior event. Moreover, the star rider, F. W. Dixon, is a motor cyclist of outstanding capability. Dixon's machine is fitted with a special braking system of his own devising; not only has it got the usual two rear brakes, one internal and expanding and the other a contracting band, but the front wheel has been specially fitted with a Webb expanding brake. All three are controlled from the one pedal on the right-hand side of the machine.

The pedal pulls on the internal back brake by a direct coupled rod, and operates the contracting band through a rod and spring device fractionally later than the other brake, the degree of lag between the two being controllable by a wing nut, while riding if need be. Pulled also by the pedal is the wire control for the Webb front-wheel brake, but the outer casing of the control is divided, the ends abutting in stops capable of being separated by a small cam plate carried on the fork girders. This cam is controlled by the lower of a pair of ordinary carburetter levers. According to the setting of this lever (which virtually alters the length of the brake cable outer casing), the front brake may be made to operate coincidently and powerfully with the back brake, or later and less powerfully, as required. This setting will be made as experience dictates long before each individual corner is reached.

Beautifully made and fitted, this ingenious device gives evidence of the serious bid which Dixon intends to make this year for the race he came so near to winning last year.

* * *

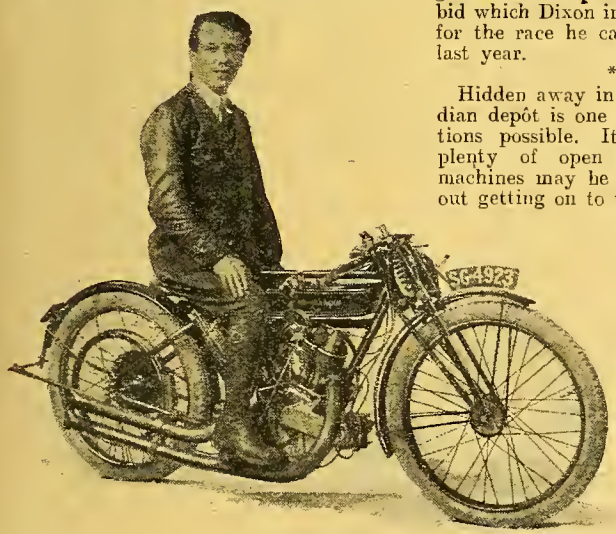
Hidden away in a huge quarry, the Indian depôt is one of the most useful locations possible. It is secluded, but has plenty of open space on which the machines may be "chased around" without getting on to the public roads.

## A PRIVATE OWNERS' RENDEZVOUS.

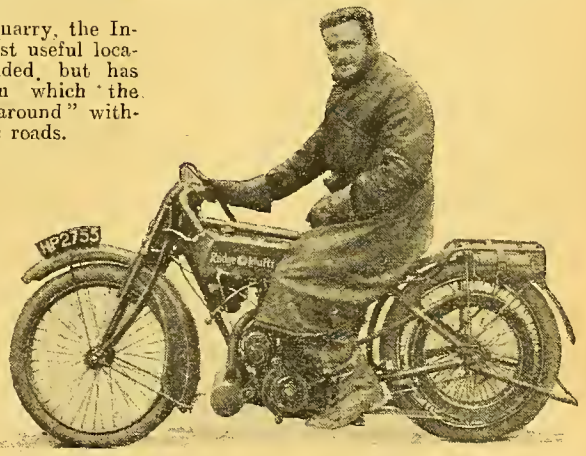
In a dark warehouse, situated in one of those curiously contorted back streets behind the promenade, the Norton private owners, under the care of Graham Walker (who is practising on the o.h.v. model to be ridden by Vandervell), are a cheerful little community. Spared the ill-luck which dogged their earlier days last year, the men are confident of a high percentage of success.

* * *

The Norton machines are quite a sight as they stand in a long row outside the headquarters while the riders take their early breakfast. Meanwhile, the daily work in the garage, which is open to the street, provides unbounded entertainment for a horde of urchins who are ardent Norton enthusiasts. Mrs. Knowles is keenly interested in the progress of the work, and is assisting in the preparation of her husband's machine.



J. A. Porter and his 500 c.c. twin New Gerrard, a shapely machine for the Senior event. A special racing side valve J.A.P. engine is fitted snugly in the frame.



W. L. Danskin—well known as a Trials rider—one of the Rudge team mounted on a Multi model; the only representative of all-belt drive in the Senior race.

## NEXT TUESDAY'S LIGHTWEIGHT T.T. RACE.

*(Ran concurrently with the Junior T.T. Race.)*

*DATE AND TIME OF START: 10 a.m., Tuesday, May 30th, 1922.*

*DISTANCE: Five circuits of 37 miles 6 furlongs each. Total distance, 188 miles 6 furlongs.*

*FIRST PRIZE: The Lightweight Tourist Trophy, to be held for one year. £30 in cash, small replica of trophy, and special gold medal.*

*SECOND PRIZE: £20 in cash.*

*THIRD PRIZE: £10 in cash.*

*TEAM PRIZE: To be won by a nominated team, the members of which must all finish the course within thirty minutes of the winner.*

*PRELIMINARY EXAMINATION: Monday, May 29th—*

*Nos. 1-25: 9.30 to 10 a.m.; Nos. 26-50: 10 to 11 a.m.; Nos. 50 up: 11 a.m. to 12 noon.*

*WINNERS OF "THE MOTOR CYCLE" CUP WHICH THE LIGHTWEIGHT TROPHY REPLACES.*

*1921 ... D. G. Prentice (New Imperial), 44·82 m.p.h.*

*1920 ... R. O. Clark (Levis), 38·87 m.p.h.*

*Fastest Lap: B. Kershaw (New Imperial) 49 m. 7 sec. = 46·11 m.p.h., 1921.*

## ENTRIES—THE RIDERS AND THEIR MOUNTS.

| No. | Entrant | Make | No. of Cyls. | Bore Stroke m.m. m.m. | Cubic Capacity c.c. | Driver. |

### TEAMS IN THE LIGHTWEIGHT RACE.

1. DIAMOND: H. Petty (No. 7), T. Simister (No. 19), O. Wade (No. 27).
2. LEVIS: G. S. Davison (No. 11), P. Pike (No. 18), F. W. Applebee (No. 24).
3. NEW IMPERIAL: D. G. Prentice (No. 1), D. B. Calder (No. 5), B. Kershaw (No. 15).
4. O.K. JUNIOR: N. Hall (No. 4), W. L. Handley (No. 26), F. C. North (No. 30).
5. SUN: G. Kuhn (No. 3), M. Bishop (No. 10), W. H. Lord (No. 14).
6. VELOCETTE: S. J. Jones (No. 9), G. Denley (No. 12), R. N. Judd (No. 29).

Generally, the Nortons are as fast as any, especially down the mountain, and a win, now long overdue, would be more than popular.

* * *

Manxmen estimate that the value of the T.T. Races to the Island is at least £50,000.

* * *

Rudge, Kirk-Onchan, is the telegraphic address of the Rudge Garage, The Old Mill, 77, Royal Avenue, Glen Onchan.

A hearty invitation is extended to visitors to inspect the Massey-Arran machines at the Massey-Arran Motor Co.'s headquarters, Irwell House, next door to the Sefton Hotel, Douglas.

* * *

Some ten years ago the Colmore Depot, who have entered two Douglases this year, discovered a new competition rider who had just come from abroad and entered him for the T.T. He put up a very good performance, though he did not actually win. This was Mr. S. L. Bailey, who is now general manager of Douglas Motors, Ltd.

* * *

The Hawthorns, 4, Cambridge Terrace, Douglas, will be the headquarters of Veloce, Ltd. Their racing colours will be black and gold.

* * * *

The following table shows how the different makes are represented in the races:

| | Lightweight Race. | Junior Race. | Senior Race. |
|---|---|---|---|
| A.J.S. ... ... ... | — | 7 | 3 |
| Beardmore-Precision | — | — | 3 |
| Cotton ... ... ... | — | 3 | — |
| Coulson .... ... | 2 | 2 | — |
| Diamond ... ... | 3 | 1 | — |
| Dot ... ... ... | — | 2 | — |
| Douglas ... ... | — | 2 | 5 |
| Duzmo ... ... | — | — | 1 |
| Edmund ... ... | — | 3 | — |
| Francis-Barnett ... | 1 | — | — |
| H.B. ... ... ... | — | 1 | — |
| Indian ... ... | — | — | 4 |
| Invicta ... ... ... | 1 | — | — |

| Levis ... ... ... | 4 | — | — |
| Massey-Arran ... ... | 1 | 2 | — |
| New Comet ... ... | — | 1 | — |
| New Gerrard ... ... | — | 1 | 1 |
| New Hudson ... ... | 1 | — | 2 |
| New Imperial ... ... | 7 | 1 | 1 |
| New Scale ... ... | — | 4 | — |
| Norton ... ... ... | — | — | 14 |
| N.U.T. ... ... ... | — | — | 1 |
| O.E.C. Blackburne ... | — | 1 | — |
| O.K.-Junior ... ... | 3 | — | — |
| Raleigh ... ... | — | 1 | — |
| Rex-Acme ... ... | 1 | — | — |
| Rudge ... ... | — | — | 8 |
| Scott ... ... ... | — | — | 5 |
| Sheffield-Henderson ... | 2 | 2 | 2 |
| Sunbeam ... ... | — | — | 12 |
| Sun-Vitesse ... ... | 3 | — | — |
| Velocette ... ... | 3 | — | — |
| | 32 | 38 | 62 |

* * * *

It will be seen from the above that only two makes are represented in all three races, *i.e.*, the New Imperial and the Sheffield Henderson.

* * * *

If H. W. Hassall (Norton) has not sufficiently recovered from his recent accident to ride, his place may be taken by Tony Vandervell, and if this happens the latter will be the first motor cycle T.T. competitor also to take part in the car T.T., in which he is to drive a Talbot.

* * * *

Most striking feature of the fleet of 349 c.c. A.J.S. machines is the size of the exhaust pipes—apparently about 2½in. diameter—quite big enough to keep rabbits in! The machines left Liverpool early last week, and suffered somewhat from the sea-water bath they received on a particularly rough crossing.

* * * *

New Imperial, Massey-Arran, and O.K.-Junior machines also received more sea-water than was good for their condition.

* * * *

During the T.T. Races the Alder Garage, Queen's Drive, Stoneycroft, Liverpool, is capable of storing a large number of motor cycles. Its proprietors will be glad to send their representative to help motorists to embark their machines.

* * * *

A newcomer to the T.T. Races is the New Gerrard, entered by J. A. Porter, of The Motor Mart, Edinburgh. Porter's mount for the Junior has a Blackburne o.h.v. engine, while in the Senior a twin J.A.P. will be used.

# A WEEK ON THE T.T. COURSE.

## Unfavourable Weather precludes Highest Speeds in Practice. Notes on Men and Machines in the Isle of Man.

AFTER a good start the first week of practising tailed away rather, and was taken fairly quietly by the majority.

On the second and third mornings the weather was "impossible," therefore it did not seem as though practising had started in earnest until Thursday morning, when there was a fine turn-out of about eighty riders.

Until Thursday, also, no great speeds were possible, and even then there was a considerable mist on the mountains. In many places the condition of the roads is not at all conducive to speed. Looseness characterises almost the whole of the mountain climb out of Ramsey, and the quantity of loose stones in the vicinity of the Gooseneck has demanded attention which will no doubt be given.

The competitors, of course, were somewhat dispirited by the earlier mornings' weather. After working hard on their machines they merely took them out to get thoroughly filthy, yet without the satisfaction of testing their speed, for the mountain mists reduced the range of visibility to a few yards, and in many places the surface was greasy in the extreme, especially at the corner below Craig-ny-Baa, and also on a particularly soft section between Hilberry and Cronk-ny-Mona.

Amongst the smaller machines, however, A.J.S. and New Imperial, in the 350 c.c. and 250 c.c. races respectively, are prime favourites. The latter, however, are threatened somewhat dangerously by some of the Blackburne-engined mounts, which appear to be very healthy, although their practice speeds have not been high.

### A Week's Practice.

On Monday, the 15th inst., the first morning of practice, 22 Senior, and a large number of Junior and Lightweight machines were on the course. Some good lap times were achieved, as the following figures testify:—

SENIOR.

| | M. | S. |
|---|---|---|

## *NEXT TUESDAY'S JUNIOR T.T. RACE.*

*(Run concurrently with the Lightweight T.T. Races.)*

*DATE AND TIME OF START: 9.30 a.m., Tuesday, May 30th, 1922.*
*DISTANCE: Five circuits of 37 miles 6 furlongs each. Total distance 188 miles 6 furlongs.*
*FIRST PRIZE: The Junior Tourist Trophy, to be held for one year. £30 in cash, small replica of trophy, and special gold medal.*
*SECOND PRIZE: £20 in cash.*
*THIRD PRIZE: £10 in cash.*
*TEAM PRIZE: To be won by a nominated team, the members of which must all finish the course within thirty minutes of the winner.*
*PRELIMINARY EXAMINATION: Monday, May 29th.*

*PREVIOUS WINNERS.*

| | | |
|---|---|---|
| *1921* | *Eric Williams, A.J.S. (74 × 81 mm. = 348 c.c.)* ... ... ... | *52.1 m.p.h.* |
| *1920* | *Cyril Williams, A.J.S. (74 × 81 mm. = 348 c.c.)* ... ... | *40·7 m.p.h.* |
| *1914* | *Eric Williams, A.J.S. (74 × 81 mm. = 348 c.c.)*... ... ... | *46·6 m.p.h.* |
| *1913* | *H. Mason, V twin N.U.T.-J.A.P. (60 × 61 mm. = 344 c.c.)* | *43·7 m.p.h.* |
| *1912* | *W. H. Bashall, flat twin Douglas (60·7 × 60 mm. = 350 c.c.)* | *39·6 m.p.h.* |
| *1911* | *P. J. Evans, V twin Humber (60 × 60 mm. = 340 c.c.)* ... | *41·5 m.p.h.* |

*FASTEST LAP: H. R. Davies (A.J.S.). Time, 41 m. 4 s. = 55·15 m.p.h., 1921.*

## ENTRIES—THE RIDERS AND THEIR MOUNTS.

| No. | Entrant. | Make. | No. of Cyls. | Bore m.m. | Stroke m.m. | Cubic Capacity c.c. | Rider. |

## TEAMS IN THE JUNIOR RACE.

1. A.J.S.: H. R. Davies (No. 33), G. Kelly (No. 43), H. F. Harris (No. 58).
2. EDMUND: E. Remington (No. 48), G. W. Shepherd (No. 56), G. Browne (No. 61).
3. NEW SCALE: G. E. Cowley (No. 45), R. Gray (No. 55), S. A. Dale (No. 59).
4. IVY: G. N. Norris (No. 36), T. A. Jones (No. 54), P. A. Newman (No. 63).

## A Week on the T.T. Course.—

JUNIOR.

| | M. | S. |
|---|---|---|
| V. Horsman (Raleigh) ... ... ... | 52 | 38 |
| E. Remington (Edmund) ... ... | 53 | 14 |
| G. W. Shepherd (Edmund) ... ... | 57 | 0 |
| G. Browne (Edmund) ... ... ... | 57 | 0 |

LIGHTWEIGHT.

| | M. | S. |
|---|---|---|
| D. Young (Rex-Acme) ... ... ... | 52 | 2 |
| L. Padley (Sheffield-Henderson)... ... | 54 | 14 |

RESERVES.

| | M. | S. |
|---|---|---|
| G. S. Davison (Levis) ... ... ... | 58 | 28 |
| P. Pike (Levis) ... ... ... ... | 56 | 1 |

In connection with the above practice times, it should be remembered that any time over 56m. 38s. is less than 40 m.p.h., while the best time recorded—D. M. Brown (Norton), 45m. 12s.—equals approximately 50 m.p.h. Last year's Senior race was won by a Junior machine at an average speed of 54 m.p.h.

### The Heroes.

Yes, they deserve that title, the brave thirty or so who faced a practice lap on Tuesday morning.

Starting away from the grand stand, the riders had a blinding rain carried by a biting wind driving full in their faces. In consequence no times worth considering can be reported, although several got round in about the hour or a little over.

All the machines on the course were in the Senior Class, except three Levises (or is the plural Levii?). The first of them to come round was the veteran F. W. Applebee, who is 60 years of age, and he was followed by Dr. Hopwood, who went straight on at speed.

At 6.45, too late for further starters, the rain was clearing away.

SENIOR TIMES.

| | M. | S. |
|---|---|---|
| T. C. de la Hay (Sunbeam) ... ... | 59 | 3 |
| W. Hollowell (Norton) ... ... ... | 59 | 15 |
| S. A. Crabtree (Sunbeam) ... ... | 52 | 53 |
| A. Carton (Norton) ... ... ... | 57 | 40 |
| N. Black (Norton) ... ... ... | 52 | 55 |
| R. Bownass (N.U.T.) ... ... ... | 56 | 43 |
| V. Olsson (Sunbeam) ... .. ... | 63 | 20 |
| G. Stead (Indian) ... ... . | 57 | 35 |

### The Third Morning.

Hopes that fine weather would prevail for the third morning of practice brought out about 60 riders, half of them being Senior men and the rest equally divided in the two smaller categories. Although the rain held off for a little while the hopes of the previous night shortly dissolved away before an increasing downpour. Again at 7 a.m., when practising finished, the light became brighter and the rain abated.

No startling times seemed possible, and the riders reported much grease on the corners and heavy mists on the mountain.

The following makes were out on the course: Sun, Levis, New Imperial, Sheffield-Henderson, O.K. Junior, Ivy, Diamond, A.J.S., Dot, Edmund, Douglas, Triumph, Indian, Norton, Scott, Sunbeam, Rudge, and New Hudson.

The best time by a Senior rider was 50m. 2s. by D. S. Alexander (Indian), while G. Grinton (A.J.S.) with 54m. made the fastest time in the Junior class, and C. W. Johnson (New Imperial) 59m. 20s. among the Lightweights.

### The Fourth Day.

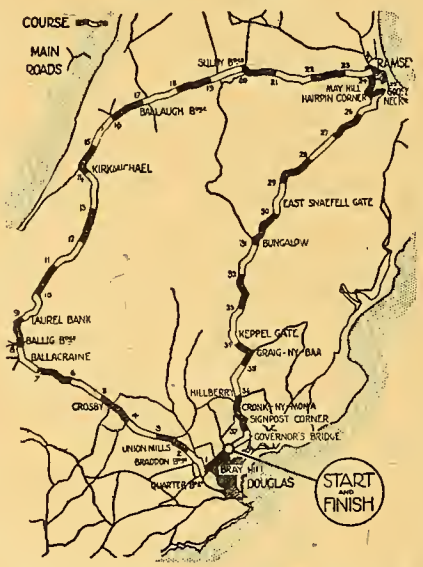
It may really be said the practising started in earnest on Thursday morning last, for by five o'clock over 70 machines were in readiness to go. They were despatched from Douglas with celerity, 75 men starting in less than 25 minutes.

A thick mist enveloped Snaefell, but, despite the gloom, the atmosphere was mild and still. The roads were somewhat sticky after the soaking of the two previous days.

Hugh Mason, who rides astonishingly well for one who has not been so long in the game, made an extraordinarily fast lap, taking but little over 40 minutes by amateur timing (56 m.p.h.), although the timekeepers declared it at 47. Brockbank, whose Cotton machine was not yet available, caused some amusement by starting on a standard o.h.v. Triumph borrowed from a private owner for the occasion and equipped with lamp and horn.

Some good cornering was to be seen at Hilberry and Cronk-ny-Mona, and some of the machines are going really well.

THE T.T. COURSE.



The A.J.S.s accelerate splendidly; the Scotts appear to be fast on the level; and Nortons, Sunbeams, and Indians all possess obvious speed. As yet the Rudge and Triumph machines did not appear to be exceptionally fast, but perhaps they were being taken round gently. The same might be said of the New Hudson, Beardmore, and Sun-Vitesse.

### 210 Laps by 90 Riders.

Dry roads favoured good speeds on Friday morning, and at 5 a.m. there was a big assembly of riders in the paddock. They were dispatched with celerity and watched with interest by large crowds which occupied most vantage points. 210 laps by 90 riders were timed. Unfortunately rain commenced again about 6.20, and the downpour gradually increased until late in the morning, when the roads were awash again; in fact, the weather was altogether dispiriting. Coulson and Scale made their appearance, and several new riders were out.

The lap times showed some improvement as the atmosphere was clear during the first hour. In the lightweight class the following times were recorded:—Simister (Diamond), 52m. 50s.; Young (Rex), 51m. 35s.; Tottey (New Imperial), 51m. 50s.; Padley (Sheffield Henderson), 52m. 38s.

In the Junior class Howard Davies made two fast laps—42m. 15s., and 43m. 40s. Another A.J.S. machine took about 44m. The Senior times were:—F. G. Edmond (Triumph), 42m. 30s.; Alexander (Indian), 42m. 40s.; Norman Black (Norton), 43m. 3s.; Ollerhead (Douglas), 43m. 50s., and Hollowell (Norton), 43m. 58s.

### Saturday's Practising.

Saturday morning saw the late arrivals on the course. Pullin (Douglas) and Le Vack (New Imperial) with the o.h.v. J.A.P. engine were out, and the Invicta and Francis-Barnett made their appearance.

Once again the Scott has a sporting chance of a place, if not a win. Langman is putting in some good speeds, and his cornering is superb; nervousness is a word obviously not in his dictionary.

Fast laps in Saturday's practising were made by: (Lightweights) J. C. Whalley (Massey-Arran), 52m. 42s.; R. W. Loughton (Francis-Barnett), 52m. 48s.; D. Young (Rex-Acme), two laps just over 51 minutes; and W. Handley (O.K.), two laps of 49 and 47 minutes respectively.

(Junior): T. M. Sheard (A.J.S.), two laps of 45½m. and 42½m.; E. Remington (Edmund), two laps of 45½m. and 47½m.; H. F. Harris (A.J.S.), three laps of approximately 47m., 47m., and 44m.; and R. Wilson (A.J.S.), 45m. 15s.

Amongst the Seniors, Bennett (Sunbeam) made a record practice lap of 41½m. Other good Senior times were: S. A. Crabtree (Sunbeam), 44m.; W. Johnson (Sunbeam), 44m.; G. W. Walker (o.h.v. Norton), 44m.

At the end of last week the best six lightweights were:—

R. W. Lynton (Francis-Barnett), 52m.; J. C. Whalley (Massey-Arran), 52m.; T. Simister (Diamond), 51m.; D. Young (Rex-Acme), 51m.; L. Padley (Sheffield-Henderson), 52m.; and W. L. Handley (O.K.), 46m.

The best lap times among the Junior riders were made by:—

H. R. Davies (A.J.S.), 42m.; G. Kelly (A.J.S.), 42m.; F. A. Longman (A.J.S.), 41m.; H. F. Harris (A.J.S.), 44m.; R. Wilson (A.J.S.), 45m.; and E. Remington (Blackburne), 45m.

### Last Monday's Practising.

The practising on the morning of last Monday was carried out under more chilly, damp and dismal conditions than ever, but over a hundred men started. Few covered more than a single circuit, however, for although fine weather was encountered on the Ramsey side of the mountain, thick wet mists enveloped the top stretches. Every make entered was on the course, the week-end having been a very busy time at the various garages.

This week will be devoted to finishing touches, but better conditions than prevailed last week are needed before the riders can thoroughly test their ability in fast cornering and open throttle down the mountain. Several machines after completing their first circuit on Monday last refused to re-start, and everyone agreed that they were wiser than the riders themselves.

# ON THE T.T. COURSE.

(1) W. Johnson (Sunbeam) on a morning spin. (2) An A.J.S. rider, A. Downie at Cronk-ny-Mona. (3) At Hilberry Corner; W. Woods, a reserve rider, on a 490 c.c. Norton.

# ROYAL RACE MEETING AT BROOKLANDS.

## A Brilliant Day on the Track. H.R.H. The Duke of York, Patron of the A.C.U., among the Entrants.

ON Saturday last His Royal Highness the Duke of York gave his patronage to a motor cycle race meeting at Brooklands. Accompanied by Wing-Commander Greig, M.V.O., he arrived at the track just after three o'clock, and was received by the Earl of Athlone, Col. F. Lindsay Lloyd, Alderman and Mrs. Duncan Watson, Messrs. A. G. Reynolds, H. P. E. Harding, and D. S. Parsons.

Princess Alice Countess of Athlone, Lady Mary Cambridge, Dame Ethel Locke-King, and Mr. Walter Kewlay (Secretary of the Middlesex Hospital) were also present.

Royal weather fittingly graced the first Royal race meeting ever held at Brooklands, and the brilliant sunshine seconded the efforts of the Essex Motor Club to secure a good attendance for the benefit of the Middlesex Hospital and the Industrial Welfare Society. The crowd was not up to the average of the ordinary car meetings, but was larger—and more fashionable—than a B.M.C.R.C. gate.

"Mixed" programmes of car and cycle races are never ideal, for the cycles are best watched from the fork and the cars from the stands in the paddock; as only foot transport is allowed between these two points of vantage nobody can watch all the events with ease and comfort.

### An Obstinate Car.

The car events were full of interest for motor cycling spectators. For example, Chitty-Bang-Bang refused to start at the parade of the second race; and on being well and truly pushed in motor cycle fashion a solitary blackleg cylinder fired once, and instantly converted the nearside pusher into a full-blooded negro. In the race the leviathan reduced one of her back cord tyres to the likeness of a fur boa.

The Duke of York chatting with S. E. Wood, who rode a 988 c.c. Trump-Anzani, entered by the Royal patron of the meeting.

Three motor cycle events figured on the card. The first, an 8½ mile race for solo machines not exceeding 500 c.c., attracted 40 entries, of whom 26 started. Emerson's Douglas was scratch, conceding 6s. to Judd on the o.h.v. Norton. The handicappers loyally gave the Duke of York's standard Douglas a good start, but S. E. Wood met trouble early in the race. The limit man was Glandfield on a Morris with 3m. 24s. start. A number of "clever" amateurs were awarded intermediate handicaps, and a shrewd judge remarked, "I shall not bet on this race; if any of those boys in the middle know anything they've got the race in their pocket."

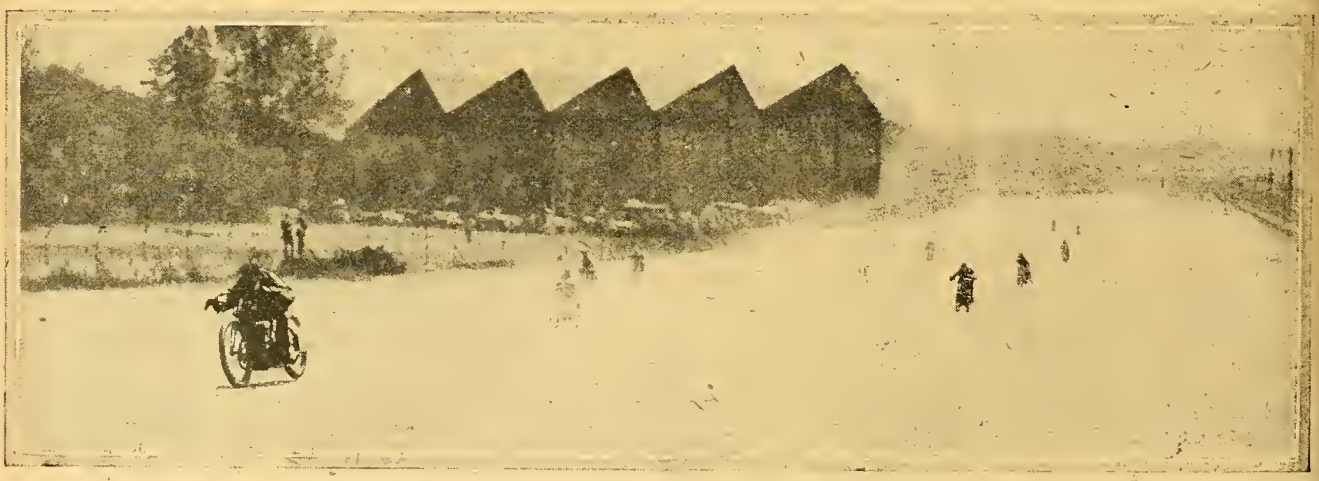
### Modern Racing Practice.

Very few machines even distantly approached standard specification. It is becoming quite Victorian to rely on only one carburetter for a twin-cylinder engine at Brooklands, and several of the Douglases used a pair, though Emerson still relies on one. Moser rode a machine compounded of an o.h.v. Triumph engine in a Duzmo frame. Bassett, another Cambridge undergraduate, leaves nothing unconsidered, and had even damped the coil springs of his saddle with bindings of elastic. When the betting opened, R. E. Dicker on the chain-driven Rudge was soon established a hot favourite, it being rumoured that he could lap at 75 m.p.h. The o.h.v. Norton ran him close in popular favour, and for once in history Brooklands bookmakers might be heard offering 100 to 1 against outsiders in a big field.

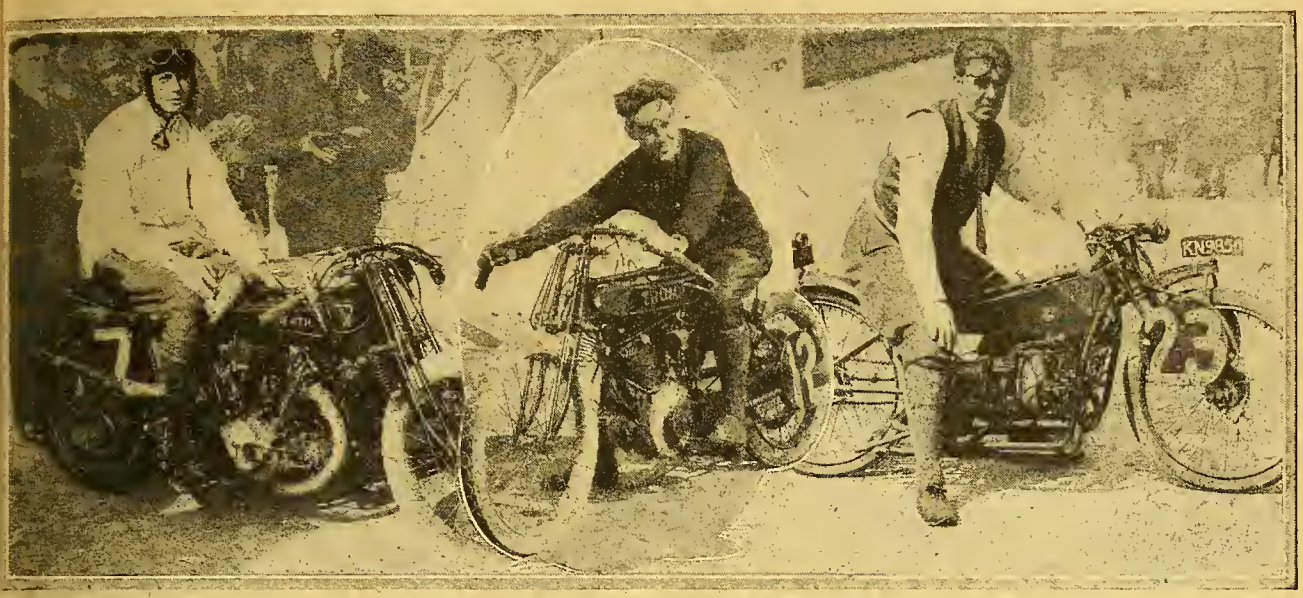
The race had not gone far before some of the middle division were noticed to be travelling so well that the scratch cracks had no chance of overhauling them.

Attention was distracted for a moment by a nasty-looking smash on the banking going up to the Members' Hill, where Moser and Sinnott touched each other and fell: fortunately neither was hurt.

Meanwhile with the aid of powerful glasses it was clear that the Rudge



At speed in the 500 c.c. class. C. Moser (499 c.c. Triumph) leading the field.



WINNERS OF THE MOTOR CYCLE EVENTS.

I. P. Riddoch (998 c.c. Zenith-Blackburne), winner of the Essex 3 lap passenger handicap.

J. Hall (748 c.c. Trump-Jap), who won the Duke of York 3 lap Senior handicap.

G. Maund, who, on his 398 c.c. A.B.C., beat many famous riders in the 3 lap Junior handicap.

(1m. 24s. start) could win if it could stall off one determined challenger from the rear. This it failed to do, and its pursuer turned out to be Capt. G. Maund, who, after being hotly criticised for the speed which he credited to his A.B.C., demonstrated his tuning ability by a comfortable victory. As S. J. Bassett's A.B.C. does a standing start lap at 70, enjoyed 16s. start from Maund, and was beaten by 100 yards, the latter's speed is evidently very hot for a privately-tuned mount. Nevertheless, the Rudge may be said to have come back to its old speed form, for Dicker did a flying lap in 75.2 m.p.h., which augurs well for the T.T. Emerson finished sixth.

1. G. Maund, 398 c.c. A.B.C. Speed, 71¾ m.p.h.
2. R. E. Dicker, 499 c.c. Rudge.
3. S. J. Bassett, 398 c.c. A.B.C.

The Duke's colours—scarlet jersey, blue stripes and sleeves—were borne on a Trump-Anzani of 988 c.c. in the 1,000 c.c. solo event. It enjoyed 18s. start of a sister machine ridden by Col. Stewart, and a Royal victory was quite hoped for, but Wood's luck was once more out. There were 17 starters, the two A.B.C. machines being heavily penalised for their earlier success. The race proved a runaway affair. Hall's Trump-Jap waltzed through the half-dozen men who started in front of it, and travelled much too speedily to let the backmarkers come up. On the last lap the rider peered round anxiously to see where Temple on the Harley was lying, and perceiving that no khaki blob was coming up with a wet sail, he eased off, actually riding one-handed for a few yards. Two Douglases hunted him home, but failed to concede the set starts.

1. J. Hall, 748 c.c. Trump-Jap, 72½ m.p.h.
2. J. Emerson, 494 c.c. Douglas.
3. S. L. Bailey, 494 c.c. Douglas.

The passenger race brought a motley crowd to the post, including six four-wheelers—Nash's G.N., a Salmson, Crouch, A.V. (side-by-side two-seater), Bleriot-Whippet, and a 760 c.c. Mathis car driven by Mrs. Percy Butler. As the latter was allotted a start of 3m. 45s. from the G.N. (scr.) in the programme, it was promptly made a hot favourite at 2 to 1 in a field of 17 starters.

Bookmakers and backers alike remained oblivious that the handicappers, discovering Mrs. Butler had fitted aluminium pistons, or some such aid to speed, had docked her start to 2m. 57s. Eventually her car stopped in the first lap. The field included plenty of quality—the G.N., Temple's Harley, De Lissa's famous M.A.G., and Harry Martin on an 8-valve Morgan with two carburetters; there were also a number of rather raw amateurs, more than half the entry stopping altogether before the 8½ miles were covered.

When the men got away, a middle-marker, distinguished by the glitter of his aluminium sidecar, was visibly cutting down the long-start men and holding the backmarkers off without much difficulty. The glasses identified him as Riddoch, and his Zenith romped home by over a mile. Honest riding, this! Few men would have troubled to win by so much. The victory was so absurdly facile that many spectators, ignorant of the lap-counting arrangements at the fork, imagined that Riddoch had turned down the straight a lap too soon. Incidentally, this misapprehension indicates the difficulty of following a motor cycle event from the paddock. Riddoch broke the 5m. record.

1. I. P. Riddoch, 998 c.c. Zenith-Blackburne, 76¾ m.p.h.
2. J. A. Masters, 989 c.c. Harley.
3. G. de Lissa, 996 c.c. Motosacoche M.A.G.

The Duke of York personally presented the prizes. So concluded a pleasant afternoon's sport, in which the handicapping of the motor cycle races fell far short of that in the car events.

## SOUTH WALES SPEED TRIALS.

EXTREMELY successful speed trials were held by the Neath and District M.C. in the beautiful grounds of Morgan Park on Saturday last. There were many spectators, a record number of entries, and the racing was the keenest witnessed on this course for many years. The fastest time of the day was made by C. Sgonina (Special), in 27 7-20s. Results:

STANDING START.

275 c.c. GENERAL.—1, R. E. Thomas (New Imperial), 43s.; 2, Luther J. Davies (Diamond), 43 31-40s.

350 c.c. GENERAL.—1, Luther J. Davies (Cotton), 38 20-40s.; 2, Handel Davies (Diamond), 40 16-40s.

600 c.c. GENERAL.—1, C. Sgonina (Sgonina Special), 32 32-40s.; 2, Tan Parker (Sunbeam), 33 33-40s.; 3, Luther Davies (Cotton), 35 34-40s.

750 c.c. GENERAL.—1, C. Sgonina (Sgonina Special), 33 32-40s.; 2, Tan Parker (Sunbeam), 34 1-40s.; 3, H. H. Bush (Norton), 34 2-40s.

UNLIMITED c.c. GENERAL.—1, Tan Parker (Sunbeam), 33 33-40s.; 2, H. H. Bush (Norton), 33 29-40s.; 3, C. Sgonina (Sgonina Special), 34 12-40s.

FLYING START.

350 c.c. GENERAL.—1, Luther Davies (Cotton), 31 29-40s.; 2, Handel Davies (Diamond), 32s.

600 c.c. NOVICE.—1, J. Parry (Sunbeam), 35 6-40s.; 2, W. Nell (Martin-Jap), 35 31-40s.

600 c.c. GENERAL.—1, C. Sgonina (Sgonina Special), 27 20-40s.; 2, H. H. Bush (Norton), 28 14-40s.; 3, Tan Parker (Sunbeam), 28 24-40s.

750 c.c. GENERAL.—1, Tan Parker (Sunbeam), 28 16-40s.; 2, H. H. Bush (Norton), 28 28-40s.; 3, C. Sgonina (Sgonina Special), 28 36-40s.

UNLIMITED c.c. GENERAL.—1, C. Sgonina (Sgonina Special), 27 14-40s.; 2, H. H. Bush (Norton), 27 26-40s.; 3, Tan Parker (Sunbeam), 28 24-40s.

SPEED JUDGING.—1, R. Marsh, 1m. 31s., error 1s.; 2, H. Church, 1m. 28.9s., error 1.1s.; 3, E. Jones, 1m. 31.8s., error 1.8s.

FASTEST TIME.—C. Sgonina, 65.81 m.p.h.

# FURTHER DEVONSHIRE FRIGHTFULNESS.

## Two "New" Hills as difficult as Beggar's Roost in S.W. Centre Open Trial.

Some idea of the gradient and height of Linkem Hill is given by this view of W. Bray (490 c.c. Norton) and A. E. Tozer (499 c.c. Rudge) breasting the summit.

ALTHOUGH the weather was fine and the roads dry, last Saturday's Open Trial of the South-Western Centre A.C.U. was quite in keeping with its official designation of "sporting." Two new hills, Rock and Hunter's Inn Mule Track (Mannacott), and one old favourite, Beggar's Roost, were responsible for the majority of lost golds, but any one of the other observed grades, mostly unfamiliar to competitions, would have been difficult enough, had it rained, to have failed half the entry. As it was, there was an entire absence of freakishness about the route, and those who did not retain full marks have little cause for complaint; in most cases they did not deserve to.

On the whole the solo entries shone more brilliantly; the sidecars suffered considerably from wheel-spin. Again, a commendable proportion of the competitors were genuine private owners—the proximity of the T.T. obviously barred many of the regular trade men—and it was heartening to note that some of the very finest performances on the hills were made by the amateurs. There was, in all, an entry of just one hundred.

Starting at 9 a.m. from Exeter, the route very quickly left the roads found on the average map and seldom returned until within hailing distance of the Barnstaple lunch stop.

There were three observed hills, Bickleigh, Linkem and Templeton, and two watersplashes—both, so the officials thought, disappointingly low—in the first thirty miles, but although Bickleigh caused some uneasiness and the splash just before Templeton some traces of belt slip it was not until Rock Hill that the fun began in earnest.

Almost dead straight and with a maximum grade of 1 in 4 or 1 in 5, the latter acclivity was rendered difficult by a fresh-water spring which bubbled out on to the steepest portion and lubricated the surface from there to the foot.

### Two Sports Models Excel.

The star turn of the morning was K. Delve (499 Triumph), who came up at a wonderful speed without wavering one hair's-breadth from the straight path, but L. Stagg, on a long-stroke Sunbeam, was not far behind in the matter of pace. J. S. Rogers (500 James) and D. Phillips (998 Harley-Davidson) also made outstanding ascents.

However, no marks were won by fast times, and recognition must be given to all of the following for sure, if sometimes unassuming, climbs:—Mrs. Jansen (211 Ner-a-car), W. G. Churchill (348 Verus)—overtook and passed a slower rider very cleverly—H. F. Youngs (Diamond-Jap), A. C. Westlake (348 Rex-Acme)—looking frightfully bored—T. G. Blundell (O.K. Junior), E. W. Spencer (494 Douglas)—quite fast—F. J. Adam (490 Norton), J. E. J. Whittaker (499 Sunbeam), H. C. Jennens (500 James)—these two equally fast—A. H. S. Love (490 Norton)—after a delayed change down—W. A. Le Brun (499 Rudge), W. F. Burnell (398 A.B.C.), J. H. H. H. Veasey (498 Zenith-Bradshaw), E. H. Williams (499 Triumph), P. V. Hare (494 Douglas), J. Pruen (494 Douglas), F. A. Harris (557 B.S.A.), H. C. Bouchier (498 Zenith-Bradshaw), T. A. Slann (550 Triumph), L. Peters (633 Norton), E. H. Jones (550 Triumph)—on second gear for some way—H. Collins (557 B.S.A.), G. W. Anstey (550 Triumph)—another late change—R. O. Bellasis (Scott), J. Caslake, jun. (986 Brough-Superior), G. R. Claridge (550 Triumph), S. Jones (600 Humber), J. Wooler (349 Wooler), A. Milward (349 Wooler), C. L. Sprosen (293 Connaught)—cheered for worming his way past three failures—F. V. Wood (370 Connaught)—fastest of his team—J. F. Anderson (293 Connaught), S. Warne (350 Precision-B. and S.), E. L. Herring (550 Triumph), G. L. Morrish (499 Sunbeam), S. W. Easton (398 A.B.C.), H. H. Nicholson (496 Martinsyde), J. T. Bashall (678 Martinsyde), A. A. Symes (678 Martinsyde)—all the Woking machines being excellent—S. G. Wheeler (490 Norton).

Others of the soloists lost no marks here, but they were not imposing, and many more lost marks for footing—they were even less inspiring. G. R. Pettinger (269 Newton-Villiers) paddled; A. E. Tozer (499 Rudge) fell off without reason; E. C. Collins (490 Norton) ran into the ditch; J. P. Webber (481 Scott) charged the bank; J. E. Mellor (496 Lea-

**Further Devonshire Frightfulness.—**

Francis) ran alongside the whole distance; W. C. Treloggen (Indian Scout) footed and failed; E. Hichens (1,301 Henderson) claimed a baulk for his first failure, and then came up and fell off again; H. H. Robinson (349 Wooler) restarted nicely after a stop; A. S. Gray (349 Beardmore) was allowed a baulk, although the reason was not very obvious; and W. J. C. Pope (550 Triumph), coming up among the sidecars, bumped the bank, but got away without stopping his engine.

Few words are required to sum up the sidecar performances. All failed through wheel-slip except E. A. Wright (499 Sunbeam sc.) and A. G. Halson (pre-war Bradbury sc.), both unaided by Parsons chains, and four Matchless outfits, driven respectively by Mrs. Hardee, G. D. Hardee, E. O'Brien, and F. J. Ellis, and all using chains.

**A Mule Track.**

Barring a secret check at Mullacott Hill, Hunter's Inn Mule Track provided the first excitement of the afternoon. This hill is quite a valuable discovery, for it provides (1) a somewhat startling approach, which does not leave one much time to think, (2) a long bottom gear grind rising to nearly 1,000ft. above sea level, and (3) a still more unexpected and very acute right-hand hairpin near the summit. An hour at the last-mentioned point was not ill-spent, but our observations must be brief, for it was more a driving test than one of reliability.

Mrs. Jansen provided a curtain-raiser by failing to "find" her emergency low gear, stopping, and then overturning backwards—a great pity, for previously she seemed to have discovered gold medal form at last. Particularly neat turns were made by P. L. Mayo (249 Coventry Eagle), W. G. Churchill (349 Verus), W. E. May (269 Excelsior), E. W. Spencer (494 Douglas), E. H. Williams (493 Triumph), J. H. H. Veasey (498 Zenith-Bradshaw), K. Delve (499 Triumph), L. Peters (633 Norton), E. H. Jones (550 Triumph), F. V. Wood (370 Connaught), H. H. Robinson (349 Wooler), E. L. Herring (550 Triumph), H. H. Nicholson (496 Martinsyde), S. W. Easton (398 A.B.C.), J. T. Bashall (678 Martinsyde), and A. A. Symes (678 Martinsyde).

Although nearly twenty of the soloists lost marks at this point, usually for footing, none of the sidecars experienced any real difficulty.

Beggar's Roost, the next, and, if we ignore Countisbury, the last, test piece, was in excellent condition, and general surprise was expressed by the spectators at the number of failures; incidentally, it was the sidecarists' turn again this time. C. G. Clapshaw (349 A.J.S.) and A. C. Smith (247 Sun Vitesse) were early in need of assistance, and J. E. Mellor (496 Lea-Francis) repeated his strenuous sprinting stunt. G. H. S. Earle (349 A.J.S.), G. R. Dettinger (269 Newton-Villiers), H. C. Jennens (499 James) and J. Wooler (349 Wooler) all were obliged to use their feet.

Among the lightweights, Mrs. Jansen and the three Connaughts were as good as any; but the Martinsydes and D. Phillips's big Harley undoubtedly were far and away the speediest of all.

As we have already mentioned, the sidecars enjoyed very mixed luck. S. Hall (998 Rudge sc.) made an imposing climb after a bad baulk; J. Durant (633 Norton sc.) was particularly good; E. S. Powell (799 A.J.S. sc.), assisted by a very plucky elderly lady passenger, was slow but clean; Mrs. Hardee was perhaps least perturbed of the Matchless sidecar entry; and E. J. L. Strong (998 Harley-Davidson sc.), atoned for an earlier failure on Rock. G. H. Goodall's Morgan also was in excellent fettle.

**Deserving of Commiseration.**

Of the seven or eight failures, C. Foward, the driver of a pre-war single-cylinder Bradbury outfit, deserves especial commiseration; he would probably have made a clean climb had his gear lever not jumped into neutral.

The finish was at Taunton, and we are inclined to agree with those who said that a two-mile section of road under repair between Williton and that town was rougher than anything else in the trial. Even at 10 m.p.h. it certainly was a frame-smasher.

For a newly-formed, and consequently somewhat impecunious centre, the arrowing and general organisation were exceedingly good, and we have seldom encountered such an entire absence of grumbling or complaints in an open event. Next year's open affair in this neighbourhood should be well worth entering.

# A DAY OF HILLS AND HAIRPINS.

OPEN to all members of the Midland Centre A.C.U. the Redditch club's trial which took place on Saturday last attracted but 48 starters. Of these, 39 completed the course. Had it not been for T.T. preparations and certain other counter-attractions, the event would have drawn a larger entry, as it certainly deserved to do. The 124-mile course, starting and finishing at Redditch, included the best-known Cotswold Hills in the morning run, while some of the Clent Hills were tackled in the afternoon. In addition to this, there were four water splashes, a stop and starting test, and a flexibility test.

Though small, the entry was fairly representative, and at the start we noticed the first chain-driven 2¾ h.p. Raleigh, ridden by F. W. Viles, who, with his companions, W. H. Hadfield and Hugh Gibson, on belt-driven Raleighs, led the field throughout the day. The inclusion of unknown water splashes had the effect of producing some weird exhaust-pipe arrangements, and the twin copper pipes turned up vertically at the end fitted to H. Stretton-Ward's o.h.v. Triumph were particularly noticeable. W. E. Smith's Norton had been similarly treated, and W. Johnson's 2½ h.p. Allon had an exhaust pipe and silencer well above the chain stay.

Gambles Lane (Rising Sun) was the steepest hill in the morning trip, and since the surface was dry, the performances were monotonously regular. Sudeley and Willersey hills were ascended on the return trip to Redditch, lunch being taken at the Unicorn Hotel. Within a mile of the start of the afternoon run lay a wide water splash some 10 in. deep at its worst, and having a heavy mud bottom for the last few yards. Here several riders met their Waterloo. The Raleigh team obviously had previous experience, for they all followed the easiest line and made clean crossings. Shortly after came an acceleration on a very suitable hill. It was required that thirty yards should be ridden at not more than 5 m.p.h., after which lay a fast stretch to the crest of the rise.

During the afternoon Swan Hill, Gravel Pit, Beacon, Shut Mill, and Walton Hill had to be ascended, while a final water splash within a few miles of the finish accounted for four or five failures.

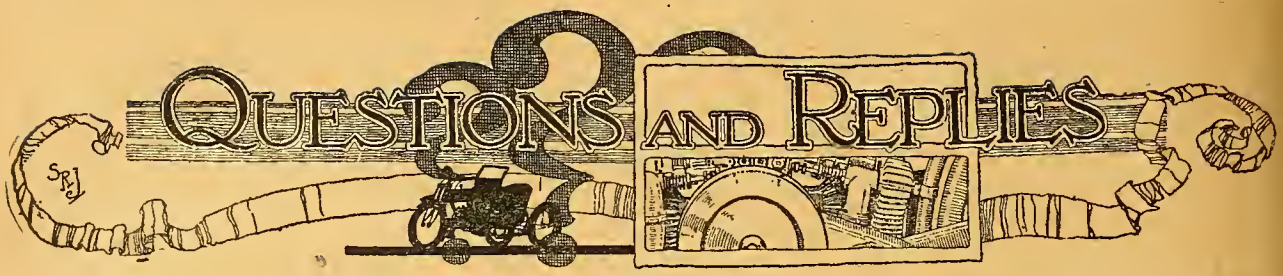
As the roads were dry the hills caused little trouble. F. Spouse (8 T.B.) treated the spectators to a fine display of acrobatics on Walton Hill hairpin, but, in spite of difficulties, he kept his engine running and climbed well. The course was well laid out and well marked; there were observers wherever necessary, and though in our estimation some of them were perhaps a little too lenient, the fault is so unusual as to be rather pleasing. Altogether the trial was a pleasant one which deserves larger support in future years.

## OFFICIAL SANCTION FOR IRISH ROAD RACES.

THE Irish Provisional Government has given its sanction to the holding of three motor cycle races in the Phœnix Park on Saturday, August 12th, in connection with the Irish Olympic (Fail-teann) Games, and has undertaken to provide the necessary number of soldiers to marshal the course of approximately five miles. The committee nominated by the chairman of the Southern Centre of the Motor Cycle Union has now finally settled the conditions of the contests, and the entry forms will be ready by the end of the present week.

The races are confined to Irishmen (birth, one year's residence, or Irish parentage), and there are no restrictions as to the types of motor cycles.

*Next Thursday—"The Motor Cycle" T.T. and 1001st Number—June 1st.*



A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, and whether intended for publication or not **must be accompanied by a 2d. stamped addressed envelope for reply.** Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects.

ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

### ERECTING A GARAGE.

I anticipate purchasing a motor cycle and sidecar, and as my house has a wide side entrance (6ft. 6in.), I propose either covering this in for a depth of about 10ft. or else placing a portable structure (6ft. high) immediately behind the side entrance gates. Have I the power to do this without reference to the local authorities, or is it necessary to obtain their permission? It is a corner house.—B.R.

Whichever structure you decide to put up it will be necessary for you to get the approval of the local authority.

### PISTON RING GAP.

I wish to lower the compression of my old clutch Triumph. Will it pull better at slow speeds? (1.) If so, what size packing would you advise me to use? (2.) When the piston ring is in position, what size gap should there be? —E.R.

(1.) Try a $\frac{1}{16}$in. washer of Hallite or some suitable material. The effect would be to make the engine less likely to knock, but you might lose a little power at high speeds. (2.) About six thousandths of an inch for the top ring and four thousandths of an inch for the subsequent rings.

### REDUCING COMPRESSION RATIO.

(1.) Does lower compression make an engine more flexible? (2.) Does it tend to reduce knocking on hills? (3.) Does it improve hill-climbing or the reverse? My machine, an 8 h.p. twin, is inclined to knock under load with plenty of throttle in hand, and owing to this fact it is impossible to use all the power it appears to have in reserve. —F.C.B.

(1.) It all depends upon the existing compression of the engine. If this is very high and the engine is inclined to knock, reducing the compression would tend to make it more flexible, and (2.) to stop knocking on hills. (3.) In this case it would improve the hill-climbing slightly, though the machine would not climb quite so fast, and would probably be incapable of attaining such a high number of r.p.m. The knocking of which you complain can probably be cured either by using less air or a mixture of benzole and petrol, say half and half.

### CURING FOUR-STROKING.

My 211 c.c. two-stroke fails to two-stroke when starting off in first speed; even after three to four miles it is a trouble to start up, and it four-strokes until I change into second speed. It takes full air when running. What size jet do you advise?—W.T.

Probably the jet is on the large side; you might try the size or two smaller. The engine should be timed in the following manner: *Variable Spark*: Place the piston exactly on top of the compression stroke and connect up the magneto with the points just breaking and the ignition lever fully retarded. *Fixed Spark*: If for a hilly country, set the piston $\frac{5}{16}$in. before the top of the stroke; if for a flat country, $\frac{7}{16}$in. from the top of the stroke. When in these positions the points should be in the act of breaking.

## Important Dates.

**Tues., May 30th—Junior Tourist Trophy Race.**
**Thurs., June 1st—Senior Tourist Trophy Race.**
**Fri., June 2nd, and Sat., June 3rd—M.C.C. London-Edinburgh Run.**
**Mon., June 5th, to Sat., June 10th—Royal Scottish A.C. Light Car Trial.**

### DIRECTION OF MAGNETOS REGARDING ROTATION.

A question has arisen whether a magneto is clockwise or anti-clock—is it viewed from the driven end or the contact breaker end?—E.J.P.

The direction of rotation is obtained by viewing the magneto from the driving spindle end.

### EXTRA AIR TAPS AND THEIR EFFECT.

I have a 1918 4 h.p. Triumph which will take full air. (1.) Would it be advisable to fit an extra air inlet in the form of a compression tap on the induction pipe? (2.) Would I get greater mileage p.g.? (3.) Would I get more speed? (4.) Would I be able to coast downhill with the throttle shut, and not suck oil so much from crank case? —P.H.

(1.) This would be quite in order if you can ensure it being airtight when shut. (2.) You might get rather more miles to the gallon if your carburetter was adjusted on the strong side. (3.) The same remarks apply as regards speed. (4.) Yes, this is so.

### BENDING COPPER PIPE.

I have a length of 1¼in. copper pipe which I wish to use as an exhaust pipe for my motor cycle. Can you advise me as to the best way of bending this?—E.A.F.

The most satisfactory way is to fill the pipe with molten lead. It will then bend quite easily if the copper has been properly annealed by bringing it to a good heat and cooling it suddenly by plunging it into water.

### A MAGNETO CUT OUT.

Can I fit an ignition cut-out to my two-stroke (Thomson-Bennett magneto); and is the use of a cut-out detrimental in any way to either the engine or the magneto? —F.C.T.

Buy a magneto switch from any accessory firm, fit this to the handle-bars and connect it by means of a piece of low tension wire to the terminal on your contact breaker cover. If the contact breaker cover has no such terminal, procure one from the magneto manufacturers. The use of a cut-out and switch should be in no way deleterious to the engine or magneto.

### HEAVY OIL CONSUMPTION.

My 1919 490 c.c. Norton requires about a pumpful of oil every three to four miles, otherwise it refuses to climb hills, gets hot, and loses its compression. A hissing noise can be heard from the piston when the engine is turned over. The cylinder is not scored, and I recently put in new rings. (The oil used is one of the very best brands.) Can you tell me the cause of this excessive oil consumption?—J.H.C.

'erhaps the particular oil which you are sing is not quite suited to your engine, nd we should advise you to write to the akers asking their opinion as to the best il to use. We assume, of course, that ou have made quite sure that the piston s not unduly worn, and that the cylinder as not become oval; if the latter has appened new piston rings would not cure he trouble. Have you also made sure hat the oil pump delivers a full charge?

### CHAIN ADJUSTMENTS.

(1.) After about 300 miles I adjusted the chains of my 557 c.c. B.S.A. according to the instructions in the makers' book, as there was a whirring sound from the aluminium chain cases. When the chains are moved I find that at times both chains will tighten and then slacken again, and the whirring noise is still present. I thought that chains only tightened and slackened when they were worn badly or on worn cogs.—W.H.L.

(1.) It is difficult to imagine what causes the sound of which you complain; a machine of this type which we used was free from all transmission noises, except a certain amount of clashing from the shock absorber at very low speeds. Presumably you have made sure that the chains do not touch any part of the cases, and that the gear box is properly charged with oil. Adjust the chains so that they are correct at their tightest point; it is very seldom that chains are uniformly tight at all positions even when new.

### CHOOSING A MACHINE.

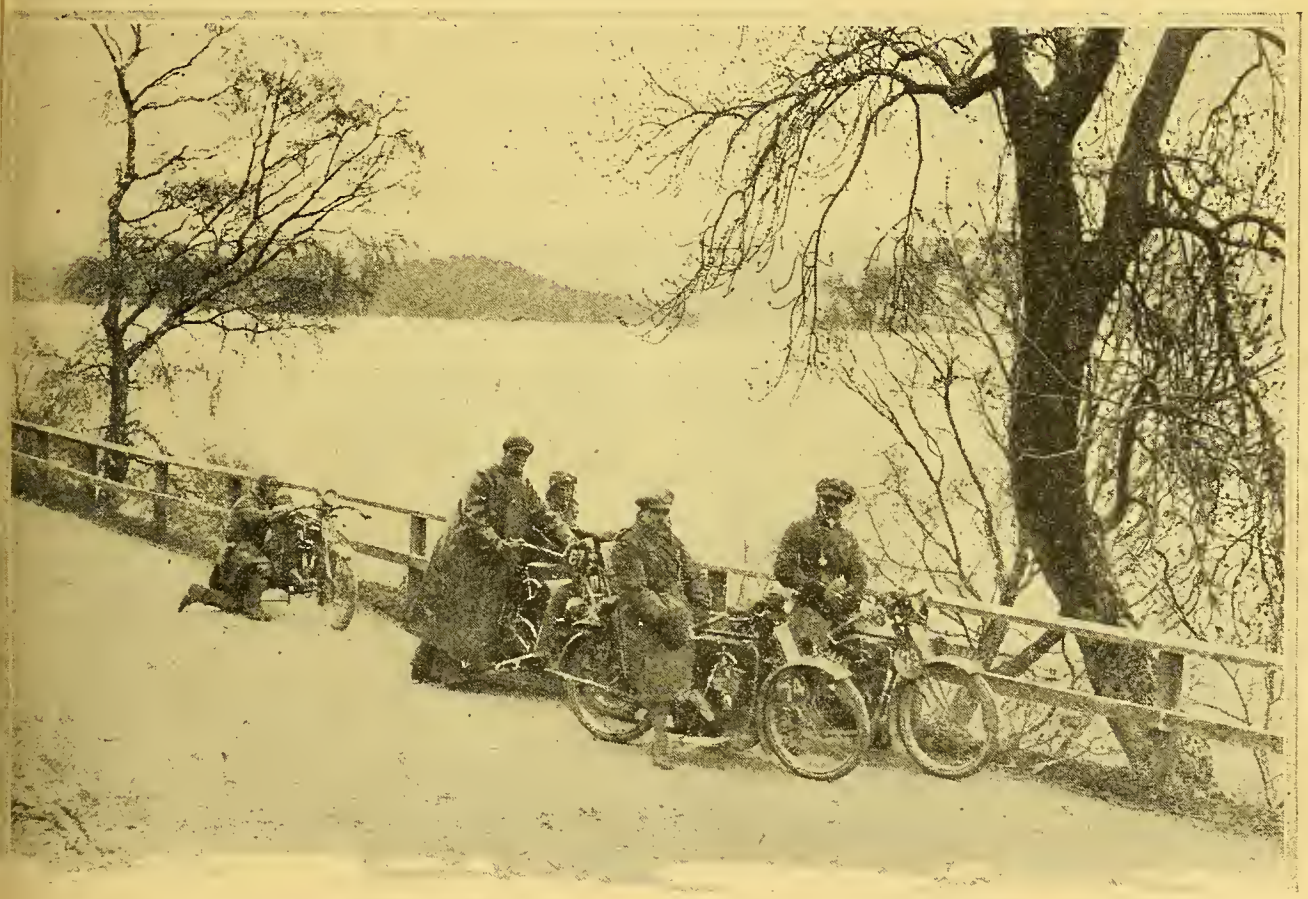
Will you give me advice on the purchase of a solo motor cycle for everyday use, to go backwards and forwards to business? I know absolutely nothing of motor cycles, having only used a pedal cycle up to now, and the distance I have to go is six miles each way, with only one hill, not a very steep one, so you see I only want quite a lightweight.—W.A.

A single-geared two-stroke machine should answer your purpose. Of course, a two-speed machine would be preferable, and in this class your choice is practically unlimited. For all-the-year-round riding an electric lighting set is strongly to be recommended, and such equipment can be supplied with almost every lightweight two-stroke on the market.

### TWO-SPEED GEAR RATIOS.

Will you let we know the gear ratios on my machine, which has a countershaft two-speed arrangement similar to the P. and M. gear? The engine-shaft has two sprockets both of 18 teeth and the countershaft has two sprockets, one with 40 teeth and the other with 28 teeth, and one belt pulley with 1in. belt, which gives a gear of 4½ to 1 with back-driving wheel. The driving rim on the back wheel is 20in. in diameter. I would like the top gear to be 5¼ to 1.—A.E.J.

Presumably, the countershaft pulley of your machine is of 7in. diameter, although you do not give this necessary information. If this size is correct your present gear ratios are 4.5 to 1 and 6.3 to 1. If you wish to have a top gear of 5¼ to 1, you will need a 15T sprocket on the engine-shaft driving to a 30T on the countershaft; the low gear will, of course, remain the same.



The Scottish "Six Days" does not consist of all hard riding. Competitors had time to appreciate the beauties of the country at certain points. Here are D. B. Calder (248 c.c. New Imperial), G. K. Hubbard (248 c.c. New Imperial), D. Parsons (992 c.c. Matchless sidecar) and J. D. Porter (269 c.c. New Gerrard) on the banks of Loch Ness.

A weather proofed machine in a Trial. Commander Herbert's B.S.A. sidecar in the recent Works Trial held by the B.S.A. company. There were 73 competitors.

### STARTING DIFFICULTIES.

I have purchased a 1920 500 c.c. single and sidecar second-hand and find it very difficult to start. There are no air leaks in the induction system. (1) The cap and gauge covering over the air inlet on the carburetter are missing, exposing the throttle and air slides (B. & B. carburetter). Is this partly the cause? (2) The tappet clearances are somewhat large, about $\frac{1}{8}$in. Would that contribute? What is the correct clearance, cold?—W.J.M.B.

The trouble in starting may be due to the congealing of the oil in cold weather. If there are no air leaks at the induction pipe unions these may occur through the inlet valve guide, which may be worn, in which case one of the many proprietary devices on the market might be fitted and would probably cure the trouble. (1) This may be a contributory cause, because the absence of the gauze allows more air to reach the carburetter. (2) The tappet clearances are ridiculously large; they should be about the thickness of the blue cover of *The Motor Cycle*.

## EXPERIENCES WANTED.

*Readers' replies to questions published under this heading should be addressed c/o The Editor, "The Motor Cycle," Dorset House, Tudor Street, London, E.C.4, when they will be forwarded direct to the querists concerned. Requests for experiences should be accompanied by a stamp.*

"B.P." (London).—4¼ h.p. Beardmore-Precision solo.

"C.E.A." (Birmingham).—Folding sidecars.

"R.A." (Eastbourne).—2¾ h.p. A.J.S. and 2¾ h.p. Raleigh.

"N.S." (Mont.).—3½ h.p. Norton with sidecar.

"M.R.M." (Edinburgh).—Stuart Morris tube protector on rigid frame machine with 650×65 mm. tyres.

"S.H." (Brighton).—3 h.p. A.B.C. with sidecar.

"K.S.J." (Dereham). — Montgomery spring fork.

"Y.Y.Z." (Newport).—A.B.C. and Scott with sidecars.

"H.H." (Repton).—348 c.c. o.h.v. Sheffield-Henderson; also 595 c.c. Indian Scout.

## SPARKLETS.

### Electric Lighting by Dry Battery.

A little time ago we made reference to the excellent dry battery lighting sets for sidecar outfits and motor bicycles supplied by Siemens Bros. and Co., Ltd. Under tests the makers have found that at the end of five weeks' use the illumination at the finish of a two-hour period was rather below the standard of the ordinary type of bulb, but further periods of lighting at a diminished brilliancy were obtained for another week. We are also assured that these batteries are quite capable of providing the required current for full illumination over extended periods of several hours continuously.

### A Price Reduction.

A reduction in price of the three-speed model 3½ h.p. Corona has been made; it is now listed at £65 by the Meteor Manufacturing Co., Ltd., 98, Tollington Park, London, N.4.

### Hints for Chain Users.

We recently referred to the Brampton booklet on the maintenance of chains; this is to be obtained from Brampton Bros., Ltd., Oliver Street, Birmingham.

### Catalogues Received.

A. F. Lewis, Engineer, Charlestown, Weymouth. Leaflet devoted to the Lewis epicyclic two-speed gear for the countershaft of machines up to 3½ h.p.

Douglas Motors, Ltd., Kingswood, Bristol. A handbook devoted to the 496 c.c. Sports Douglas, containing fully descriptive running and maintenance instructions.

A HARDY ANNUAL. Some of the competitors in the 17th annual London—Coventry—London run organised by the North West London M.C. This event was described in last week's issue.

# -HARLEY-DAVIDSON SUPERIORITY

***is the reason that we receive so many letters of which the following is typical:***

Surbiton, 1/5/22.

It may interest you to know that it is just two years ago that I took delivery of my 1920 7-9 h.p. Harley-Davidson combination, and the really wonderful service that it has given me impels me to let you know a few details.

I am a rider of many years' experience, having driven most leading makes, but this is the first Harley-Davidson I have had. I can also add that I can now appreciate the truth of a saying that I frequently hear, viz., "Once a Harley rider—nothing else will do."

I can honestly say that, in all my motor cycling experience I have never had a machine that, for all-round reliability, comfort and efficiency, could compare with my present mount. I have covered over eleven thousand miles and am still using the original rear chain (one new front chain), have never had a puncture, and am still riding the original Goodyear tyres which have never been removed from the rims since I bought the machine.

After two years of the finest motor cycling experience one could possibly enjoy, you will not be surprised, perhaps, to hear that I propose shortly to take delivery of a 1922 Harley-Davidson.

"Once a Harley rider. . . ."

Yours faithfully (Signed) WALTER SCOTT.

# MISCELLANEOUS ADVERTISEMENTS.

## PRICES.

DVERTISEMENTS in these columns rst 12 words 3/–, and 3d. for every ad- nal word. Paragraphs of under 8 words charged double rate. Each paragraph is ged separately. Name and address must ounted. Series discounts, conditions, and al terms to regular trade advertisers will noted on application.

stal Orders and Cheques sent in payment for rtisements should be made payable & Co. IFFE & SONS Ltd., and crossed sury Notes, being untraceable if lost in sit, should not be sent as remittances.

l advertisements in this section should be mpanied with remittance, and be addressed he offices of "The Motor Cycle," Dorset se, Tudor Street, London, E.C.4. To re insertion letters should be posted in to reach the offices of "The Motor Cycle," he first post on Friday morning previous to day of issue. Advertisements that arrive late for a particular issue or that are rded out will automatically be inserted in following issue unless accompanied by uctions to the contrary.

ll letters relating to advertisements should e the number which is printed at the end of advertisement, and the date of the issue hich it appeared.

he proprietors are not responsible for clerical rinters' errors, although every care is taken void mistakes.

## NUMBERED ADDRESSES.

r the convenience of advertisers, letters may be essed to numbers at "The Motor Cycle" Office. this is desired, the sum of 6d. to defray the cost of ration and to cover postage on replies must be added he advertisement charge, which must include the s Box ono, c/o "The Motor Cycle." Only the number ppear in the advertisement. All replies should be essed No. ooo, c/o "The Motor Cycle," Dorset House, r Street, London, E.C.4. *Readers who reply to Box No. tisements are warned against sending remittance through ost except in registered envelopes; in all such cases the / the Deposit System is recommended, and the envelope d be clearly marked "Deposit Department."*

the case of motor cycles offered for sale under a box ber, as it is unusual for these to be sold without first inspected by the intending purchaser, advertisers will tate business by embodying in their advertisements mention of the district in which the machine ad may be seen and tried.

## DEPOSIT SYSTEM.

rsons who hesitate to send money to unknown persons deal in perfect safety by availing themselves of our sit System. If the money be deposited with "The or Cycle," both parties are advised of this receipt.

he time allowed for a decision after receipt of the is is three days, and if a sale is effected we remit the unt to the seller, but, if not, we return the amount he depositor. Carriage is to be paid by the buyer, but he event of no sale each party pays carriage one way seller takes the risk of damage in transit. For all sactions up to £10, a deposit fee of 1/- is charged; on sactions over £10 and under £50, the fee is 2/6; over and under £75, 5/-; over £75 and under £100, 7/6 on all transactions over £100, 1%. All deposit ters are dealt with at Dorset House, Tudor Street, don, E.C.4, and cheques and money orders should be e payable to Iliffe & Sons Limited.

he letter "D" at the end of an advertisement is an cation that the advertiser is willing to avail himself of Deposit System. Other advertisers may be equally rous, but have not advised us to that effect.

## SPECIAL NOTE.

Readers who reply to advertisements and receive no wer to their enquiries are requested to regard the ce as an indication that the goods advertised have ady been disposed of. Advertisers often receive so y enquiries that it is quite impossible to reply to one by post.

*"What's in a Name?"*

# ALEXANDER'S
## is
# THE HOUSE
## THAT AIDS ECONOMISTS

JUST think of the many ways of saving money by dealing in the right market for all your wants. We do claim that we can help the cash economist in his motor cycle purchase. Dealing as we do in most makes of motor cycles and many light cars, conducting exchanges, distributing wholesale throughout our territory, we probably reach a turnover unequalled by any motor cycle trader in Britain.

We are always in a position to take advantage of any special manufacturers' offers for cash, which we in turn are able to offer to our clients. We carry largest possible stocks, and naturally at the end of the Season we are left with large stocks of previous Season's Machines which must be cleared quickly.

Our exchange business fills our saloons with Secondhand Machines which, owing to our large turnover, we are able to offer to the public without too closely considering profit.

The moral is that if you are wishing to economise,

## ALEXANDER'S
## IS YOUR MARKET

NOW THE BEST ADVICE we can give you is:—

Drop us a short note, stating your exact requirements, whether it be a lightweight, a medium weight or a sidecar combination of any power. State the approximate power, the approximate price you can afford. Mention any special requirement or specification. Perhaps we might put these hints into headings:—

MAKE .....
POWER .....
2 or 3 SPEED .....
WITH CLUTCH or WITHOUT .....
KICKSTART or NOT .....
SOLO or SIDECAR .....
PRICE .....
ANY OTHER REMARKS .....

You will get a reply by return, putting a list of suitable Machines before you without including such as are not likely to interest you. Our advice will also be at your service, in your selection.

And remember—if we do strongly recommend any Machine to you—you can take our assurance and our guarantee that our name goes with the purchase. We are proud of that name and we wish to preserve it as our best advertisement.

## THAT IS YOUR SAFEGUARD
## THE NAME OF
# ALEXANDER'S

We have hosts of testimonials from clients, our business methods cultivate them. One purchase at Alexander's is like sowing a seed of corn. It brings others. We have sown seeds from Land's End to John o' Groats.

## 113-115, LOTHIAN RD., EDINBURGH
## 272-274, GT. WESTERN RD., GLASGOW

MANUFACTURERS' STOCK

MAKINKOT BRAND

*TO BE CLEARED.*

Fawn double texture, interlined rubber,

MOTOR SUITS

THESE suits are made of Fawn double texture cloth, interlined rubber.

The seams are cemented, sewn and taped; making these absolutely waterproof.

Will stand any amount of hard wear.

The jackets are made double-breasted, with belts and wind ruffs.

The Motor Leggings are made fastening with clips and straps, and have wind gussets in leg.

These suits actually cost over 30/- to manufacture without any profit, but we have several thousands to clear.

Every suit is guaranteed absolutely waterproof, and should these not meet entirely with your approval, we guarantee to return your money in full, if returned within seven days.

SPECIAL PRICE,

29/11 Carriage 1/- extra.

We have also several thousands heavy Twill Suits to offer. These are made of the heavy Twill used for making Motor Hoods, and are one of the finest suits made for motor cycling, interlined rubber. They are made with sewn and cemented seams, and taped, also the seams of these suits are striped, making these garments absolutely waterproof, and we are prepared to give a guarantee that these are absolutely impossible for water to penetrate through. The Motor Leggings are made in the same way with wind gussets, fastening with clips and straps. The Suits are in sizes 34, 36, 38, 40, 42 and 44 chest, lengths inside leg are 27, 29, 31. Please state when ordering by post, measurements of chest, length inside.

50/- Carriage 1/- extra.

Orders to be addressed—

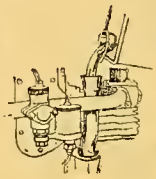
# DOUGLAS SPARES

**I guarantee to send any part by first post; being on the spot, if it is not in my huge stock I obtain the same day. Try my return post service.**



**EXCEPTIONAL QUALITY**

**Metal-armoured Tool-bags.** Two straps. Beautifully constructed and reinforced. Large size, for 4 h.p. Douglas, **10/6**, usual price, 20/-; 2¾ h.p. **7/6**, usual price, 11/-. A very limited supply. Money back if not satisfied.

**PATENTED TWIN RINGS**

15 per cent. increase in power, hold compression indefinitely, prevent carbonising, reduce oil consumption and reduce friction. All the racing men and trial riders are now using them. 4 h.p., **1/8**; 2¾ h.p., **1/6** each. Insist on having them fitted.

**A NEW TWIN RING PISTON**

Scientifically designed to prevent distortion. Four strengthening webbs and radiating fins, gudgeon pins supported correctly. Much lighter than standard pistons, yet double the strength. Piston with rings and gudgeon pin, **14/6**. J.S. writes: "I fitted the new pistons, and was astonished at the speed and power increase."

**ZOOM! ZOOM!!**

Are you Zooming it? This lovely exhaust pipe gives a lovely Zoom note and provides an expansion chamber many times the cylinder capacity; it silences without back pressure. The most efficient system yet devised; over 2,000 sets already fitted. Beautifully finished in polished copper plate, **30/-**. Nickel plated, **33/6**.

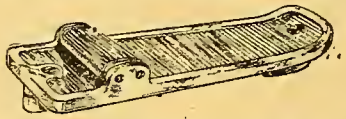
*The Spring in its normal position.*

*The Spring heavily loaded. Movement 4 inches.*

*Showing how the top leaves absorb both shocks and rebound.*

**UNBREAKABLE SIDECAR SPRING. GUARANTEED FOR 12 MONTHS.**

Double the comfort. Actual photographs reproduced showing the wonderful 4in. movement of the spring. You can practically turn this spring inside out, and it will return to its normal setting without fracture. Its secret is in its self shock-absorbing qualities, and it works both ways, thus taking the rebound, which is also absorbed by friction. Have one fitted to your chassis, and you'll be surprised at the added comfort. Price **17/6**.



**The Tony Combined Footboard and Footrests** *(Patented)*.

Made in burnished aluminium; polished edge, non-slipping surface, solid rubber pads, ideal riding positions and keep the boots clean. Adds greatly to the appearance of any Douglas. Substantially made and unbreakable. Price **30/-** per pair.

COMFY Sidecars, strong underslung chassis, coach built body, bulbous back with locker, quick detachable fittings, Clincher tyre; price 18 gns.—Comfy Sidecar Co., Leytonstone. [3079

SPRING Wheel, girder axle, Middleton, cost £24 1921, fits left-hand Indian or other 28×3 machine; good reason; £8; evenings; chassis only.—39, Westmead Rd., Sutton. [8837

CANOELET 1921 Sporting, K4, 12 gns.; brand new light-medium Henley, 13 gns.; good medium underslung coachbuilt, 9 gns.—Peter Gordon, Ltd., 110, Upper Richmond Rd., East Sheen. [9305

HAWK Sporting Sidecar, new March, 1922, hardly used, dash, Auster Triplex screen, 3-way switch, step, fit any machine 4h.p. to 8h.p.; nearest £25.—Hansford, 56, Queen Anne St., W.1. [9113

LANCASTER Sidecars.—Superb coachbuilt sidecars complete from 14 gns.; bodies only from 4 gns. A good selection in stock. Call and inspect.—The Lancaster Motor Co., 158, Norwood Rd., West Norwood, S.E.27. 'Phone: Streatham 2541. [3328

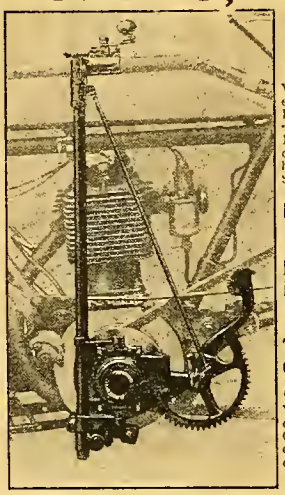
PARAGON (patent) Folding Sidecar saves storage, has 7 years to its credit, and has proved itself absolutely reliable. Fits any make of motor cycle, and, when folded, combination will pass through a 30in. doorway. Call and see it demonstrated.—Wincycle Co., Ltd., 236, High Holborn, W.C.1. [0388

LIGHT Car and Motor Cycle Engineering Co., Ltd.—Medium touring, complete, £15/15. Heavy touring, complete, £21. P. and M. sidecar, as new, £10. Touring sidecar complete, £4. Box carrier, complete with Mills-Fulford chassis, £5/10.—26, Tulse Hill, Brixton. 'Phone: Brixton 1292. (½ minute from Brixton Skating Rink.) [9824

DOUGLAS Chassis, shop-soiled bodies, special offer, £11/10; P. and M. outfits, new bulbous back bodies, fittings, etc., £14; outfit for Triumphs, B.S.A.'s, etc., new bodies, £15; lightweights, complete, brand new, from £11/10; 2-seaters, complete, from £14; extended payments. Write for particulars. 'Phone: Brixton 1585. Robini Manic. Co., 1 and 3, Tulse Hill, Effra Rd., Brixton, S.W.2. [9650

OLD Man Hep has 1,000 Douglas underslung chassis, renovated and complete, to suit all makes of machines, for £5; or fitted with a brand new Douglas type bulbous backed body, for £10/10 (these bodies are upholstered with good quality Rexine, but require a last coat of paint); this has been left for travelling on rail; send for photo, enclosing stamp. We cannot be beaten for our prices. 'Phone: 1958 Brixton. (See Body column.)—19, Wilcox Rd., South Lambeth, London, S.W.8. [5035

## GRADO, LTD.



Special Prices.

**Kick-start Model £6.**

Variable gear, free engine, kick-start. Here is our world-famed kick start Model for all machines from 3 to 10 h.p. Delivery from Stock.

**Plain Model £5 0 0.**

**Lightweight Plain Model £4 5 0.**

**Two-stroke Countershaft Model £8 8 0.**

Variable gear, free engine, handle start Complete with chain, both sprockets and starter.

*Postage Free.*

### The Grado Concentrix Valve Grinder.

**Grinds Valve Absolutely Central.**

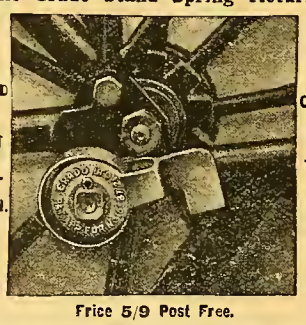
**VALVE CAP and SPARKING PLUG SIZE.**

American and English Threads.

**PRICE 6/6** Post Free

**Requires No Effort. No need to take off Cylinder.**

### The Grado Stand Spring Return.



STAND CANNOT FALL DOWN.

ORDER ONE TO-DAY.

**Price 5/9 Post Free.**

### The Grado Valve Facer.

*Postage 1/- extra*

**Price 20/-**

**LONDON: 26, Cross St., Hatton Garden, E.C.1.**
**NORTHERN & MIDLAND ORDERS: 66, Pershore Street, Birmingham.**

## RUNABOUTS AND CYCLE CARS.

REYNOLDS Runabout, shop soiled only; barg £60; 2 seats.—Helliar, Honiton. [8

MORGAN Grand Prix, as new, lavishly equipp £150.—52, Thornhill Rd., Islington. [3

CHATER-LEA Cycle Car, practically new; £60 exchange.—24, Albion Rd., Lewisham. [8

MORGAN 8h.p., M.A.G., 1920, o.e. £50 w extras; £155.—Durant, Bourne, Farnham. [8

1921 Carden, perfect condition, hood, scr lamps; £75.—Compton Works, Wickford. [6

G.N., touriog model, immediate delivery; £22 Ratcliffe Bros., 200, Great Portland St., W. [4

2-SEATER Car, complete, less engine; 18 g appointment only.—67, Mayola Rd., Clapton. [9

1921 De Luxe G.N., dynamo lighting, every ac sory; £130.—24, Balliol Rd., North Kens ton. [9

1917 G.P. Morgan-Jap, lamps, discs, etc.; £1 motor cycle part.—120, Sutherland Rd., C don. [9

2½h.p. 1915 De Luxe 2-stroke, overhauled, etc., perfect order; £18.—2, Windsor St., Leam ton. [9

1922 8h.p. Rover; cash, terms, or exchange Shepherd, Enfield Highway. Tel.: Walt Cross 31. [0

MORGAN De Luxe, W.C., J.A.P., small mile as new; £155.—93, Chiswick Rd., Lower monton. [8

BEDELIA.—The new 1922 model 8-10h.p., cooled or water-cooled to choice. Immed deliveries.

BEDELIA.—Air-cooled model, £185; water-co model, £195; side-by-side armchair seats, 3 sp and reverse, 5 detachable wheels, hood, screen, lam tools, jack and pump included; trial free.

BEDELIA.—Cash or easy terms; your old car motor cycle taken part payment.

BEDELIA.—Catalogue free from L. N. Palmer, Concessionaire for the British Empire.—Palm Garage, Tooting. [9

BLERIOT Whippet, dynamo, spare wheel, in top order; £85.—Grimes, 18, Bruton Place, B St., W.1. [9

1919 Carden (Triumph), 8h.p. J.A.P., Sturmey speed, almost new; £75.—77, Haverstock H Hampstead. [1

1920 8h.p. A.V. Bi-car, good condition; £70; change 3-speed Norton.—Eatough, Uckingt Shrewsbury. [8

A.C. Carrier, detachable wheels, fine body, perf order, drive away; bargain, £25.—89, East E Wandsworth. [9

MORGAN Runabout, Grand Prix model, 1913 h.p., water-cooled; £60.—Apply, G. Hyde, M tingham, S.E.9. [8

A.V. Monocar, 1921½, under 1,000 miles, good r ning order; £60, near offer.—Wood, Welburn A Headingley, Leeds [8

MORGANS.—Prompt delivery of 1922 mod Official agents. Trade distributors Kent, Ess City London.—Below.

G.N.—Immediate delivery of standard model; £2 dynamo lighting, etc.—Below.

G.N.—Dynamo lighting, horn, etc., choice of fo prices £125-£168; in guaranteed condition Below.

ROVER 1922 Standard and De Luxe Models, n in stock, dynamo lighting, etc.; prices £220 £245.—Below.

ROVER 1922 8h.p. Car, dynamo lighting, horn, e done few hundred miles only, as new through £197/10.—Below.

CARDEN Cycle Car, 1921, electric lighting, ho hood, etc.; £72/10.—Elce, Ltd., 15-16, Bisho gate Av., Camomile St., E.C.3. 'Phone: Avenue 554 [0

1920 2-seater Tamplin, £89/10; 8h.p. Morg hood, screen, £75.—Halifax Motor Exchan Horton St., Halifax. [9

T.B., 1921 (September), 10h.p. W.C. Blackbur 1922 starting, perfect; £140.—Kiog, Farm Kennington, Oxford. [9

GWK., 2-seater, recently overhauled, new f crankshaft, ball bearings; £90, near offer Moore, Selsey, Sussex. [8

1920-21 G.N., discs, spare wheel, dynamo lighti speedometer, well equipped; £130.—17, Charles Square, W.10. [9

£125.—1914 Morris-Oxford 2-seater, 4 cylinde W.C., 5 detachable wheels, beautiful conditi —King, Egrove, Oxford. [9

8h.p. Duo-Jap, variable gear, good tyres, relia equipped; must sell; £28.—Carter, Rose Ba The Mount, Shrewsbury. [1

## The Tourist Trophy Races.

ON pages 731-734 of this issue the Lightweight and Junior Trophy Races are described. At the time these lines were penned the results were not known, but sufficient evidence has been forthcoming from the practising to justify the anticipation that, given favourable weather conditions, an increase in speeds over those in last year's event would be attained.

That a 350 c.c. engine is large enough for the all-round requirements of the average solo tourist has long been acknowledged, but it is on account of its development in the Tourist Trophy Races that this economical power unit has come to be accepted by those who a few years ago regarded any machine under the 500 c.c. type as a toy.

As regards the Lightweight class, the known and long-standing attitude of *The Motor Cycle* concerning 250 c.c. engines has been made manifest by the results. We are never tired of fostering the claims of the true lightweight motor cycle. Just as the 350 c.c. engine of to-day replaces the 500 c.c. power unit of yesterday, so will the 250 c.c. machine ultimately attain the same position By increasing engine efficiency, the T.T. races automatically encourage the production of smaller and more economical motor cycles for the ordinary rider, for a small engine permits the embodiment of lighter parts all round, and a lighter machine means greater economy in first cost, upkeep, and taxation.

True, the lightweight machines in this year's races were no lighter than the large motor cycles which competed in the first T.T. race in 1907. This is a fact which sometimes is used as an argument against the modern mount, but anyone comparing the respective specifications of 1907 and 1922 machines will appreciate that, considering the equipment and the convenience provided by it, the weights of present-day mounts, while still capable of reduction, are fully justified by the results obtained.

### The Senior Race.

The Senior race, held to-day (Thursday, June 1st), promises to excel all others in point of interest. Not only is there an international element present, but competitors with machines from overseas are among the prime favourites for first place. The races, however, are not so international in character as the public would like them to be, and it is to be regretted that representatives of France, Belgium, Holland, Italy, and Switzerland are not competing, especially since the original object of the Tourist Trophy Races was to prove the speed and reliability of British productions in competition with those of other countries.

Bench tests and scientific research help considerably. Brooklands, too, does a great deal to improve the power and stamina of engines; reliability trials demonstrate the roadworthiness of the machines themselves, but the Tourist Trophy Races combine the best qualities of all these testing media.

## Whitsuntide.

WHILE all, or almost all, the well-known people in the motor cycle world are this week attending either the T.T. races or London-Edinburgh run, or both, there remains, as our fixture list of week-end events would indicate, a great deal of activity among the three hundred or so local motor cycle clubs.

The roads, too, will be teeming with tourists, and if the weather keeps to its promise all previous "records" in this respect should be broken. There will, indeed, be few pneumatic-tyred wheels which will remain stationary all this week-end; but those that are turned by motor cycle engines will be particularly active.

An index to the advertisements in this issue will be found on the page facing the back cover.

## Our 1,000th Number.

I ALWAYS regret that I wasn't on the staff when No. 1 was published, even if only as office boy. At that date, as far as I can remember, I kept my pot boiling with eloquent articles on poultry and pigeons in a contemporary, whilst my secret muse nurtured itself by publishing verse of mingled amorous and humorous tendencies, treatises on war, and fiction of deplorable badness. Only in September, 1904, was this page first inflicted on a long-suffering public. What a staff we had in those days! They deserve to have things dedicated to them like the Early Christians, for only a man of remarkable faith and vision could believe in the motor cycle, as it then was. The originators of *The Motor Cycle* were not martyred for their opinions, because nobody took sufficient interest to be violent about it; but chaff, ridicule, contempt, and financial loss were their portion. But they stuck to their guns, they played their part in fostering and guiding the infant sport and industry. To-day, when all the roads of the world echo to our exhausts, when the motor cycle is every youngster's passion and dream, when manufacture employs thousands, they have their reward; and one or two of them have lived to see it. Where's a prophet who can outline the condition of motor cycling at the date when we publish our 2,000th number? I don't know how the rest of the staff propose to solemnise the anniversary, but I am trying to get hold of the wreck of a front-driven Werner and a trailer, and go out for 100 miles.

## Back to the Island Again.

HEIGHO! Before these lines appear in print I shall have felt the wind blowing over the dirty surge of the Mersey, smelt the mixed odours of the Manx boat (cooking, hot oil—and other smells), met those nasty cross seas an hour east of Douglas, watched the peak of Snaefell rear itself up over—I hope—a smoothish sea, gazed with dismay at those innumerable slimy green steps towering above the boat at low tide, bribed a few of those pirates calling themselves porters to lug my "Ric-Umph" on to the quay, and then, hey, for the Races! Are any of the dark horses top-notchers? Will the Rudge "come back" as it did in '13 and '14? Has the dear old Norton's turn for a slab of luck come at last? Scott, Triumph, Sunbeam—oh, dear! I think I'll listen to Mrs. Ixion, and leave all my spare cash at home this year; it is no race to bet on.

## Training for the T.T.

FOR weeks past the wiser entrants for the T.T. have been busily training physically. For some training means no drinks, for others beer instead of whisky, whilst regular hours and less or no tobacco are common precautions. Golf and ordinary motor cycling are popular, while a few riders prefer boxing, tennis, and even cricket. What awaits a man in the Island depends largely on his employers. Most riders prefer to tune their own machines. One such told me that when his machine was handed over to him in the Island for a previous race, it would not climb a grade of 1 in 15, so that he and all the other jockeys of his stable had a gruelling time, lapping in practice on tourist mounts, and spending the rest of the day in making new cams, etc., with very makeshift tools, only to find that each new part must be improved upon. Finally, they figured quite prominently in the event. Other stables practically maintain a separate staff for tuning, and tell the riders to forget all about motor cycles (if they can) as soon as the course is closed for each practice day.

## Not There.

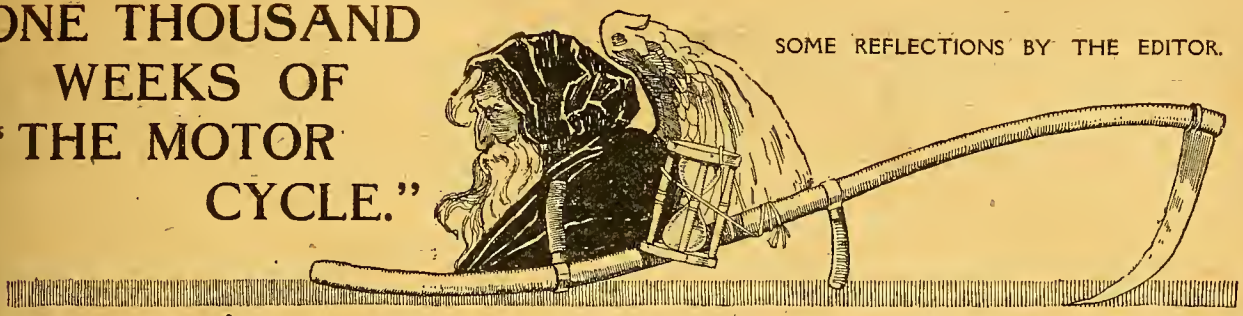
I WAS extremely disappointed at the absence of the Scott Sociable from the Scottish Six Days. Sidecars are notoriously tested to the limit in that arduous event, and ever since I tasted the indisputably beautiful and powerful running of the famous "Crab," I have wanted to see it pitted against the sidecars in what is little short of a test to destruction for all three-wheelers except the elect. If the A.C.U. reverse their 1921 policy and adopt a machine-smasher course for 1922, perhaps the Sociable will weigh in. My private acquaintances tell me that the Sociable is cheaper to run than most sidecars, that it does 70 m.p.g. anywhere, is light on oil and tyres, can be hosed down in five minutes, and does a hard season's work on one decarbonisation. In speed and climb it is pretty well up to the 1,000 c.c. class, in suspension and weather protection it is as good as anything on the road, and I always understand that its appearance was the only thing against it, like the defendant with the broken nose. But its sponsors cannot expect the world and his wife to recognise all these merits if they are studiously concealed under a bushel.

## A Featherweight Speedster.

HOW many people are aware that it is possible to buy a 60 m.p.h. machine, developing some 12 b.h.p. and substantial enough to hold together, which nevertheless weighs under 200 lbs. and only pays lightweight tax? I refer to the Scott Squirrel. I note that the makers employ a cute wrinkle for facilitating the handling of these machines by railway porters, when delivered by train. They thread a 16 in. bar through the top front sidecar connection lug, which completely obviates the usual trouble about finding a grip to lift the front end of the machine.

# ONE THOUSAND WEEKS OF "THE MOTOR CYCLE."

SOME REFLECTIONS BY THE EDITOR.



LAST week *The Motor Cycle* celebrated its thousandth consecutive number. Founded at a time when motor cycles were in their chrysalis stage, this journal has actively fostered and encouraged the development of a type of machine which we felt would eventually form the motor vehicle for the million.

The motor cycle industry has experienced serious trials, vicissitudes and set-backs. Originally modelled on the lines of a pedal bicycle, with its high frame, short handlebar and comparatively large wheels, it at first possessed a somewhat high centre of gravity which brought it into discredit on account of its consequent instability. The process of evolution towards its present form has been gradual, and we, who have closely watched its gradual perfection, sometimes marvel at our own early enthusiasm for its crude forerunners.

### Early Examples of Motor Cycles.

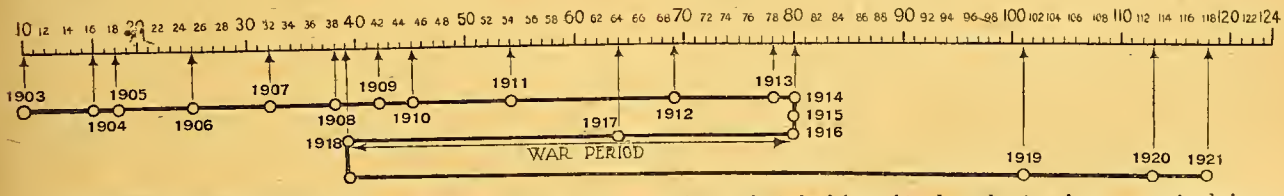
Originally motor cycles had only a single gear; their round or flat belts were unreliable. Gradually but surely the machine advanced towards perfection in reliability and comfort. Pedal gear was displaced by foot-rests and "kick" starters, rigid forks by comfortable spring forks, a stand to support the machine became a permanent fitting, luggage carriers were added when the machines were found to be capable of transporting the rider's necessary personal impedimenta, the old unreliable accumulator ignition system gave place to the entirely successful magneto; frames were lowered, change-speed gears—thanks to the campaign initiated by *The Motor Cycle* in 1906—became standard fittings; reliable and weatherproof forms of transmission made their appearance; and to-day we have a machine equal in reliability to any form of motor vehicle on the road, and one, too, capable of being run at an infinitesimal cost compared with that of the more pretentious car.

### The Passenger Machine Phase.

Hand in hand with the development of the mechanism and design of the motor bicycle itself, the solution of the passenger problem has progressed through its various stages. At first the demand in this respect was satisfied by a simple frail trailer. Subsequently the forecar, and next the tricar, became the vogue; latterly the sidecar has been introduced, and, despite its seemingly unmechanical layout, has proved entirely satisfactory and reliable, so much so that it is the most popular form of motor conveyance on the road to-day.

### A Case of Persistency.

On this auspicious occasion we may be pardoned for referring to the efforts that this journal has put forth in the directions indicated since Number One made its appearance on March 31st, 1903. We have often been paid the compliment that it was owing to the persistency of *The Motor Cycle*, together with the introduction of the high-tension magneto at a critical period, that rendered possible the great motor cycle industry that is in existence to-day. Fifteen or sixteen years ago motor cycles were in disrepute. They had failed to satisfy all at once the over-ambitious expectations that were entertained of them. They were but new to their work—a quite young introduction—but the daily Press, which is ever impatient of innovations, joined in a general condemnation of the seeming intruder. In this connection we have preserved among our records articles of a most damaging character that appeared in some of the newspapers of the time under such headings as "Death of the Motor Cycle," "Decline of Motor Cycles," "Failure of the Motor Cycle," etc. Years of long and patient advocacy and propaganda work were needed to live down these damaging aspersions and to counteract the prejudice that they created in the minds of the unreflecting public. For over six years *The Motor Cycle*, in face of such uncomplimentary references as those to which we have referred, stood alone, in hoeing, so to speak, a long furrow, by steadily fostering, encouraging, and assisting design, by free comment and constructive criticism, never wavering in our convic-



The continually increasing interest in motor cycles from the year 1903 onwards, may be judged from this chart showing the average circulation figures of "The Motor Cycle" in thousands. Incidentally the British Army's great call upon motor cyclists during the war is graphically conveyed by the figures recorded during 1914 to 1918.

**One Thousand Weeks of "The Motor Cycle."—**

tion that the motor cycle would win through and eventually triumph over its carping adversaries. Our optimism has been fully justified by results.

### Reaping Where Others Had Sown.

So soon, however, as the motor cycle had made good by becoming a practicable road vehicle, and the industry showed signs of attaining the huge dimensions it has now reached, those who had poured their scorn upon it and scoffed at it in the days of its weakness now bestowed their blessing, in order, as we suppose, to reap where others had sown. Be that as it may, the motor cycle industry has attained to the distinction of being in a position not only to provide the means of healthy recreation and enjoyment to hundreds of thousands of both sexes, but to give profitable employment to many thousands of workpeople. It is also a point worth noting that the persons who favour the motor cycle as a means of recreation or who use it in connection with their business are of the active and energetic type, upon whom almost more than upon any other section of the community, irrespective of social distinctions, the future prosperity and prestige of the British Empire mainly depends.

## TO THE READERS OF No. 1.

As a rule the first number of a new paper is accompanied by some sort of introductory explanation, we might almost say excuse, for its existence, but *The Motor Cycle* enjoys an exceptional advantage in this respect, as it has been established in response to a very widely-expressed desire. At the present time there is no journal which deals wholly and solely with the motor cycle and motor cycling, and this is the gap we have decided to fill in response to the general request to which we have just referred.

Motor cycling as a pastime is now firmly established, and its votaries are sufficiently numerous to claim a journal devoted entirely to the special subjects of interest to them. In its early days motor cycling was regarded either as a special branch of cycling or motorcaring; but it has developed so rapidly that it is impossible to deal with it adequately in a cycle or autocar publication, as there are many people within the ranks of motor cyclists who are not much interested in pedal cycles, and who are well aware that the motor car, even in its most inexpensive form, is entirely beyond their reach from a monetary point of view.

The main points of the policy of *The Motor Cycle* will be:

(1.) To give practical and useful information to motor cyclists.

(2.) To explain the working of the motor and every part of the machine in the clearest possible manner.

(3.) To describe new inventions and improvements.

(4.) To record all matters of interest in the motor cycle world.

(5.) To promote the exchange of ideas and useful information between motor cyclists

(6.) To reply to queries. *(See page 19.)*

(7.) To help the motor cyclist to get the utmost enjoyment from the pastime.

(8.) To bear in mind that many motor cyclists are not in receipt of large incomes.

(9.) To foster motor cycling in every possible way.

We say nothing about assisting in the development of the industry of motor cycle building, as it is agreed by all who understand the subject that the strengthening and fostering of the pastime must of necessity benefit the industry.

We do not believe in making great claims or promises, as we hope that *The Motor Cycle* and its policy, which we have attempted briefly to outline, will appeal at once to votaries of the pastime. It will not be our fault if this is not the case, and we shall always welcome suggestions from our readers. Whether they can be adopted or not, they will be none the less appreciated, and it will be our constant effort to improve and strengthen the paper in every possible way, so as to ensure its being more and more acceptable to its readers.

No. 1 necessarily lacks certain features which will characterise later issues; but we have determined to abstain from the objectionable practice too often followed of using "dummy" letters, queries, etc., so as to make a paper complete from No. 1. These features will develop naturally with the paper. They will not be simulated, but they will be heartily encouraged, as we believe them to be some of the most important sections of a medium devoted to the encouragement of a new pastime, and we feel sure we can depend on the cordial co-operation of our readers in these matters.

Page 1, No. 1, Volume 1.

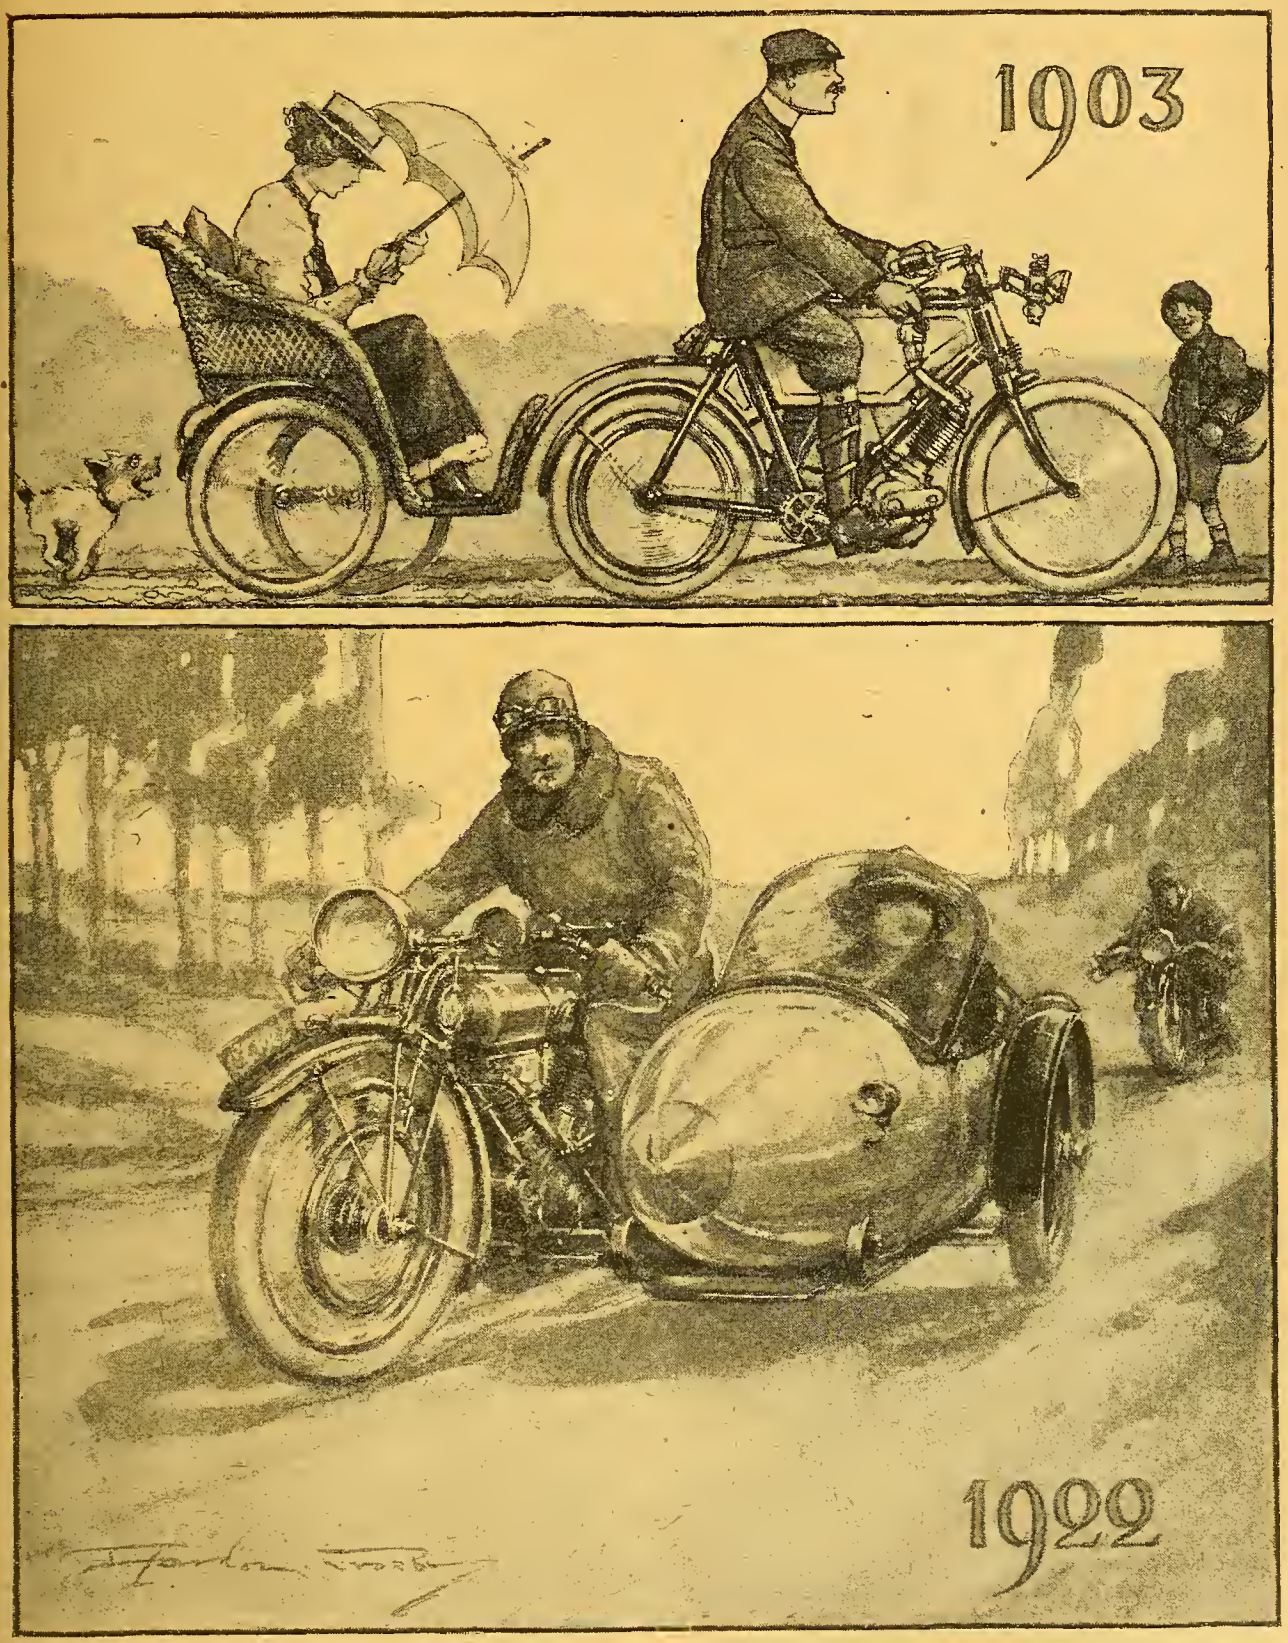
### An Essentially British Industry.

Besides all this, it is no small matter to be proud of that, by pertinacity in advocating the claims of, and focusing attention upon, the motor cycle, this journal has been the means of retaining for Great Britain an industry the products of which have a world-wide market. In other words, the motor cycle is an article in use the whole world over, and this country remains in unchallenged possession of the facilities for supplying that demand. While many other industries flag through foreign competition, the motor cycle industry more than holds its own. Possibly foreign countries may have been influenced by the pessimism of those who howled down the motor cycle in its early days, while manufacturers at home heeded our own counsel.

In peace time the motor cycle has been the means of training the minds of our younger generation in a mechanical direction, which proved of inestimable value to the country in time of war. Many of our most daring and resourceful airmen were recruited from the ranks of motor cyclists, whilst votaries of the single-track motor vehicle were found in every branch of the British Army, where their mechanical bent was found of the greatest value. Recognising the big part that motor cyclists were destined to play in the war, *The Motor Cycle* at the outset of hostilities opened a recruiting section, rendering services which formed the subject of a letter of warm appreciation from the Army Council.

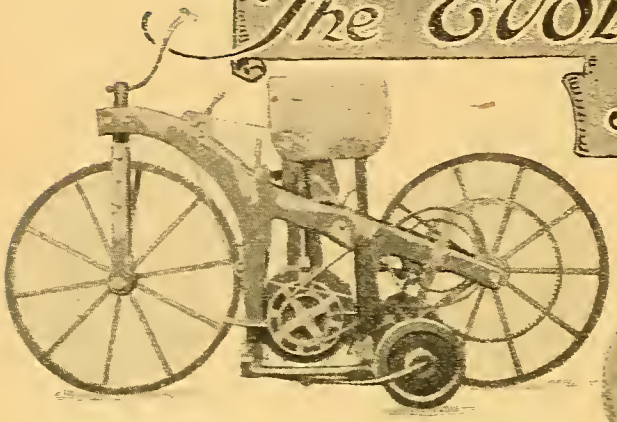
During the war the motor cycle replaced the horse as the mount for the despatch rider, and one successful campaign was carried out by an army mounted on the ubiquitous two-wheeler.

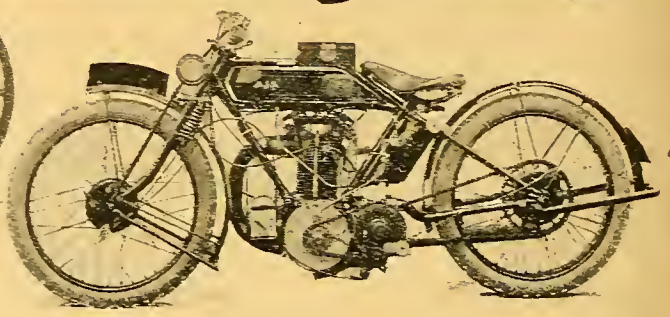
From small beginnings the motor cycle has grown to be part of our national life; from an exclusive coterie of about 10,000 riders in 1903, the number of actual motor cyclists registered in this country increased to the remarkable extent of over 370,000 by the end of 1921.



EVOLUTION.

# The Evolution of the Motor Cycle.

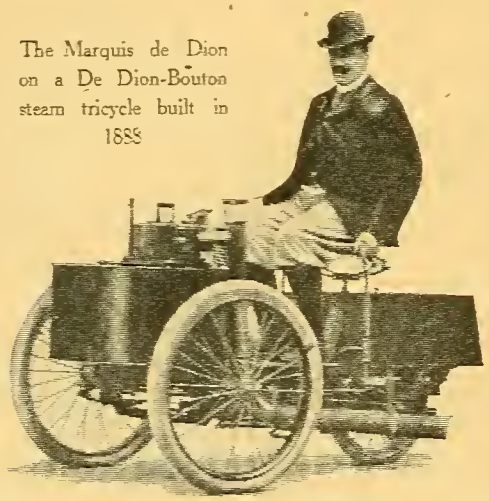




The first motor cycle, made by Daimler in 1885, compared with a modern T.T. mount—the A.J.S.

## Progress since 1885. An Historical Review. What will the Future bring?

TO a modern mind the oddest feature about the birth of the motor cycle is that it generally thrashed the prehistoric cars of that date in the leading competitions. This honour it sometimes shared with a steam omnibus invented by the Marquis de Dion, which derived its power from one of the boilers standardised for French torpedo boats, and

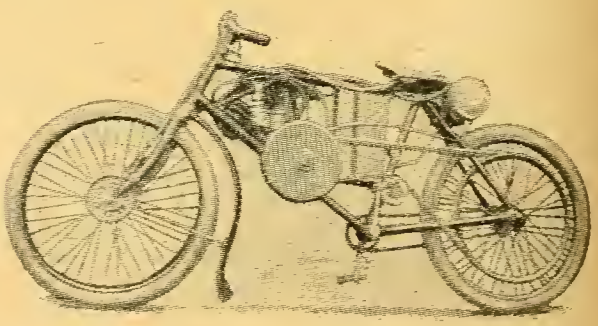


The Marquis de Dion on a De Dion-Bouton steam tricycle built in 1888

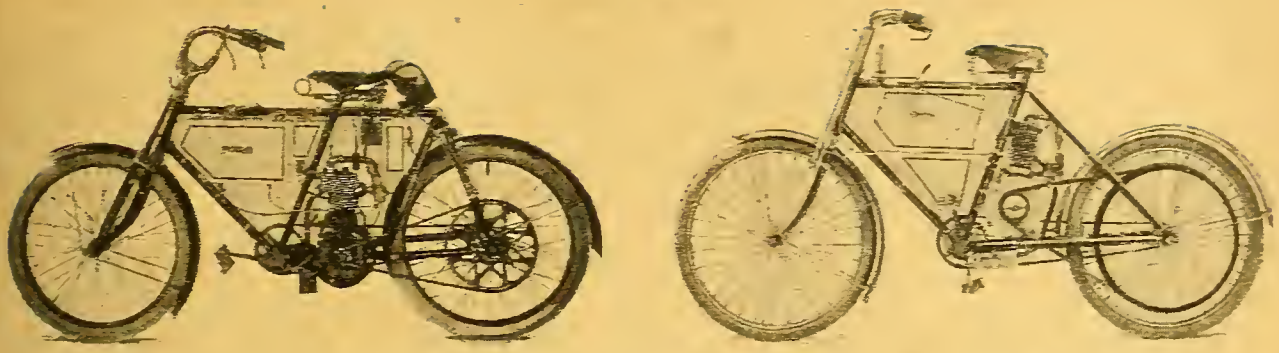
was thus less experimental than the average petrol vehicle.

Actual road vehicles were slow in appearing after Gottlieb Daimler invented his engines, and serious motor cycling commenced about 1895 with the Bollée tandem and the De Dion tricycle; Pennington's various motor cycles, notably a four-seated three-wheeler, of which the skeleton still adorns the conservatory of "The White Lion" at Cobham, enjoyed a great deal of publicity without ever "going into production," as we should put it nowadays. The De Dion tricycle had a small a.o.i.v. engine, mounted just behind the rear axle, which it drove direct through gears, and after a little wear it made almost as much noise as a threshing machine; pedalling gear was fitted and freely used, even against a wind on the level; oil was inserted by hand from a tin *via* a removable plug in the crank case; the carburetter was a small tank attached to the top tube, containing an inch or two of genuine 0.680 spirit, through which air was drawn; ignition was by a huge cylindrical non-trembler coil and dry batteries; the front brake was a spoon on the tyre, and the rear brake a band on the axle. From their first introduction these little machines were capable of nearly 20 m.p.h. on a good road, and were quite decently reliable.

Far more awkward to handle was the Bollée tandem, which had a very flabby engine laid horizontally along the rear chainstays. The frame was by no means rigid, yet it carried the bearings of the gear shafts. There was no clutch, and the rear wheel was bodily levered forward to slacken the flat belt whenever a free engine was required. When new the machine was drivable until the engine ran hot; when old, the gearshaft bearings were so vilely out of truth owing to frame distortion that the engine could not be expected to keep cool for more than a very few miles.



One of the early Clement motor bicycles with the small twin engine situated near the steering head.



1903 machines with their engines behind the bottom bracket. (Left.) The Bowden and (right) the Ormonde.

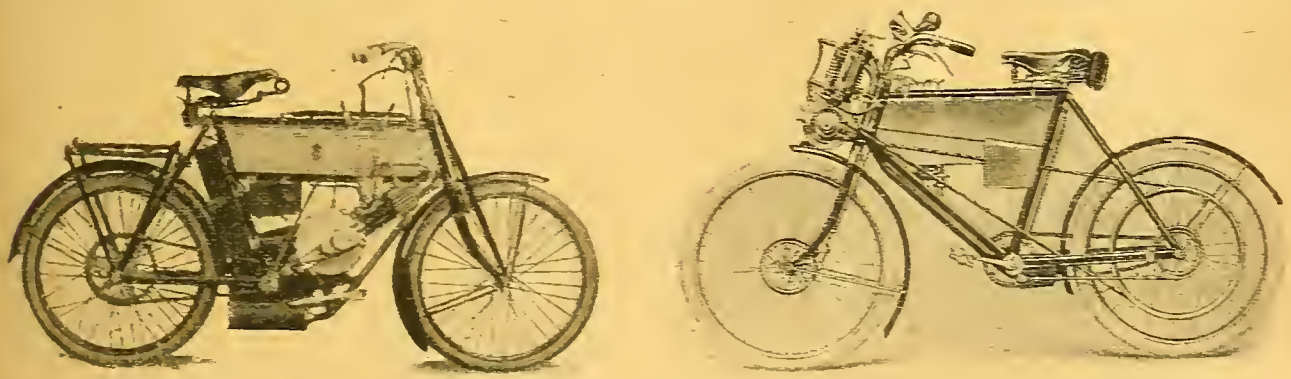
Meanwhile isolated motor bicycles began to appear here and there. Col. Holden produced a bijou four-cylinder, listed at about £75, with a tiny rear wheel driven direct by the connecting rods, if memory does not deceive me. I never had the pluck to buy one of these, but I was informed that they travelled at great speed for a few miles, after which a new back tyre was required. The Humber and Riley people turned out one or two machines, and the Hildebrand-Wolfmüller was exhibited, but frightened everybody who saw its jerky motion on the road.

### Earning Reputations.

Ere long three firms began to earn quite decent reputations. In France the famous Werner brothers produced a nice little bicycle, with an air-cooled engine mounted above the front mudguard, flanked by a wick carburetter resembling a biscuit tin, and a red-hot platinum tube used for ignition purposes; the drive was by a bootlace belt. Its most serious fault was top-heaviness, which caused it to lie down flat in the road at the sight of a spot of rain; the petrol then leaked on to the platinum tube, and the fire brigade appeared. In Belgium the Minerva people produced a tiny single-cylinder engine, attached by two clips to the front down tube of a light bicycle; rated at 1¼ h.p., it would be considered too small for a scooter nowadays. Presently the Singer Co. marketed both a tricycle and a bicycle, on which really creditable mileages were attained, Miss Muriel Hine being one of their first customers. Its power unit consisted of an auto-wheel, furnished with wide, dished aluminium spokes, and its reliability owed much to the Simms low-tension magneto. The auto-wheel was employed as the front wheel of the tricycle and the rear wheel of the bicycle, both being gear-driven; until vibration set up fatigue of the spokes, these machines ran regularly, though the noise and vibration were appalling.

### Early Britons.

Gradually the industry grew more stereotyped. The little Minervas were the first to make good. In England the 2¾ h.p. Excelsior, with an M.M.C. engine assembled into a splendidly built frame by Bayliss, Thomas, Ltd., set a new standard of power and workmanship. The Quadrant people worked on similar lines, producing first a 2 h.p., and then a 3 h.p. The Werner made an even better break, for in lieu of clipping the engine to the down tube they built it into the centre of the frame, though the correctness of their idea was not perceived for some time, as the Ormonde Co. elected to put their engine behind the saddle pillar tube. No sidecars yet existed, and passenger work was performed either with a two-wheeled trailing car carrying a wicker chair, or a fore-carriage slung between two front wheels. A few quadricycles were made, chiefly in France, though Dennis Bros., of Guildford, made a good example with the De Dion engine; the gear-driven tricycles died hard—they now had two-speed gears and engines with water-cooled heads, the best being the Ariel, which had its engine inside the wheelbase.



Early models of well-known machines. (Left.) A 1905 P. & M. which even at this early date had a two-speed gear. (Right.) The Enfield of 1902 with its engine over the front wheel but driving the rear wheel by means of a belt.

**The Evolution of the Motor Cycle.—**

By 1903, when *The Motor Cycle* was first issued, motor cycles were sufficiently numerous to claim their own governing body and a separate trial, instead of being sandwiched into car events. The Automobile Club formed a special motor cycle committee, and 100 miles were to be covered on each of ten days. The organisers were inexperienced, and their official garage was a small tent situated in a swamp within the grounds of the Crystal Palace. The Palace regulations forbade engines to be run inside the grounds, and the exit was up quite a steep hill. Twenty out of forty-three starters survived to compete in the concluding speed tests on the Palace track, where an average speed of 28 m.p.h. was attained, thanks to a liberal time allowance for tuning up after the road trial. Horseshoe brakes and belts were responsible for most of the roadside stops, for the engines of 1903, if weak, were moderately reliable. But the M.C.C. people ran the best trials at that date. They had gathered most of the keen men into their fold, and had fixtures nearly every week-end, and by 1904 machines were good enough for the first Edinburgh run to be held, though there was heavy betting against anybody getting through inside twenty-four hours. For some years vague regulations permitted this event to degenerate into something approaching a race. 1905 saw the *début* of the 3 h.p. Triumph, easily the best cycle built up to that date, though a few Northerners spoke heartily of the otherwise unknown P. & M., which actually had chain drive and a two-speed gear.

Year by year trials were stiffened up. In 1905 the Auto Cycle Club took us up Birdlip in the Six Days—there was no penalty for failure, and crowds of willing pushers were at hand. In 1906 the first End-to-End run was held, and three single-geared Douglas machines created a huge sensation. 1907 was a dead year, for the trade protested that the A.C.C. was going ahead too fast. 1908 produced the first Scott, with kick-starter and two-speed gear. In 1909 the Edinburgh Club did yeoman service to the industry by including lots of really bad hills in their first Six Days, and the A.C.U. offered a 25 mark bonus for clean ascents of test hills in their big trial. So every designer began thinking about variable gears, and if a miserably inadequate adjustable pulley was the first and most popular suggestion for a time, the tendencies at least were right. Recent comers to the sport will not credit how obstinately many makers, many riders, and many technical authorities combated the thesis that a decent motor cycle ought to be able to go over any main road under its own power.

Meanwhile, just as reliability trials emphasised the shortcomings of the bicycle itself, racing was slowly developing our engines. The pacing of push-bike records was the first racing opportunity of the motor bicycle, and the French used to turn out cumbrous monsters of over 20 h.p. Presently pure motor cycle races commenced at Canning Town and the Crystal Palace, Sam Wright, Harry Martin, Bert Yates, J. Crundall, and the Colliers being leading exponents. In 1904 we competed in an international race of 168

**The Evolution of the Motor Cycle.—**

miles at Dourdan. It was silly of us, for the French only gave us eight weeks' notice to prepare special machines under a weight limit of 108lb. Our team, consisting of a Quadrant, a J.A.P., and a Lagonda, was outclassed. The next year we got nineteen machines ready for an elimininating trial in the Island, most of them big twins, and all under 108lb. G. A. Barnes actually had a twin of 94 mm. × 100 mm. inside this weight. C. B. Franklin (J.A.P.) and Harry Collier were in the team, with Campbell on an Ariel; the International was run in Austria, and the native riders won with the aid of travelling sidecars full of spares.

Our humiliations in these international events had taught us the value of racing, and 1907 brought about the first T.T. race and the opening of Brooklands track. The lessons derived from such racing experience have unquestionably lifted our motor cycles to their present pre-eminence. The first Tourist Trophy race was a quaint business in all conscience. Thanks to the influence of the No. 8 hats on the Automobile Club Committee, it was run on a fuel ration, 1 gallon per 90 miles for singles, and 1 gallon per 75 miles for twins. Seventeen singles and eight twins started, Charlie Collier winning at 38½ m.p.h. At the finish the course was sufficiently littered with derelicts to make manufacturers study reliability. Brooklands did not see a motor cycle race till April 20th, 1908, when twenty-four machines started level, and a 9 h.p. Peugeot, geared 2⅝ to 1, was an easy winner at 63 m.p.h.

### Passenger Attachments.

Trials and races thus combined to produce decent bicycles with powerful engines, and the way was slowly being paved for a satisfactory passenger-carrier. The trailer, once so popular, was never more than a temporary makeshift. Never too safe, it was completely unsociable, and its unfortunate occupant was exposed to the maximum of noise, smell, and dust. The forecar or tricar had greater possibilities than have ever been realised, and it is extremely odd that no example of this form of three-wheeler except the Morgan can claim an existence of any standing. Originally the fore-carriages were detachable, and we used to detach them several times a week, for, on the one hand, we were anxious to take our girls with us whenever the girls could come, and, on the other hand, having only one gear, we found it worth doing an hour's work to improve climbing powers for a solo run. About 1906 tricars blossomed into regular three-wheeled cars, complete with gear boxes. The Lagonda was the best; most of the others were disfigured by bad workmanship or items of clumsy design. But they did not go at all badly. I used to climb hills like Sutton Bank with consummate ease and at a good speed long before I could be sure of getting up on a bicycle.

### Introduction of the Magneto.

The greatest single improvement ever introduced was the high-tension magneto, which I used, I believe, for the first time in the Edinburgh run of 1905. Prior to that date our ignition consisted of: (i) a shilling porcelain plug, which was never expected to last more than a few hundred miles; (ii) a 20 ampere-hour accumulator, stored in a compartment of the tank, from which numerous flimsy cables issued through small holes with knife-like edges; (iii) a coil, preferably of the trembler variety, because its buzz was an aid to diagnosing troubles; (iv) a contact-breaker operated by a cam on the engine, closely resembling a watch in the minuteness and number of its parts.

and made of substances which I can only describe as metallic butter. Nobody dreamt of tackling a run without a pocket voltmeter and spare screws and blades for the contact-breaker, and profiteers used to sell us German silver points camouflaged as platinum. So deep-rooted was my ignition cynicism that years elapsed before I dared travel without a large plush-lined box of magneto spares, none of which were ever actually needed.

Passenger enthusiasts will regard all-chain drive as an introduction of equal merit with the magneto. As a keen soloist I still regret the almost complete disappearance of the belt. Admittedly it could give plenty of trouble even on two-wheelers. Long after "bootlaces" and even built-up leather V belts became obsolete, the combination of a heavy storm and a terrific gradient has caused me great anxiety on belt drive. On the other hand, can any modern motor-cycling sensation quite compare with the old experience of adventuring oneself on a long tour amidst the mountains with a single-geared belt drive? The machine was light to handle and would climb excellently on a low ratio, while the adjustable pulley probably enabled one to gear down to 6½ to 1 temporarily—of course, the belt would not stand many miles on so small a pulley.

The climbing of hills is not the only uncertainty that has disappeared from the sport. Time was when we used to take the road with as many as three spare belts furled round various portions of the machine; a spare 8 a.h. accumulator in a rabbit pocket; a cheap German gas lamp on the bracket, and a cycle lamp in a box on the carrier; plus two pockets and one toolbag full of spare parts. We might get home the same day; we might not get home till late on the morrow. All this uncertainty was very thrilling, and the road stoppages were not the least enjoyable part of the proceedings, for there was almost always a chance to get going, whereas if we "pack up" in 1922 it is generally a case of waiting for a kindly Ford van to happen along.

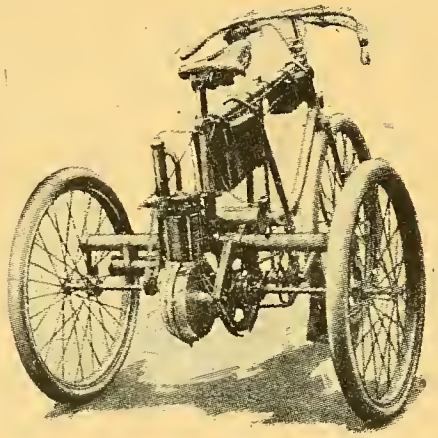
### The Modern Mount.

At the present time the motor cycle is so abominably perfect that serious trouble seems quite incredible until on some rare occasion it overtakes one. I personally start out on excursions of as much as two thousand miles into the wildest corners of Great Britain with no spare parts except a sparking plug, and I not infrequently return home with the virgin plug still under seal. So adequate are our machines that competitions have narrowed themselves down to three phases, two of which are entirely illegitimate. In one type riding is done to a split second schedule. In another the promoters' chief obsession is to multiply road surfaces on which 100-ton steel will unravel into its constituent fibres, or which would make vaseline feel like concrete. In the third type, pure speed decides the

**The Evolution of the Motor Cycle.—**

guerdon, and pure speed in these days demands a quadruple alliance, to wit, an engineering genius, an unrivalled plant, a syndicate with a profound pocket, and an unimaginative youth blessed with rubber muscles and a perfect gift of physical balance. How much better were the old days in which everybody had trouble, and he who fought it best came out on top.

It follows that competition work has very largely served its turn so far as the general progress of motor cycling is concerned. To-day the main tendencies of evolution point in other directions. Machines are very little more comfortable than they were twenty years ago, allowing for the pulverisation of our roads. We get bumped almost as much as ever. We still get dirty. Trusting to the new standards of reliability, we ride in winter and so we get rather cold. Then, as the pastime grows more and more utilitarian, hardy youngsters cease to be its only or its chief devotees. There is an increasing clamour for cheap, light machines suited for short-distance work in the hands of weak, elderly, or feminine owners. The scooter boom—silly and ill-timed—revealed the extent of this demand. Nothing looks specially like filling the gap, with the possible exception of the Harper Runabout, which is probably too expensive at present. Again, the problems of a passenger motor cycle have not yet been completely solved. A glance backward reveals the progress which has been made between, say, 1903 and 1922—the period of this journal's activities and influence. During these twenty years effort has been almost exclusively concentrated upon reliability, speed,



A De Dion tricycle of the type which several British manufacturers marketed in 1895.

A 1898 front driven Werner—a machine which all veterans are wont to quote as their first mount. It was capable of 16 m.p.h. on the level.

and hill-climbing. *The Motor Cycle*, as a disinterested observer, has made many suggestions, some of them remarkably fruitful—variable gears were a notable instance. But, broadly speaking, our suggestions have been listened to far more attentively when they were directly concerned with speed, climbing, and reliability, than when they affected weight, comfort, passengers, and price. Now that we have attained a miraculous standard of reliability; when we can climb any hill on a tenth part of our engine's output; the path of progress must swing in new directions.

**Finality?**

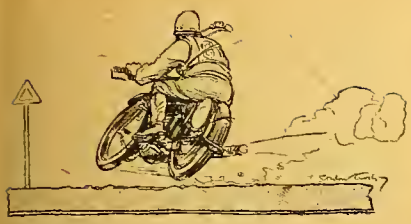
There are people who fancy finality has been attained. The motor cyclist of 1903 would have swooned with ecstasy if some fairy godmother could have dangled a 1922 Brough Superior before his eyes, shown him Pullin's Douglas "kilometring" at 100 m.p.h., or displayed a handful of chosen cracks creeping steadily up the Screw Hill. I have no doubt that if the readers of this issue could go to sleep till 1942, and then awake to see the current machines of that era, they would find equal progress had been made in the next two decades. By that time the "posh" mounts of to-day, perfect as we rank them, will seem crude and ridiculous, fit only to be consigned to some museum where man's earlier eccentricities, the front-driven Werner and the Bollée tandem, even now expectantly await them.

B. H. D.

## GUIDE TO ROAD CONDITIONS.

FROM time to time there appears in provincial newspapers a detailed statement of the condition of the roads in the counties within a reasonable radius. It is usually a useful guide to the state of the roads, but the western section appears singularly deficient in geographical accuracy. Under the heading of "Somerset" are the "Bristol to Gloucester" and the "Bath to Stroud" roads; except for a very few miles of the latter road, both these routes are in Gloucester. The Axminster to Bridport road, which is nearly all in Dorset, is given under Devon. Porlock Hill, which is in Somerset, is also placed under Devon.

Exactly why the routes "Brendon to Porlock" and "Brendon to Simonsbath" should be given, whilst no mention is made of the main roads to these places from Lynton and Lynmouth, is inexplicable; Brendon is only a tiny village which few motorists touch.



# THE T.T. RACES.

## Scenes During the Practising which Finished on Monday last.

The first corner on the course—Quarter Bridge. Located at the foot of Bray Hill, this bend calls for careful negotiation, but the road is fairly wide.

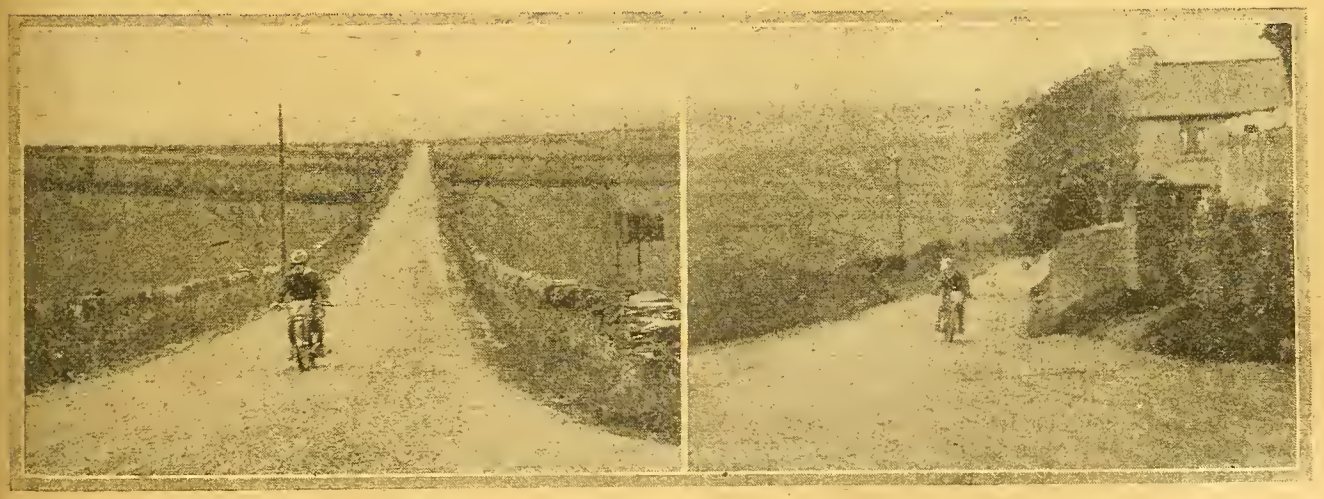
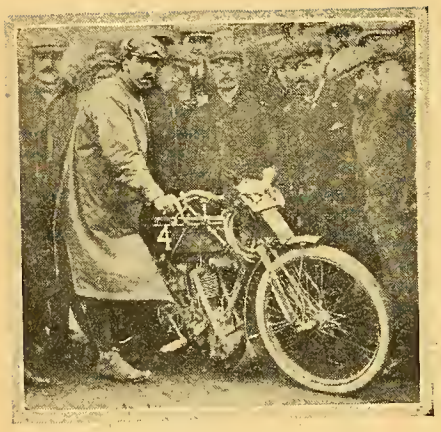
Enthusiasm is greater than ever this year, as is evidenced by this early morning crowd in the paddock during practising hours.



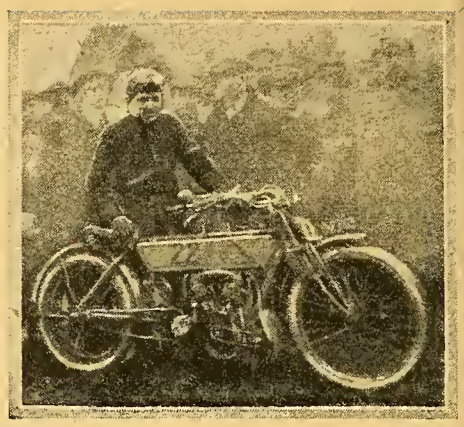
Junior competitors at Cronk-ny-Mona in the early hours.

# MILESTONES IN THE TOURIST TROPHY RACES.

## The Origin and History of this Classic Event.



C. R. Collier with his Matchless after winning the first T.T. race ever held—the single cylinder class in 1907. He also won the Senior event in 1910, averaging 50 m.p.h.



H. Rem. Fowler (Norton) who won the twin cylinder class in 1907. It is interesting to observe that in this first race the Matchless was a single and the Norton a twin.

NO motor cycle event throughout the whole world creates greater interest than the T.T.; its progress and results are followed with enthusiasm in every country.

It must not be thought that the T.T. was the first motor cycle race held in the Isle of Man. In 1905 the A.C.G.B.I., as the Royal Automobile Club was then called, had to find a suitable venue for the Gordon-Bennett race eliminating trials. England was out of the question; Ireland was willing to receive the club with open arms, but even Ireland had to bow before Parliament, and the chances of getting an Act passed to legalise the race were more than remote. Then the Isle of Man was considered. It was practically a foreign country with its own laws and its own Parliament, ready to legalise the closing of the roads, so a chilly, misty morning in May, 1905, witnessed the first I.O.M. motor cycle race, but so inefficient were the machines of those days that the event ended in a complete fiasco.

### Origin of the Motor Cycle T.T.

Previous to 1907 a car Tourist Trophy Race had been successfully organised and run by the A.C.G.B.I. It owed its origin to the enterprise of Lord Montagu of Beaulieu, who hit upon the idea of a race for "more or less" touring cars, and offered a valuable trophy to encourage the development of fast touring cars.

It is thus proved that the Auto-Cycle Union owes a debt of gratitude to the parent body. Now probably the boot is on the other leg, since from the first event in 1907 to the present races in 1922 the A.C.U. has never missed a T.T. (save during the war), while the R.A.C. has only held its Isle of Man races spasmodically; consequently for its events this year it is probably only too glad to learn at the capable and efficient hands of its prosperous offspring. Prompted by the success of the original Tourist Trophy and the important effect it had on motor car design, the late and ever-respected Mr. H. W. Staner, manager-editor of *The Motor Cycle* and editor of *The Autocar*, the soundness of whose judgment was acknowledged by all in the motoring movement, suggested to the A.C.U. (then the Auto-Cycle Club) at its annual dinner in 1906 that a motor cycle Tourist Trophy should be held. That this is so is officially acknowledged by the A.C.U.

WINNERS IN 1921.

Senior—H. R. Davies (A.J.S.), average speed, 54·49 m.p.h.

Junior — Eric Williams (A.J.S.), average speed, 52·11 m.p.h.

Lightweight—D. G. Prentice (New Imperial), average speed, 44·82 m.p.h.

### Donor of the First Motor Cycle Tourist Trophy.

On the way back from the last International Cup Race, held in Austria in the summer of 1906, the matter was ardently discussed by the Marquis de Mouzilly de St. Mars, Messrs. G. F. Sharp and H. Collier, sen. Monsieur de St. Mars, as he now prefers to be called, a Frenchman by birth and an Englishman in sympathy, gave the first trophy, modelled on the lines of the original given by Lord Montagu—a silver figure of Mercury standing on a winged wheel.

### Early Conditions.

Next ensued a long series of discussions on the proposed conditions of the race, and it was eventually decided to follow Automobile Club rules and limit the speed by petrol allowance: one gallon for 90 miles being allowed for singles, and one gallon per 75 miles for twins.

One "leg" of the old circuit is still retained in the present course, and that is the section from Ballacraine to Kirkmichael. The actual start was from St. Johns, close by the Tynwald Hill, on which new Manx laws are proclaimed at dawn. Ballacraine corner was a left-hand bend.

It is curious to read that in the first race C. R. Collier pedalled and one man

PAST WINNERS OF T.T. RACES.

J. Marshall (Triumph) Single, 1908. | H. Reed (Dot) Twin, 1908. | H. A. Collier (Matchless) 1909. | P. J. Evans (Humber) Junior, 1911. | O. C. Godfrey (Indian) Senior, 1911. | W. H. Bashall (Douglas) Junior, 1912. | F. A. Applebee (Scott) Senior, 1912. | Hugh Mason (N.U.T.) Junior, 1913. | H. O. Wood (Scott) Senior, 1913.

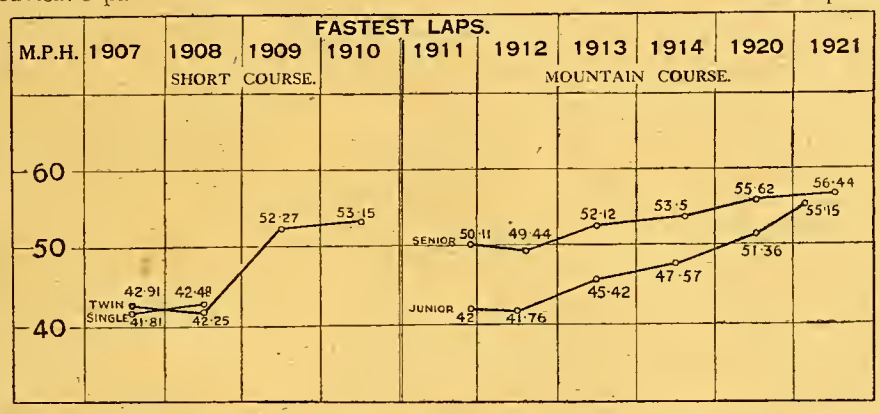
dismounted and ran on the Creg Willey's Hill. Next year pedalling was prohibited, and the fuel allowance was reduced.

### First Scoring Board.

In 1908 a scoring board was erected. The next year, 1909, marked a milestone on the road of progress, cubical capacity being utilised to limit the speed; single 500 c.c., twins 750 c.c.

We now enter into a new chapter of T.T. history. In 1911 the lightweight 350 c.c. machine, began to assert itself and demanded recognition. A second trophy was provided, and the Junior T.T. first saw the light.

C. G. Pullin (Rudge) Senior, 1914. | Cyril Williams (A.J.S.) Junior, 1920. | T. C. De la Hay (Sunbeam) Senior, 1920. | R. O. Clark (Levis) L'w'ght, 1920.



### Change Speed Gears

A very important result of the more difficult course now used was the rapid development of change-speed gears, no single-geared machine coming nearer than within sixth place of the winner in the Senior Race of 1911.

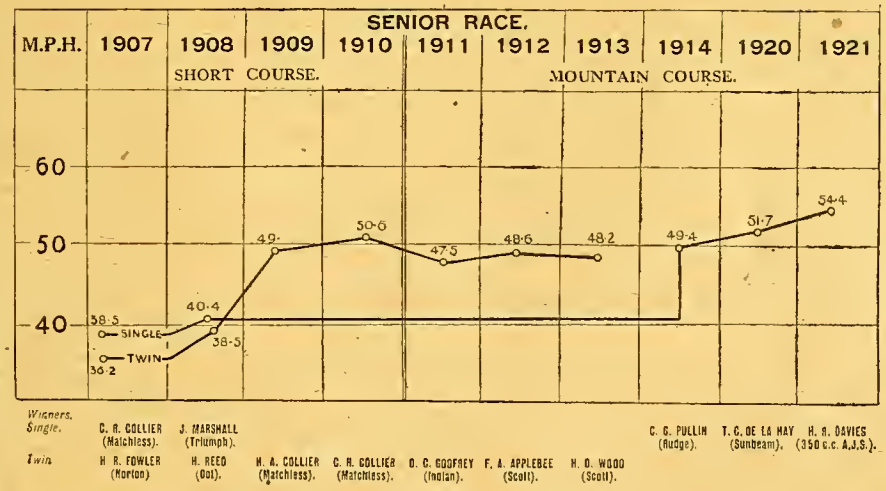
From 1913 onwards the speeds increased little by little, and in 1914 a single-cylinder won its first great victory from the twin, Pullin's Rudge averaging 49.4 m.p.h

### 250 c.c. Races.

A third important milestone marked the races in 1920, the first T.T. events held after the war. This journal again used its influence towards the development of design, and presented the Lightweight Cup for the competitor making the fastest time on a 250 c.c. machine, which was won by R. O. Clark (Levis).

Last year saw the fourth important milestone on the road of the T.T. history, namely, the winning of the Senior event by H. R. Davies's 350 c.c. A.J.S. at an average speed of 54.4 m.p.h.; in this race *The Motor Cycle* Cup was won by D. G. Prentice on a J.A.P.-engined New Imperial. This year (1922) the Lightweight Class formed a separate event in which the premier award was a replica of the original Trophy.

The graphs given on this page show the increase in the speeds of Senior machines.

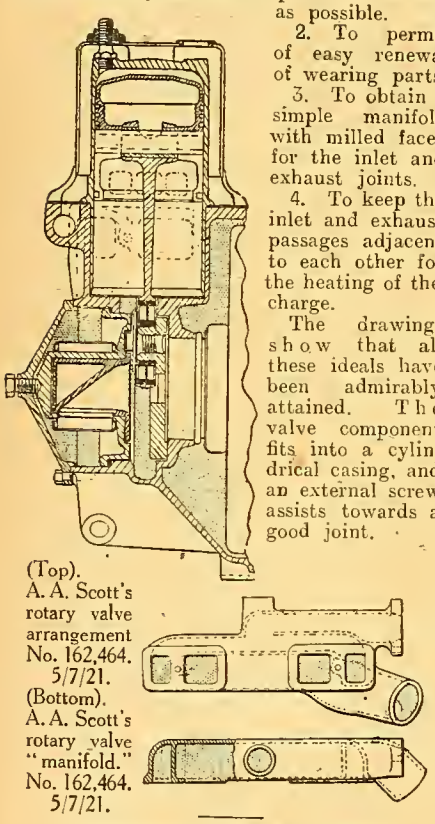


How speeds have increased since the first T.T. race in 1907. The top graph depicts the figures for the fastest laps each year and the bottom one the speeds of the Senior Race winners.

MANY of the patents described in these pages never reach the manufacturing stage; this cannot be said of the next on my list, which describes the rotary valve lay-out of the Scott Sociable engine. Mr. A. A. Scott explains at length in his specification that the design is inspired by four principal aims, viz.:

1. To utilise the weight of the valve and the pressure of the gases so that the vital surfaces may maintain a perfect fit as long as possible.
2. To permit of easy renewal of wearing parts.
3. To obtain a simple manifold with milled faces for the inlet and exhaust joints.
4. To keep the inlet and exhaust passages adjacent to each other for the heating of the charge.

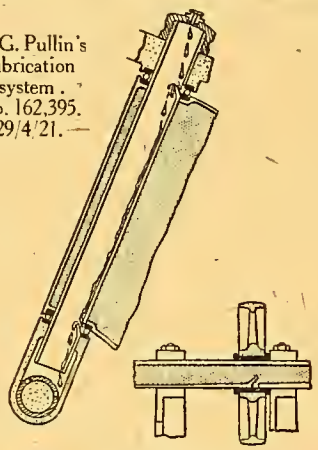
The drawings show that all these ideals have been admirably attained. The valve component fits into a cylindrical casing, and an external screw assists towards a good joint.



(Top). A. A. Scott's rotary valve arrangement No. 162,464. 5/7/21. (Bottom). A. A. Scott's rotary valve "manifold." No. 162,464. 5/7/21.

### Lubricating the Steering Head.

Most motor cycle designers occasionally imitate Nelson and turn a blind eye towards things which they do not wish to see. Mr. C. G. Pullin enjoys a well-earned reputation for conscientiousness, and is one of the very few men who refuse to ignore the unsatisfactory lubrication of the steering head. He improves it without wasting much money. At the top of the steering head he provides a shielded hole for introducing oil. Just above each of the two bearings he punches inwards a tongue cut out of the side of the tube on its rear face; this tongue catches the oil and turns it into the bearing. The base of the tube may be sealed

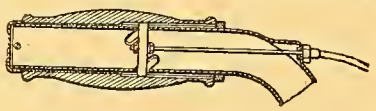


C. G. Pullin's lubrication system. No. 162,395. 29/4/21.

by a diaphragm level with the lower bearing, which diaphragm may take the place of the lower tongue; but if there is a pivoted cross-piece at the base of the head tube the diaphragm will be omitted.

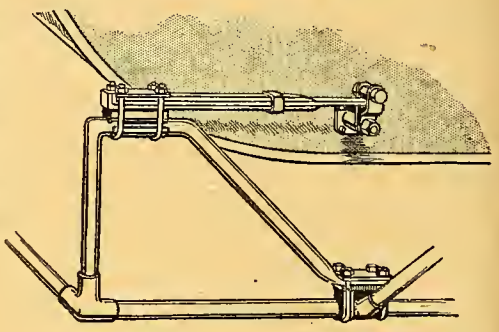
### Twist Grip Control.

A very simple form of twist grip control is protected by Messrs. Pullin and Groom, all of whose notions are worth the cost of patenting. The Bowden wire or light



C. G. Pullin's cable control. No. 163,397. 17/5/21.

control rod is introduced to the interior of the handle-bar at the point where it is bent back towards the grip. Two inclined slots are cut in the bar, and two pins or lugs on the wire, or rod, enter these slots. A sleeve and grip complete the equipment, which, undoubtedly, gives a pleasant form of control.



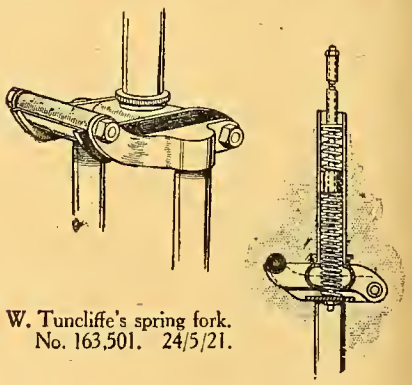
H. P. Martin's sidecar springing. No. 171,562. 24/11/21.

### Sidecar Springing.

Quarter-elliptic springs are of course, all the rage in the car world just now, and the Martinsyde people propose to utilise them for mounting a sidecar body on its chassis. Tubular brackets are provided above both longitudinal tubes of the sidecar chassis, and the thick ends of the quarter-elliptics are bolted to the tops of these brackets. The thin ends of the springs are attached to the chair by means of lugs and links. It appears that the construction should reduce the side roll to which many sidecar bodies are addicted at speed over rough going.

### Front Springing for Lightweights.

I never like opening a spring fork patent, because past experience has taught me the difficulty of sizing up a new fork until one has actually tested it on the road; forks have sold by the thousand



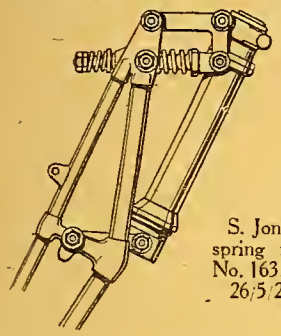
W. Tuncliffe's spring fork. No. 163,501. 24/5/21.

**Recent Patents.—**

which I personally should have turned down after a glance at the drawings. So I will only say of Mr. Tunnicliffe's fork that it is obviously a great deal more sightly than most of the spring forks now fitted to motor cycles. It should be noted that the rubber cushioning device in front of the fork crown only comes into action in the event of excessively violent rebonnds. Obviously, the device is intended for ultra-lightweight motor cycles (or pedal cycles), and, incidentally, it has been already adopted on the McKenzie machine.

### Front Fork Design.

A third spring fork is designed by Mr. Sydney Jones, and may be described in stud book parlance as being "by Druid out of Triumph." It has the most complicated linkage I have ever seen applied

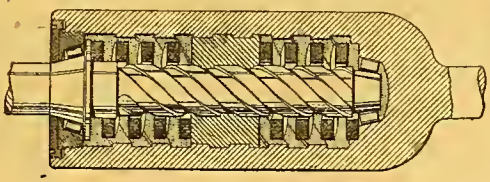


S. Jones' spring fork. No. 163,532. 26/5/21.

to a fork, and I am not in the least prepared to guess what it would feel like over a pothole. If Mr. Jones has made up a sample, I hope he will give me a chance to see how his hybrid rides.

### Worm Drive.

Cost might prove to be the only deterrent against Mr. W. W. Scott's spring worm drive coming into use on motor cycles. As all the world knows, the problem of devising a cheap and efficient shock absorber is partly to blame for the scarcity of shaft drive on motor cycles. The Scott layout is extremely simple, and should be efficient, bnt can hardly be cheap to make. The driving shaft terminates in a hollow pot, with an internal worm drive. The continuation shaft has an external worm cut upon it; the two shafts are connected by a sleeve machined with both internal and external

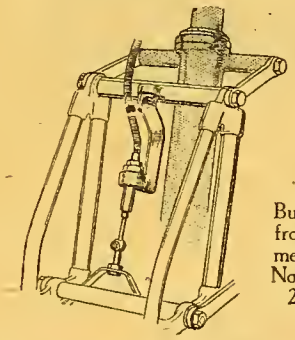


W. W. Scott's spring drive. No. 171,201. 17/11/21.

worm of the requisite "hands." Inside the "pot" are springs bearing against each end of the sleeve.

### Front Brake Adjustment.

Motor cyclists commonly nourish a whole catalogue of "grouses" against the stirrup type of front brake, viz., that the shoes interfere with tyre repairs, that the shoes may drop off, that the adjusters consist of small, delicate parts, and that the cable seldom shows as

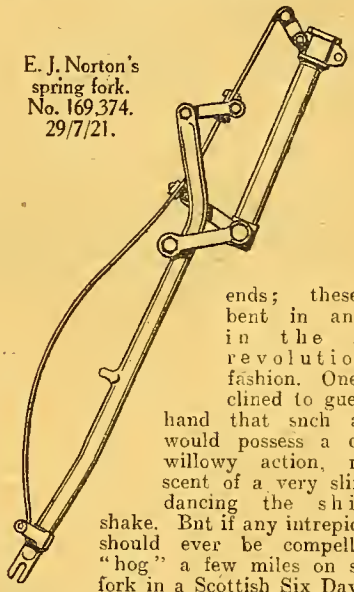


Butterfield's front brake mechanism. No. 170,491. 27/8/21.

long a life as other cables used on the machine. The last of these gronses is tackled by the new Butterfield patent, doubtless intended for application to Levis motor cycles. The spring box and adjusting device are usually mounted in a lug projecting from the top bridge of the spring fork. This method leaves a very short length of exposed cable. The up-and-down movement of the fork naturally imposes the maximum stress on such a short cable, and in many cases the cable actually fouls the head lamp or its bracket. The invention consists of utilising the lug on the top bridge of the fork to carry a bracket projecting downwards for several inches; the spring box and adjuster are mounted at the foot of this bracket, so that a much longer piece of cable is exposed. The fork movement therefore entails less wear and tear on the cable, which is also removed from its old proximity to the lamp.

### Front Fork Springing.

Mr. E. J. Norton has evolved a design embodying two single-leaf springs extending from the steering head to the fork



E. J. Norton's spring fork. No. 169,374. 29/7/21.

ends; these are bent in and out in the most revolutionary fashion. One is inclined to guess offhand that such a fork would possess a curious willowy action, reminiscent of a very slim girl dancing the shimmy shake. Bnt if any intrepid rider should ever be compelled to "hog" a few miles on such a fork in a Scottish Six Days, the probability is that the single-leaf springs would snap about half-way between the fork crown and their upper ends. The resnltant "fetch np" would probably be more abrupt than comfortable.

# A 500-MILE SPEEDWAY.

BRITISH manufacturers usually regard Canada as a doubtful market for the reason that the Dominion is so close to the United States. It will therefore come as a surprise to these makers, and also to a large number of our readers that there are no less than thirty members of a Toronto club who ride Triumphs. The secretary-treasurer of this club—the Brunswick M.C.C.—writes the following interesting notes on clnb life in Canada:—

"We have formed a large club here to be known as the "Brunswick Motor Cycle Clnb," with Mr. W. J. Porter, Toronto agent for the Triumph as president. We have abont thirty Triumph riders and 25 Reading Standard riders as members. The British machines are just coming into their own in Canada now by reason of the wisdom of Mr. Porter in equipping them with 28in. × 3in. tyres and discarding the old-fashioned acetylene lighting and installing electric generator sets. The only criticism I have of the Triumph is its somewhat noisy valve gear.

### International Rivalry.

"Mr. Porter has recently imported an o.h.v.-Triumph, and we are hoping to show up some of the big American machines this year in speed work. 'We have never had a fast English machine to compete, although we put it all over them when it comes to hill-climbs.

"We are rather amused over here at the constant reference to 'Colonial Sections.' Do you know that we have one road from Toronto to New York 550 miles long, concrete highway all the way? We averaged 45 m.p.h. last year in a midnight endurance run, Toronto to Syracnse, 360 miles."

Mr. Stewart advises ns that his club is a live organisation formed to promote the sport of motor cycling in Ontario, and that it is the intention to organise trials, hill-climbs, and economy tests. Correspondence with English clubs is invited.

# IRELAND'S CLASSIC TRIALS

On the famous double hairpin of Glengesh, regarded as the most difficult hill in Ireland.

A scene at Ballyvoy; the finish of the Irish End-to-End Trial. Mr. and Mrs. A. W. Mooney, for many years prominent figures in the big Irish competitions, are the sidecarists.

## History of the Big Events Organised by Irish Clubs. Possibility of Revival of Irish "End-to-End."

THE promise of more settled conditions, anyhow, than have existed during the past couple of years, has resulted in considerable activity amongst the Irish motor cycling clubs, and in view of the likelihood that many English motor cyclists who in the past have enjoyed the experience of taking part in an Irish trial may desire to renew their acquaintance with that country, some brief particulars of the classic reliability trials of the sister isle may not be regarded as out of place at the present moment.

None of the Irish trials has been in existence for as lengthy a period as some of the classic English events, and of the three competitions that may now be regarded as the classic events of the Irish year the End-to-End Trial of the Ulster Centre of the Motor Cycle Union is the oldest.

Although the End-to-End cannot boast of any great antiquity, when compared with some of the English events, its lineal history leads us back almost to the dark age of motor cycling. Its immediate predecessor was the Muratti Cup event, which was run over a course between Belfast and Dublin and back, and the Muratti in its turn sprang out of the inter-team contests between the Ulster and Southern Centres of the Union, which in the early days of the century were held between Belfast and Dublin.

The institution of the End-to-End contest was mainly due to the desire of the Ulster Centre of the Motor Cycle Union to promote an event which would attract English competitors. They hardly felt justified in holding an event that would make as great a claim on the time of the competitors as, say, the Scottish Six Days, and as a compromise a contest from Mizen Head in Cork to Fair Head in Antrim was selected. To the late Mr. Walter Good more than to any other individual the End-to-End is due. He induced the Palmer Company to put up a very valuable trophy for the event, and in addition gave to the organisation of the contest an amount of time that few persons would have been able to devote to such a competition. The End-to-End conditions have varied a good deal from year to year, but the basic idea of the contest has always been maintained. In the last event that was held, that of 1915, the route was divided into two sections, each section occupying approximately a day. Dublin was the resting place on the first night, and the trial ended in Belfast. The Palmer Cup in that year was won by W. H. Freeman, who, it may be added, was also successful in the same year in the Dublin "Twenty-four" and the Cork "Twenty."

It is confidently anticipated in Ireland that this year will see a revival of the event, but so far no definite decision with regard to the matter has been made by the Ulster Centre of the Motor Cycle Union. Reports as to the condition of the roads in the south of Ireland are still unreliable, and until a personal survey of the route has been made by some members of the committee it is likely a definite decision with regard to the matter will be postponed.

### The Dublin "Twenty-Four."

The Twenty-four Hours' Trial of the Dublin and District Club, while not an event of such long standing as the End-to-End Trial is nevertheless one of

**Ireland's Classic Trials.—**

considerable antiquity. The first trial took place in 1911, and, as has been the case with most of the contests since held, the ascent of Glengesh Hill in County Donegal was the crucial test of the trial. Glengesh is generally regarded as the severest hill in Ireland. It is certainly the steepest hill to be found on any main road in the country, and, apart from its gradient, it affords a peculiarly trying test by reason of the fact that there is a steady ascent of several miles before the actual climb of the hill commences. The presentation of a very valuable cup by the Rudge-Whitworth Company gave an added importance to the event, and on the first occasion it was put up for competition it was appropriately enough won by a rider of that make of machine, W. J. Henderson being the fortunate individual.

In 1914 the cup was won by A. W. Mooney, on a Bradbury sidecar, and in the following year there was a tie between T. Toole (3½ Rover) and W. H. Freeman (7 Indian). Both were regarded as joint holders of the cup, and by winning in 1916 Freeman made the trophy his own property. The contest of 1916 was not held over the usual course to Glengesh and back. Owing to the restrictions with regard to lighting then in operation, the route was from Dublin to Carlow and amongst the Wicklow Mountains. In 1920, owing to serious disturbances in the city of Londonderry the Co. Derry portion of the course had to be deleted, and the trial ran through Strabane to Letterkenny. Last year, owing to some of the roads in the County Donegal being impassable, the Donegal section of the route had to be cut out, and in lieu thereof the competitors were taken to the north-eastern portion of the County Antrim, where the Dan Nancy-Iscar section of the End-to-End was substituted. This year's trial will take place on June 23rd and 24th, and as the committee has already decided that the route shall embrace both the Dan Nancy section of the End-to-End and also the ascent of Glengesh it looks as if this year's trial will be quite the most important of the series.

### The Cork "Twenty."

No article dealing with Irish classic trials would be complete that did not include a reference to the Twenty Hours' Open Trial of the Cork and District Motor Cycle Club. Just as the Cork Club is the junior of the three senior organisations in Ireland, so its chief trial is the junior of the classic events, but in importance it is little behind the End-to-End Trial or the Dublin and District "Twenty-four." The event was first held in 1914, when it was run over a distance of 340 miles. Starting from Cork at 1 a.m. the route lay through Waterford, Clonmel, Killarney, Waterville, and Kenmare back to Cork. Ballaghisheen Pass in the Kerry Mountains was the test piece of the trial, being, in fact, the only observed hill on the route. The first contest, for which the Hutchinson rose bowl was offered as an award, was won by that consistent reliability trial winner, A. W. Mooney, on a 6 h.p. Bradbury sidecar, his wife being his passenger, as in many other competitions. An inter-team race run in connection with the event was won by the Cork Club.

In the following year the route was slightly altered, and Gowlane Hill, near Kenmare, was included for the first time. Secret checks were done away with, and a flexibility test was included to decide the placings, and to qualify for a gold medal a certain figure of merit had to be shown in the flexibility test. The competition was won by W. H. Freeman, of Dublin, on a 7 h.p. Indian, E. B. Russell (4 Triumph) and R. S. Russell (2¾ Douglas) being second and third respectively.

Owing to the war it was not found possible to continue the competition after 1915. It was revived in 1919, but the scarcity of new machines had a great effect on the entries. The route and conditions were practically the same as in 1915, except that the flexibility test was dropped, and those gaining full marks were offered gold medals or prizes of equal value. With most of the competitors mounted on crocks of pre-war or early war vintage, it was not surprising to find that only three riders completed the course without loss of marks, namely, J. Browne (2¾ Douglas), E. B. Russell (4 Triumph), and R. S. Russell (2¾ Sunbeam).

The conditions prevailing in the south of Ireland in 1920 made night riding impossible, and the fixture was consequently altered to a one-day trial. The western portion of the route of previous years was utilised, but Gowlane Hill was taken in the opposite direction. Although the route was shortened to approximately two hundred miles, it was considerably stiffened by the fifteen miles of "Colonial" going over Sheehy Mountain and the inclusion of a rough and twisty hill near Ovens. The placings were decided by an acceleration test from a standing start, the figures of merit being worked out by a formula which took into consideration the time, c.c., and weight. The first place was secured by a popular member of the promoting club, J. Healy, on a 4 h.p. Norton, A. D. Carton (3½ Sunbeam) being second, and R. A. Pericho (6 Martinsyde sc.) being third.

Last year the conditions in the south of Ireland made it impossible to hold the trial, but this year it is hoped to revive it. The Motor Cycle Union has already approved of the date fixed for the event, Whit-Monday, but the course and conditions have yet to be settled, and will largely depend on the condition of the roads in the South. The officers and committee of the club have already purchased a handsome and valuable silver cup to be won outright as the principal award, and in addition the usual valuable prizes will be offered. Riders from the English Midlands will have a unique opportunity of taking part in this year's event, as it is held after the Tourist Trophy Races. The direct Cork-Liverpool steamer leaves Liverpool on the Saturday and arrives in Cork on Whit-Monday, and there is a return boat leaving Cork on the following Tuesday. As the greater portion of the route of the trial lies in the western part of the County Cork and the County Kerry, the Cork "Twenty" offers a unique opportunity to visiting competitors who desire to see a little of the best of Irish scenery. There is a consensus of opinion that West Cork and the Kingdom of Kerry include within their bounds the best in the way of scenery that Ireland has to offer.

T.W.M.

# CURRENT CHAT.

## Special Features.

THE JUNIOR T.T. DESCRIBED.
EVOLUTION OF THE MOTOR CYCLE.
SIDECARS OF LONG AGO.
IRELAND'S CLASSIC TRIALS.

Many are the uses of the sidecar. In this case it is being employed to transport a load of happiness to the sea beach—and good fun too—judging from the expressions.

## Times to Light Lamps.

| | | | |
|---|---|---|---|
| June 1st | .. | .. | 10.5 p.m. |
| „ 3rd | .. | .. | 10.7 „ |
| „ 5th | .. | .. | 10.9 „ |
| „ 7th | .. | .. | 10.11 „ |

Number plates to be illuminated thirty minutes earlier, *vide* Road Vehicles Registration and Licensing Order (1921).

### No. 1,001.

With this issue we start our second thousand. What will motor cycles be like when we celebrate our 2,000th number?

### Tuesday's Races.

On page 731 of this issue will be found a description of Tuesday's Lightweight and Junior T.T. Races.

### An Unplaced Record Breaker.

Although not fast enough to beat his handicap at the Royal Brooklands meeting, C. F. Temple (998 Harley-Davidson) was sufficiently speedy to break the 5 mile record in the 1,000 c.c. solo class; his time was 3m. 5.04s. (97.28 m.p.h.)

### Of Interest to Antiquarians.

As part of the Selborne Society's travel scheme a motor tour is being planned for July 3rd to 15th, visiting Banbury, Leamington, Warwick, Shrewsbury, Ludlow, Hereford, Forest of Dean, Wye Valley, Gloucester, Cheltenham, Bath, Marlborough and Newbury. The guide is Mr. Charles H. Ashdown, F.R.G.S., a well-known antiquarian, who from personal knowledge we know to be well-qualified for the task. Details are in the hands of the Travel Secretary, 27, Vanbrugh Hill, London, S.E.5.

### 2nd Army D.R.s Re-union.

Provided there is a sufficient response to this appeal, a reunion of 2nd Army D.R.s will be held on June 9th, taking the form of a dinner and smoking concert in Liverpool. Inquiries should be addressed to Mr. F. A. Fox, Alexander Hall, Islington Square, Liverpool.

### Suggestion for Whit Monday.

Unattached motor cyclists desiring an interesting afternoon's entertainment on Whit Monday should certainly not forget the North London Rally at Hendon. A big attendance of motor cycle clubs is assured, but there are, in addition, many competitions open to all for trophies and prizes totalling £50. The grounds will be opened at noon, the affair starting officially two hours later.

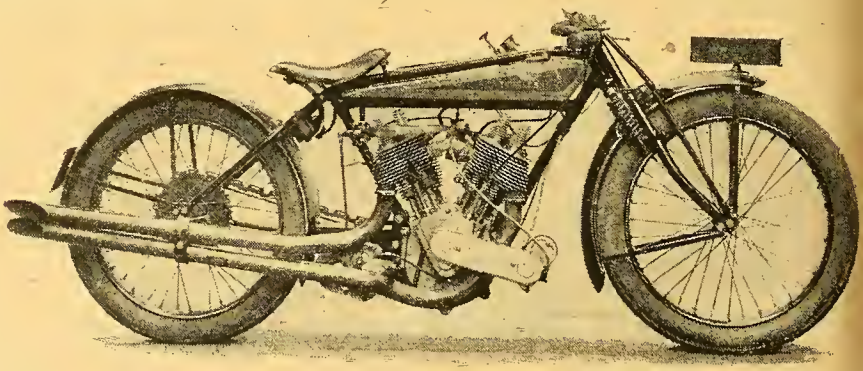
### Yorkshire's Open "Colonial" Trial.

Nothing if not thorough, the Yorkshire Centre A.C.U. is embodying quite a number of helpful and novel features in the regulations for its "Colonial" trial to be held on the 17th. Machines will compete only against other machines of the same class, and prices and weights will be included in the published results. Something exceptionally stiff in routes is to be expected—the course will be a secret one—but freak hills like Park Rash or Summer Lodge will not be included, and six variously mounted motor cyclist members of the competitions committee have already satisfied themselves that there is nothing "impossible" about the trial. Further particulars may be obtained from Mr. W. A. Dovener, 26, Beamsley Road, Frizinghall, Bradford.

### WHERE TO SEE THE LONDON-EDINBURGH.

ON page 735 there is a complete list of entries for the London-Edinburgh run, which starts to-morrow evening from Hendon. Readers, who wish to observe the competitors at any point, should consult the following timetable and guide:

Hendon.—7 p.m. Start.
Hatfield.—7.45 p.m.
Biggleswade.—9.0 p.m. Check.
Grantham.—12.20 a.m. Control and check. Breakfast.
Doncaster.—3.54 a.m. Check.
Ilkley.—6.30 a.m. Control and check. Second breakfast.
Settle.—8.44 a.m. Here competitors cross the river Ribble, proceed through Giggleswick, and over Buckabrow Hill.
Ambleside.—10.52 a.m. Check; beginning of non-stop section.
Summit Kirkstone Pass.—11.4 a.m.
Patterdale.—11.26 a.m. End of non-stop section.
Carlisle.—1 p.m. Check. Lunch.
Moffat.—4.4 p.m. Check and control. Tea.
Edinburgh.—7.10 p.m.



Designed by E. Poppe of the firm of White & Poppe, the big twin depicted above is intended solely for high speed solo work. The engine is the new 976 c.c. J.A.P. unit, which is giving excellent service in similar machines. A close ratio gear box is used in conjunction with a Brampton spring circle chain.

## Old Olavians' M.C.C.

A club is being formed for the Old Boys f St. Olave's School, Tower Bridge, London, S.E. 'ull particulars may be obtained from Mr. E. W. 'urner, 339, Clapham Road, S.W.9.

## Dartford and District M.C.

Under the above name a club has recently been ormed to foster motoring amongst motor cyclists nd car owners. A nominal subscription has been xed. Full particulars as to objects, programmes, tc., can be obtained by application to Mr. J. W. aylor, 46, Spital Street, Dartford.

## Preston (Brighton) M.C.C.

Another highly successful event was held on he 14th inst. This was a reliability trial over he South Downs. Results are now available as ollows:—

1. N. Cook (394 A.J.S.).
2. J. Packham (348 Douglas).
3. R. Firth-Kettle (398 A.B.C.).

## Wallington and District M.C. and L.C.C.

Thirty members attended the social run to the ull's Head Hotel, Ewhurst. Prizes for the best-ept machines were awarded to K. E. Bradfield (5 enith), J. C. Sanford (5 Rover sc.) and L. W. G. Vard (10 Morgan). After tea acceleration and low-running tests were held, resulting as ollows:—

ACCELERATION TEST.—1, Clifford Bowen 3 A.B.C.).

SLOW-RUNNING TEST.—Solos: 1, A. B. Lavy (3½ Sunbeam); Sidecars: 1, A. Leeding Sunbeam sc.).

## Isle of Wight M.C. and L.C.C.

The hill-climbing contests carried out on the 8th ult. were a distinct success, and in spite of a trong head wind some excellent times were made. Fastest time of the day—49.3 m.p.h.—was achieved by J. G. Hann, with a 980 c.c. New Imperial. Results:—

300 c.c. SOLO.—1, E. T. Witham (269 Sparkbrook); 2, H. W. Parnell (245 Levis).

350 c.c. SOLO.—1, C. F. Stagg (349 A.J.S.); 2, L. Copper (349 Douglas).

500 c.c. SOLO.—1, C. F. Stagg (349 A.J.S.); 2, Dr. E. F. W. Buckell (404 A.B.C.).

750 c.c. SOLO.—1, E. G. H. Morris (490 Norton); 2, E. J. Newcombe (678 N.U.T.).

UNLIMITED SOLO.—1, J. G. Hann (980 New Imperial); 2, E. G. H. Morris (490 Norton).

750 c.c. SIDECARS.—1, G. R. Scotney (734 Royal Enfield); 2, J. H. D. Allen (557 B.S.A.).

UNLIMITED SIDECARS.—1, G. R. Scotney (734 Royal Enfield); 2, A. L. Donovan (980 Royal Enfield).

LIGHT CARS.—1, W. Heber (998 Heber); 2, Dr. E. S. Craig (Morgan).

## Barrow and District M.C.

One hundred and two entries were received for the recent hill climb, results of which are appended:—

275 c.c. SOLO MACHINES.—1, B. Turner (Velocette), 33⅛s.; 2, B. Parkinson (Diamond), 36⅗s.; 3, W. B. Dall (Omega), 38⅖s.

350 c.c. SOLO MACHINES.—1, B. Parkinson (Diamond), 28s.; 2, G. Roberts (Sheffield Henderson), 29s.; 3, J. C. Dearden (Massey Arran), 29⅘s.

500 c.c. SOLO MACHINES.—1, H. Jackson (Sunbeam), 25⅘s.; 2, A. Hawkins (Norton), 26⅛s.; 3, B. Hill (Scott), 27⅖s.

750 c.c. SOLO MACHINES.—1, H. Jackson (Sunbeam), 26s.; 2, A. Hawkins (Norton), 27⅕s.; 3, C. Whiteside (Scott), 27⅖s.

UNLIMITED SOLO MACHINES.—1, H. Jackson (Sunbeam), 25⅖s.; 2, P. Baron (Indian), 26⅘s.; 3, A. Hawkins (Norton), 27⅕s.

600 c.c. SIDECAR MACHINES.—1, H. Jackson (Sunbeam), 30½s.; 2, G. Roberts (Norton), 34⅓s.; 3, R. Dixon (Douglas), 37s.

UNLIMITED SIDECARS.—1, H. T. Wilson (Norton), 37⅓s.; 2, R. Dixon (Douglas), 38⅗s.; 3, B. Fisher (Norton), 44⅘s.

FASTEST TIME OF THE DAY.—Harold Jackson (Sunbeam), 25⅛s.

## West Birmingham M.C.C.

Results of the recent half-day reliability trial were as follows:—

RILEY CUP.—P. B. Cranmore (3¾ Scott). Awarded the second time in succession, and automatically becoming his own.

UNDER 350 c.c. CLASS.—F. Terry (2¼ Velocette).

UNDER 500 c.c. CLASS.—W. C. Shelton (3½ Sunbeam).

UNLIMITED CLASS.—Miss L. Ball (3¾ Scott).

SIDECAR CLASS.—A. C. Cope (6 Rex sc.).

## Sheffield and Hallamshire M.C. & L.C.C.

On May 14th the club held a highly successful social run to Grindon, in the beautiful Manifold Valley. Members amused themselves by making ascents of Grindon Hill during the afternoon. This was one of the hills included in the 1914 Six Days' Trials, and is notable for its rough surface and three acute hairpin bends. The dry weather, however, robbed it of most of its terrors, one sidecar machine making the ascent with six on board.

## Week-End Club Events.

*June 3rd.—Bristol M.C.C.—Run to Bournemouth.*
*June 3rd.—Gloucester M.C. and L.C.C.—Run to Zoological Gardens, Bristol.*
*June 3rd.—Dumfries M.C. and C.C.—Run to view London-Edinburgh Competitors at Moffat.*
*June 3rd.—Birmingham M.C.C.—Lycett Trophy Trial to Land's End.*
*June 3rd.—Oxford M.C. and Oxford University M.C.C.—Speed Trials.*
*June 3rd.—Atherton and District M.C.C.—Run to Pickmere.*
*June 3rd.—Prestwich and District M.C.C.—Speed judging competition.*
*June 3rd.—Exeter M.C. and J.C.C.—Inter-club Trial.*
*June 3rd.—West Kent M.C.—"Lucky-bag" Trial.*
*June 3rd.—Coventry Triangle M.C.—Run to Hunningham.*
*June 3rd.—Kelso and District M.C.C.—Run to London-Edinburgh Trial.*
*June 3rd and 4th.—Sheffield M.C.C.—Run to Stratford-on-Avon.*
*June 4th.—Atherton and District M.C.C.—Run to Buxton.*
*June 4th.—Colne and District M.C.—Run to Pateley Bridge.*
*June 4th.—Coventry Triangle M.C.—Run to Fish Hill and Broadway.*
*June 4th.—Leeds Motor Union.—Week-end run to District.*
*June 4th.—Manchester M.C.—Run.*
*June 4th.—Southampton M.C.C.—Run to Highcliffe.*
*June 5th.—Carmarthen and District M.C.C.—Welsh Speed Championships.*
*June 5th.—Cork and District M.C.C.—One day Trial.*
*June 5th.—Ilkley and District M.C.C.—Social Event.*
*June 5th.—Eastbourne and District M.C.C.—Inter-club Hill Climb.*
*June 5th.—Bulwell M.C.—Run to Bakewell and Buxton.*
*June 5th.—Gloucester M.C. and L.C.C.—Reliability Trial to Bournemouth.*
*June 5th.—Exeter M.C. and J.C.C.—Run to Slapton Sands.*
*June 5th.—North Lodnon M.C.C.—Inter-club rally at Hendon.*
*June 6th.—Bulwell M.C.—Run to Bottesford and Belvoir.*
*June 7th.—York and District M.C.—Gymkhana.*
*June 7th.—Leeds Motor Union.—Run from City Square.*
*June 8th.—Bridgnorth and District M.C.C.—Hill Climb.*
*June 8th.—Gloucester M.C. and L.C.C.—Hill Climb at Chatcombe.*

## Warrington M.C.

On July 15th-16th this club is holding a trial to Holyhead and back, open to all clubs in the Cheshire Centre A.C.U.

## Kidderminster M.C.C.

A recent petrol consumption trial attracted a large number of entries and provided the following interesting figures:—

| | m.p.g. |
|---|---|
| 1. J. Bush (2¼ Velocette) ... ... | 185 |
| 2. W. Elliot (4 Triumph) ... ... | 152 |
| 3. F. J. Adam (3½ Norton) ... ... | 150 |

## Cumberland M.C.C.

Results of the recent reliability trial of the Western Section in the Lake District were:—

HEAVY SOLO CLASS.—Gold medal: A. Marley, Cockermouth (Triumph), lost half a mark. Silver medal: K. Hodgson, Keswick (Triumph), lost one mark. Bronze medal: L. Harrison, Carlisle (Sunbeam), lost five marks.

LIGHTWEIGHT CLASS.—Gold medal: Leslie Edmondson, Keswick (Massey-Arran), lost no marks. Silver medal: John G. R. Edmondson, Keswick (Velocette), lost five marks. Silver medal: W. Tiffen, Carlisle (Velocette), lost five marks.

The silver cup presented by the organiser, Mr. J. Wilkinson, Workington, for best performance on any machine up to 500 c.c., was won by L. Edmondson on a 2¾ h.p. Massey-Arran.

## Tiverton M.C. and L.C.C.

Holne Hill, Chevithorne, was selected for the club's first hill-climb. There were 29 entries, and competitors were divided into six classes. The length of climb was just under half a mile. T. Williams (499 Triumph) made the fastest time (33s.). L. Stagg (Sunbeam) won the Committee's Cup for the best performance. Other results:—

FORMULA.—1, L. Stagg (Sunbeam), 35s.; 2, T. Williams (Triumph), 33s.; 3, W. Pincott (A.B.C.), 40⅕s.

SIDECARS UNDER 500 c.c.—1, D. Physick (Norton), 48⅖s.; 2, E. Wood (Norton), 49s.

SIDECARS, UNLIMITED.—1, D. Physick (Norton), 48¼s.; 2, E. Wood (Norton), 47⅕s.; 3, F. H. Tidball (Indian Scout), 54s.

SOLO, UNDER 350 c.c.—1, J. Eddy (A.J.S.), 45s.; 2, R. Mawson (Rex-Acme), 1m. 4s.; 3, N. Parminter (Sparkbrook), 1m. 11⅘s.

SOLO, UNDER 500 c.c.—1, L. Stagg (Sunbeam), 35s.; 2, T. Williams (Triumph), 35s.; 3, W. Pincott (A.B.C.), 40⅕s.

SOLO, UNLIMITED.—1, L. Stagg (Sunbeam), 34s.; 2, W. Pincott (A.B.C.), 40⅕s.; 3, T. Williams (Triumph), 33s.

## North London M.C.C.

Results of the Staley Cup Trial, held on May 13th, are now to hand:—

*Staley Cup and Gold Medal.*—R. L. Richardson (3½ Alecto).

*Gold Medal.*—S. M. Greening (2¾ Francis-Barnett).

*Silver Medals.*—C. E. Morris (3 A.B.C.), R. H. Baxter (2¼ Radco), F. G. Mattock (7 A.J.S.), R. W. Greaves (8 Brough Superior sc.), W. A. Schooley (3½ Zenith-Bradshaw), R. H. May (4¼ B.S.A.), J. W. Auckland (8 Brough Superior sc.).

*Bronze Medals.*—L. P. Walter (4 Triumph), A. J. Beaurain (3½ Sunbeam), F. J. Youngs (2¾ O.K.), F. E. Jones (8 Matchless sc.), A. M. Powell (5-6 M.T.), C. D. Malby (10 Morgan), H. V. Bateman (10 Henderson sc.), H. R. Harveyson (4 Indian Scout sc.).

The annual climb, held on May 20th, resulted as follows:—

SOLO UNDER 350 c.c.—G. Richards (2¼ Velocette), *bronze medal*, 56s.

SOLO UNDER 600 c.c.—*Silver medal*, E. C. Gordon (3½ Triumph), 43⅗s.; *bronze medal*, G. H. Ruscoe (3½ Norton), 45s.

UNLIMITED SOLOS.—*Silver medal*, R. McAndrews (2¾ Douglas), 41s.; *bronze medal*, E. C. Gordon (3½ Triumph).

SIDECARS UNDER 600 c.c.—*Bronze medal*, E. C. Gordon (3½ Triumph), 60⅗s.

UNLIMITED SIDECARS.—*Bronze medal*, R. W. Greaves (8 Brough Superior), 45⅗s.

FASTEST TIME OF THE DAY.—R. M. McAndrews (2¾ Douglas), 41s.

## Warrington M.C.

At the club's first run of the season, between thirty and forty motor cycles made the journey. The prizes for the best average turnouts were awarded to: 1, Kinsey (1914 Indian); 2, Guest (1915 Lea-Francis); 3, A. Collins (7 A.J.S. sc.).

## Norfolk M.C. and L.C.C.

Great enthusiasm prevailed at the club's most recent climb on Ringland Hill, held on the 18th ult. Fastest time of the day was made by A. G. Fenn on a 499 c.c. o.h.v. Triumph rebuilt for speed work; but S. M. Greening (Francis-Barnett) also made a surprisingly good show.

## Lee, Lewisham, and District M.C. and L.C.C.

Particular disappointment is felt by this newly-formed club owing to the accident to one of its members when proceeding to the recent South-Eastern Counties Team Trial. This unfortunate incident apparently upset the luck of the club, but it hopes to do better next time.

## Darlington and District M.C.

On May 20th a merry crowd assembled for "Snakes and Ladders"; this proved a great success, the winners being H. R. Porter, first; E. C. Tomkins and J. H. Simpson tied for second. The Booby prize went to a Scott T.T. rider, J. W. Hett, with minus 102 marks! The club is grateful to *The Motor Cycle* contributor who suggested the game.

## Dolgelly and District M.C.C.

Some thirty motorists and motor cyclists have been enrolled by this club, which has recently been formed with headquarters at the Royal Ship Hotel, Dolgelley, Merionethshire. It is proposed to have a run with a novelty competition on Whit-Monday, June 5th. The Rev. M. R. Smith, Llanelltyd Vicarage, Dolgelley, and Mr. W. O. Chambers, N. P. Bank, Dolgelly, are acting as joint hon. secretaries.

## Newcastle and District M.C.

Arrangements have now been made for the seventeenth annual all-night run from Newcastle to Edinburgh and back, which takes place on June 17th-18th, and is generally one of the most successful ventures of the season. It not only attracts a great deal of interest from Northern motorists, but also from the public, for last year thousands turned out to see the start from the Grand Hotel, Barras Bridge, Newcastle.

## East Lothian M.C.C.

A very successful outing in the form of a hill-climb on Meg's Bank, near Gifford, was held on the 13th ult. The weather was at its best, and some good sport was witnessed. The following is the prize list:

STANDING START.

| | | Actual time. | Handi-cap. | Result. |
|---|---|---|---|---|
| 1. | J. McRorie (4½ Humber) | 24⅖s. | +2 | 26⅖s. |
| 2 | W. Romanel (3 A.B.C.) | 27⅕s. | +2 | 29⅕s. |
| 3. | J. Rattray (2¾ A.J.S.) ... | 35⅕s. | −5 | 30⅕s. |

FLYING START.

| | | | | |
|---|---|---|---|---|
| 1 | W. Romanel (3 A.B.C.) | 19s. | +2 | 21s. |
| 2. | J. Rattray (2¾ A.J.S.) | 27s. | −5 | 22s. |
| 3. | J. C. Patullo (4 Triumph) | 25⅖s. | scr. | 25⅖s. |

FASTEST TIME OF DAY.—W. Romanel (3 A.B.C.), 19s.

After the hill-climb, a game of "Snakes and Ladders" was played, which was a source of great enjoyment to all members. Tea at Gifford completed a splendid afternoon's outing.

## Redditch and District M.C.C.

Results of the reliability trial described in *The Motor Cycle* last week have now been issued as follows:

TERRY CHALLENGE CUP AND GOLD MEDAL (best performance on any machine).—C. Brown (3½ Triumph).

PRESIDENT'S CHALLENGE CUP and GOLD MEDAL (best performance by Redditch member).—C. Brown (3½ Triumph).

GOLD CENTRE MEDALS (100% marks).—F. W. Viles (2¾ Raleigh), W. H. Hadfield (2¾ Raleigh), T. Featherstone (2¾ A.J.S.), W. E. Smith (3½ Norton), C. Brown (3½ Triumph), W. Brown (4 Triumph), J. S. Bacon (3½ Sunbeam), H. Stretton-Ward (3½ Triumph), G. Kimberley (3½ James), J. Doshor (8 Enfield), T. Ward (2¾ Sirrah), W. Probert (2¾ Verus), F. Sibley (3½ Rudge), S. Wright (4 Humber), B. L. Bird (4¼ B.S.A.), J. Cave (8 G.N.), J. W. Meredith (8 T.B.), and W. Ridley (10 New Hudson).

SILVER MEDALS (90% marks).—J. A. Newman (4 Douglas), J. W. Moxon (2¾ Monopole), R. Cooper (2½ Alldays Allon), R. Ransom (3½ Lea-Francis), P. Johnson (3½ Rudge), E. Slader (2¾ Beardmore), J. H. Walker (4¼ B.S.A.), L. Green (2¾ Verus), T. Weaver (2¼ Sirrah), H. Uzzell (8 New Imperial), H. Collins (3½ Norton), H. Perrey (4¼ B.S.A.), F. Spouse (8 T.B.), E. Sidwell (8 Bayliss-Thomas), and F. Mann (8 Morgan).

## Liverpool M.C.

Held on the 21st ult., the amateur trial for the Blake Cup resulted in three riders of solo machines tieing for first place; Miss Cottle (Triumph), G. F. Burns (Sunbeam), and J. H. Fox (Norton).

In the sidecar class first place fell to T. H. Roberts, who put up an excellent performance on a Dunelt.

## Sheffield and Hallamshire M.C. and L.C.C.

The annual trial for the Stacey Trophy was held over a 60 miles course in Derbyshire. Over 200 people watched the competitors ascend Litton Slip Road, which had to be climbed three times. Only one failure was recorded here, although the bad bend at the bottom was treated with respect by all the competitors. A still larger crowd assembled at the finish at Monsal Head. Official results:—

1. Stacey Trophy and Replica: C. W. Hayward (3½ Sunbeam).

2. Gold Medal: G. H. Gregory (8 Sunbeam and sidecar).

3. Silver Medals: W. Kantlahner (4 Wilker), C. W. Ward (3½ o.h.v. Triumph), A. Blake (3½ Martinsyde).

Lightweight Prize (not exceeding 292 c.c.): L. Haywood (2¼ Levis).

## Central Cornwall M.C.C.

Speed trials on Davidstowe Moors, near Camelford, opened the competition season of the club. Beautiful weather prevailed, and the course was an admirable one. Each competitor was timed over a half-mile stretch electrically, this apparatus being designed and made by Mr. B. Gordon Williams, of St. Austell, one of the joint hon. secretaries of the club. It worked splendidly. Some fine times were recorded, the fastest being that of C. R. Endicott (Plymouth) on a Sunbeam, who covered the course in 23⅕s., well over 70 miles an hour. Results:—

SOLO EVENTS (not exceeding 350 c.c.).—1, P. Phillips, St. Austell (New Imperial), 29⅗s.; 2, O. G. Whitlock, Holsworthy (2¾ A.J.S.), 30s.

Not exceeding 300 c.c.—1, E. G. Browne, Plymouth (2¼ New Imperial), 27⅕s.; 2, P. Phillips, St. Austell (2¼ New Imperial), 30s.

Special class for Douglas machines.—1, W. Hosking, St. Austell, 34⅗s.; 2, E. D. Lean, Truro, 36⅖s.

Special Triumph class.—1, Symons, Charlestown, 28⅕s.; 2, Grant, Devonport, 29⅗s.

Not exceeding 650 c.c.—1, C. R. Endicott, Plymouth (3½ Sunbeam), 23⅕s.; 2, P. Phillips, St. Austell (3½ Norton), 24⅕s. At the first trial these two riders tied with 24s. each.

SIDECARS (not exceeding 650 c.c.).—1, J. Illingworth, Devonport (3½ Norton sc.), 29⅕s.; 2, H. F. Benny, Bodmin (3½ Sunbeam sc.), 32⅖s.

Unlimited.—1, J. Illingworth, Devonport (3½ Norton sc.), 31s.; 2, H. F. Benny, Bodmin (3½ Sunbeam sc.), 32⅕s.

## Mid-Bucks M.C.C.

There were 28 starters out of an entry of 28 when, on May 11th, the club held its first trophy run over a 50-mile course starting and finishing at Aylesbury Market Square.

It was very successful, despite complications introduced by a stray cow, just at the foot of the steep rise past Chequers, the residence of the Prime Minister. It will be seen that the winner only dropped four points out of a possible 100 throughout the route. The Mayor of Aylesbury (Ald. J. Robinson) acted as starter. Results:—

1. G. Janes (Triumph) ... ... 96
2. D. H. Musgrave (Humber) ... 94
3. G. F. Parrott (Triumph) ... 90

## Croydon and District M.C.C.

The first members' hill climb was held at Buggs Hill, near Caterham.

The proceedings passed off without a hitch of any description. Fastest time of the day was made by T. Hornby, a private owner riding a Harley-Davidson, who carried off both the Private Owner and Trade cups.

The results on formula were:—

350 c.c. SOLO (PRIVATE OWNER).—1, W. N. Peet (2¾ A.J.S.), silver medal; 2, M. Jones (2¾ Douglas), bronze medal; 3, W. Simmons (2¾ Douglas).

350 c.c. SOLO (GENERAL).—1, A. J. Winstanley (2¾ Blackburne), silver medal; 2, M. Jones (2¾ Douglas); 3, A. F. Pulling (2¼ Enfield).

500 c.c. SOLO (PRIVATE OWNER).—1, M. Jones (2¾ Douglas), silver medal; 2, A. C. Scarff (3½ Rover); 3, L. Goddard (3 Enfield).

500 c.c. SOLO (GENERAL).—1, W. J. Henney (2¾ Blackburne), silver medal; 2, R. L. Briggs (3 A.B.C.); 3, M. Jones (2¾ Douglas).

LADIES' SOLO.—1, Miss F. Davis (2¼ Enfield), silver medal; 2, Miss S. Sedgwick (2¼ Enfield); 3, Miss E. Tidy (2½ James).

UNLIMITED c.c. SOLO (PRIVATE OWNER).—1, D. F. Brown (3½ Sunbeam), silver medal; 2, M. Jones (2¾ Douglas), bronze medal; 3, T. Hornby (7-9 Harley-Davidson).

UNLIMITED c.c. SOLO (GENERAL).—1, A. J. Winstanley (2¾ Blackburne), silver medal; 2, R. L. Briggs (3 A.B.C.), bronze medal; 3, T. Hornby (7-9 Harley-Davidson).

500 c.c. SIDECAR (GENERAL).—1, H. S. Jerome (3 A.B.C. sc.), silver medal; 2, W. J. Henney (3½ Sunbeam sc.); 3, A. C. Scarff (3½ Rover sc.).

UNLIMITED c.c. SIDECAR (PRIVATE OWNER).—1, H. S. Jerome (3 A.B.C. sc.), silver medal; 2, W. Bucknell (8 Matchless sc.), bronze medal; 3, L. J. Bucknell (8 Enfield sc.).

UNLIMITED c.c. SIDECAR (GENERAL).—1, H. S. Jerome (3 A.B.C. sc.), silver medal; 2, W. Bucknell (8 Matchless sc.), bronze medal; 3, A. Attwood (4 Hawker sc.).

WHAT MIGHT BE.—If the test hills in the reliability trials were always as accessible to a populous district as Blackford Hill, Edinburgh, scenes such as the above would no doubt be much more common than at present.

# WHO WILL WIN?

## Possibilities in To-day's Senior T.T. Race discussed by "Michael Kirk." Danger from America?

PHEW! What a question! Ring for some iced water, and wet those towels again, please, Mary. Now for it! Let's clear the table a little to start with. I think that if there is one cast-iron certainty about the race it is that no 350 c.c. machine will come near winning. Last year that magnificent rider, H. R. Davies, literally forced his small A.J.S. into first place, but he was aided by a number of "green" engines and certain misjudgments on the part of faster men. This year the little 'uns are up against a galaxy of the best riders on earth, mounted above engines matured by two or three years of concentrated and continuous experiment.

Unless I am a fool, a 500 c.c. winner is assured. If you agree, let us sort out the top-notchers. Douglas? Looks rather as if this firm were concentrating on the Junior Race—no Pullin, no Emerson—a dark horse in Anstice, who is a newcomer to the Island, and that unlucky sportsman, Alfie Alexander, who has not finished the course in his last six essays.

Indians? The same buses as last year with F. W. Dixon, Duggie Alexander, D. H. Davidson, and another up. Well, I don't know what you think. Some people say Dixon takes too many risks. To my mind, his riding isn't half so dangerous as it looks. I don't think anybody can get round the Manx course faster than he can without taking a good many more chances than he takes. I would tip him to win outright if I knew what his machine could do, and, of course, he won't tell me that.

### Unluckiest of All.

I pass over a number of small entries, and come to the unluckiest Manx visitors of all—Nortons. Our premier speed singles for years, they have nothing but a second place to their credit since Rem Fowler's win on the now forgotten Norton twin fifteen years ago. Their turn is long overdue. They will stage the largest team in the race—fourteen men—if all goes well. Duggie Brown and Hassall are supposed to be their fastest pair, with Shaw little behind, and Cawthorne is regarded as their most promising novice. Everybody would enjoy a Norton win, and Hassall would be my selection to effect one.

The Rudge has come back at last. Neither the names of its riders nor its long abstinence from first-class speed work inspire any special terror. But where the T.T. is concerned, you can never judge Rudges by the book. They have a quiet way of suddenly producing a speed with which nobody credits them, and equally of turning out half a dozen unknown riders, all of whom can ride like blue ruin. On paper I would not give a sooted plug for their chances this year. They have eight riders, of whom only that genial giant Watson-Bourne boasts any Manx record worth mentioning. But I have not forgotten 1913 and 1914. Until the times for the first lap go up to-day, others besides myself will be half-expecting another nonchalant miracle from the Rudge factory.

Scotts? I have heard one who ought to know remark that the Scott frame is worth ten seconds per lap in the Island; and he was promptly contradicted by another expert with a curt "You mean twenty?" I know the Scott crowd were profoundly disappointed that they did not win in 1921, and during the interval they have coaxed a good deal more speed out of the Squirrel engine. In Clarence Wood they have at least one rider who is in the absolutely first flight; and a top-notcher on the 1922 Scott needs nothing but a clean run to win outright in dazzling time. The trouble with the Scotts is that they are either in front or nowhere.

### Another Terrifying Team.

Sunbeams will parade yet another terrifying team. It is a toss-up whether George Dance is or is not a finer T.T. man than Dixon. Certainly the finest all-round rider we have, his luck in the T.T. has always been out; in 1920, a broken valve; in 1921, a toss up Glen Helen when a friend's shout distracted him. After the race George remarked grimly to me that he should never take his eyes off the road again, even if the last trump sounded during the race. Personally, my secret dream is that F. W. Dixon, C. P. Wood, and George Dance should all be blessed with a non-stop; given that, let me watch the last lap, and then die. But Dance is by no means the only Sunbeam hope. T. C. de la Hay has won one Senior outright.

Finally, we come to the Triumph entry. Edmond put up a record lap in 1921, and this is the only public ground on which he can be ranked as the equal of some of the men whose chances have been analysed above. Personally, I regard Edmond's ride last year as magnificent. He struck any quantity of trouble, and yet put up two simply terrific laps—it is so hard to keep a cool head when you are anxious. I think Edmond may just about win if his machine can carry him, but I should have more hopes of him if I definitely knew that his engine was faster up the mountain than one or two of his rivals'. Brandish rode like a champion last year on a machine which wanted nursing, and was never fast enough to finish very high. Genial Harveyson we all know as a crack speedman whose luck has never been quite in.

Well, I suppose readers will expect a definite conclusion from me, though my secret convictions are sicklied o'er with pallid doubts, and I am as reluctant to make a definite statement as the author of "Philosophic Doubt" or a diplomatic archbishop. But if you will have it, I wouldn't put a copper on the race at any price—it is far too open. If somebody who was just going to the South Pole lent me a fiver to invest, I would invest it between F. W. Dixon and the Sunbeam's first string. But there wouldn't be any rash optimism about the bet, you know.

# THROUGH FEMININE GOGGLES

One of the most consistently successful lady competitors—Mrs. Hardee, who now uses a Matchless outfit, and proves that she can drive as well as any of the stronger sex.

## How to Attain Success in Motor Cycle Competitions.

TO-DAY, when practically all forms of sport are indulged in by women, it is surprising that more of them do not take up the sporting side of motor cycling. It is healthy, thrilling, intellectual, and is a sport that can be indulged in at all seasons. Considering the joy a motor cycle can give, it is not unduly expensive.

The essence of all sport is achievement, and, like all other sports, to achieve success one must enter wholeheartedly into it. Neither must one be disheartened by failure. The ability to meet failures happily is the true test of a sportsman.

In the majority of districts there are not sufficient lady riders to justify clubs arranging special events for them, and it is therefore necessary for ladies wishing to ride to enter into competition with men.

These remarks are addressed to my sisters of the wheel, and to them I say:

Our contributor, Mrs. M. C. Jennison, who has distinguished herself in speed trials.

## Useful Hints by a Well-known Lady Competition Rider.

Do not make the mistake of expecting special concessions because you are a woman. You have no right to them, and remember that the average club man looks upon you as an interloper at first. He is a gentleman and will treat you with courtesy, but try to remember that if you make an "exhibition" of yourself he is sure to think something about "a pack of women" spoiling the club events.

If you decide to go in for sporting work, learn to *ride* a motor cycle first, and afterwards enter in the smaller club events.

I had taken down and re-erected a motor cycle engine complete before I was permitted to have a ride on one. I had been riding twelve months before entering my first competition, and had been riding in competitions two years before winning a medal. I was fortunate to have for a mentor a very bad-tempered engineer (I hope he will not

**Through Feminine Goggles.—**

read this), who never hesitated to give me the masculine view of the proceedings.

### Small Beginnings.

To start with, at all events, ride a low-powered machine. Unless you are of exceptionally fine physique you will find a high-powered machine beyond your capabilities, and nowadays a 250 c.c. machine is ample for everything except sidecar work, and can be tuned to attain speeds at which you will have all your work cut out to hold it.

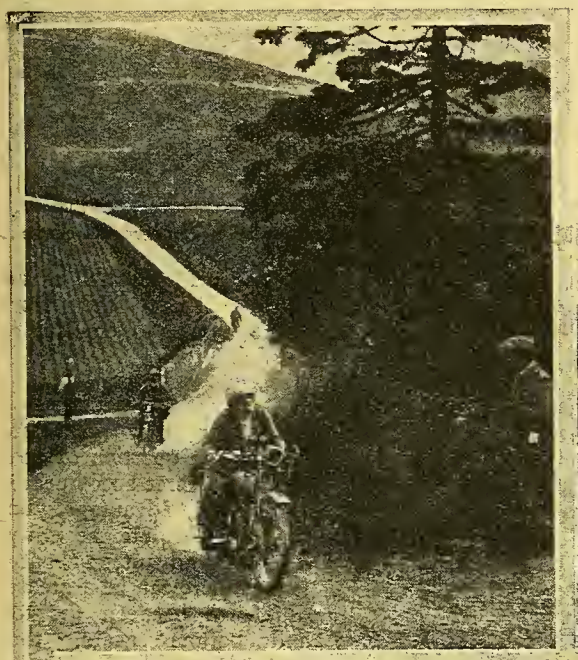
There is a large choice of machines available up to 350 c.c., and you may choose a machine with either a two-stroke or four-stroke engine. The two-stroke engine has the merit of simplicity, but it is a rather more difficult machine to tune for hill-climbs, etc. (By this I mean that experimental tuning on the two-stroke is more expensive. There are, however, one or two very fine examples of sporting two-strokes on the market which do not need any experimental tuning.)

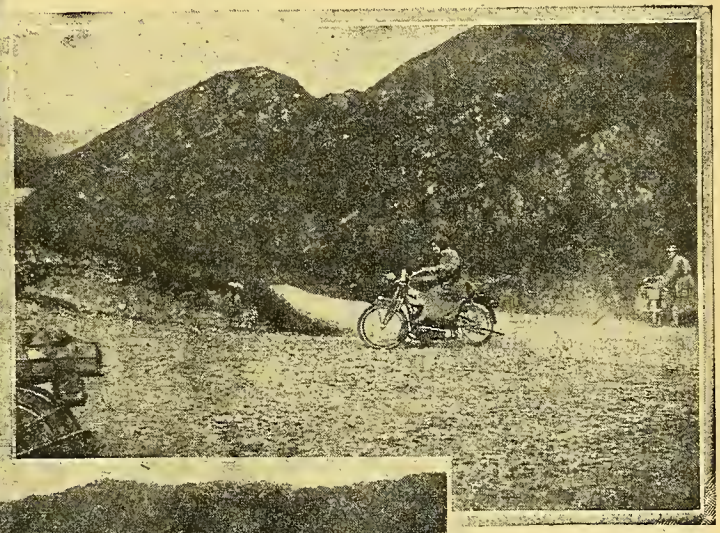
Among the four-stroke machines I strongly advise beginners to start with a single-cylinder engine. They are easier to tune than multi-cylinder engines. It is preferable to choose a machine fitted with a two-speed gear and clutch for sporting work; it ensures a quick get-away at hill-climbs and speed trials, and the clutch is an invaluable adjunct in reliability trials.

It is the general practice amongst sporting riders to use a two-lever carburetter, but the writer uses, and strongly advises the use of, a single-lever automatic carburetter.

### Misfiring.

At open speed trials it is the rule rather than the exception for machines to misfire for the first half-dozen yards, and there is really no necessity for this. It is generally due to the use of high petrol levels,





Top, left: One of the several lady competitors in the 1914 Scottish Six Days Trials, Miss M. Beck (Bat-Jap) on Cockbridge. Top, right: Mrs. R. Lord (Rex), who as Miss Muriel Hine, was probably the first lady to take up motor cycle competition work seriously. Bottom: Another lady in the 1914 Scottish event, Miss Hammett (Douglas) on Applecross.

Mrs. Baxter, another lady Scottish Trials competitor of pre-war days.

large jets, and other misconceptions regarding carburation. A *good* single-lever carburetter can be tuned to fire over the first compression and give the maximum of acceleration without misfiring, and, this can be done a week before the event if necessary. There is no time to twiddle levers to correct carburation during the 26 or 27 seconds occupied in covering the half-mile. Five yards of misfiring at the beginning of the half mile means 2/5s. on the time, and this will probably lose you the first place.

If your machine is fitted with a decent magneto, don't interfere with it, and don't make the mistake of timing it too fast. Of far more importance than the magneto is the sparking plug used. Consult the maker of your machine as to the best type of plug to use, and *use* it, but discard it immediately it starts to misfire. Do not use fancy plugs for sports work—there are plugs on the market for which claims are made that are ridiculous. Do not waste any time with "gadgets," such as spark-gaps, dopes, and other patent appliances. These are no doubt very excellent, but they are out of place for competition work.

Whilst on the subject of speed, do not talk glibly of 50 m.p.h. Buy a Bonniksen, and put the hand twelve successive times to 40 on the dial, choosing a straight, clear road for the purpose. Then get off and think about it, remembering that you have been at speed for one minute, and during this time you have covered two-thirds of a mile.

Miss Wilson (Velocette) as she appeared at Staxton Brow hill climb. (Inset.) Miss Marjorie Cottle (Triumph), a lady who excels in freak trials.

### Tuning for Reliability Trials.

Tuning for reliability trials requires rather different methods, as, although the machine may be required to show a good turn of speed (such as for an acceleration test), yet more attention must be paid to minute details in order to get good "all-round" results. In modern trials it is very essential that both brakes should be in good order. On many machines sold at the present time, the front brake is not so efficient as it should be.

Miss Phillips (Connaught), a competitor in Northern hill climbs.

### Three-Speeds.

Another very important item is the question of gear ratios. A three-speed gear is a decided advantage, but not an absolute necessity. The chief advantage about it is that there can be a greater difference between the top and bottom gears, thus enabling one to use a very low bottom gear on the "Colonial sections" without having to sacrifice a good deal of speed on the top gear. If the machine is chain-driven, the chains should be cleaned and afterwards adjusted. Do not forget the following details:

Oil the hubs, adjust and lubricate the steering head and spring forks, clean out the insides of the mudguards, drain the tank, and cleanse the carburetter and petrol pipe.

If there are likely to be water-splashes, cover the high-tension terminal with stiff grease. If you are riding a belt-driven machine, pay special attention to your belt. It is very essential to practise riding if you are to succeed in reliability trials. Take your machine out on rainy days and practise riding in muddy by-lanes. Also find a hairpin bend on a steep by-road, and ride round this repeatedly until you can do it with confidence and without removing your feet from the rests.

**Through Feminine Goggles.—**

Try to cultivate the habit of keeping your feet on the footrests instead of steadying yourself by foot-slogging. Undue foot-slogging is not only very untidy, but actually tends to cause skidding.

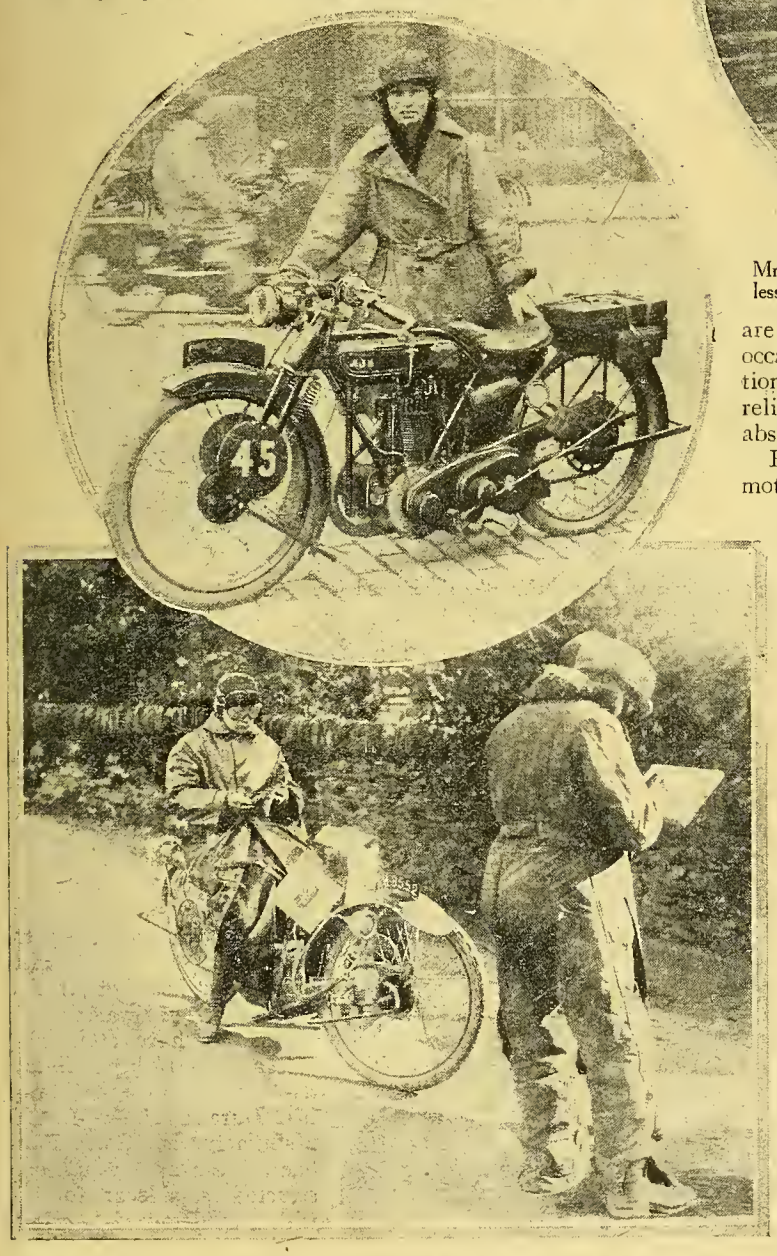
### Clothing.

I should add a few words about clothing. There is certainly no necessity to wear anything more than a divided skirt for ordinary touring and pleasure runs; but this is quite unsuitable for sporting work, and is a big handicap. Well-cut riding breeches and a woollen jumper are *comme il faut*, if only because they are the most appropriate garments for sporting occasions. The same garments, with the addition of a waterproof coat, are also the best for reliability trials, where freedom of movement is absolutely necessary.

Finally, if you are to succeed as a sporting motor cyclist, you must put in many hours of hard work, and not be discouraged by failures. You must understand your own machine, and the final adjustments should never be left to anyone else.

The effort is well worth while, for after your first win you will know indeed the joy of living. MARY C. JENNISON.

Mrs. Bell's many successes on her A.J.S. outfit are none the less meritorious because they were accomplished in Scotland.



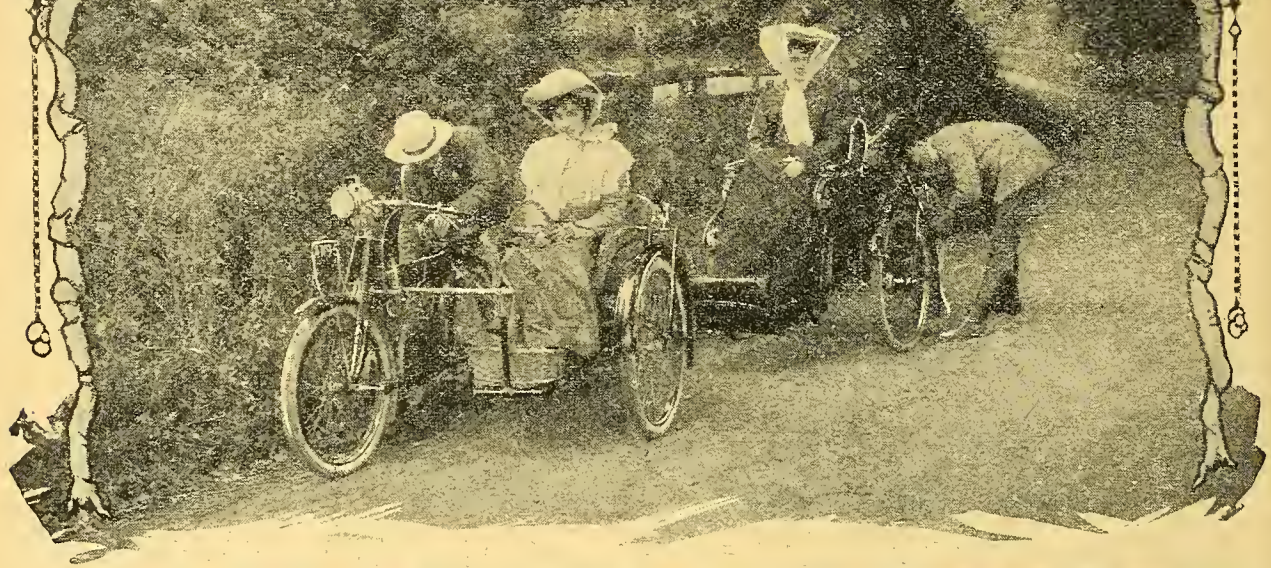
Top. Mrs. Olive Knowles (A.J.S.), the only lady gold medallist in this year's Scottish Trials. Below: Mrs. Jansen (Ner-a-Car), whose name appears most often of any lady motorist on the programmes of the big trials nowadays; she earned undying fame for her pluck in last month's six day event in Scotland.

## CLASSIC SOUTH AFRICAN EVENT.

IN the race from Durban to Ladysmith and back, organised by the Natal M.C., a brilliant win was made by H. P. Loader (7-9 Harley-Davidson), who gained the Rudge Trophy, a cash prize of £50, a gold medal and a certificate, also the Harley-Davidson Trophy for the fastest time for a machine over 600 c.c. The second man, R. Blackburn, riding a similar machine, but with a sidecar attached, won the Indian shield, a cash prize of £25, a gold medal and a certificate, while the third man, J. Booth, mounted on a Triumph Junior, gained a cash prize of £10, a gold medal and a certificate.

An annual event of considerable importance in South Africa, the Durban—Ladysmith contest is generally noted for its extremely strenuous nature, the road surfaces in particular being more suitable for inclusion in a sporting trial than a race.

# Side Cars of Long Ago

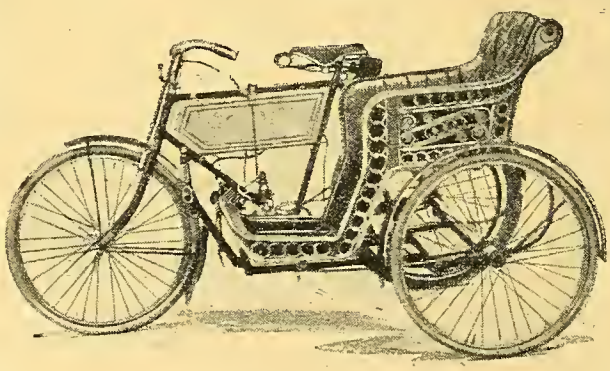


On the road in 1904. For many years the two types of three wheelers shown—the sidecar and forecar—fought for supremacy, the latter in the end being completely discarded.

## Questions Regarding the First Sidecar. Was it Attached to a Pedal Cycle or Motor Cycle? Breaking Down Prejudice.

*"Ah, now side by side* together *we glide*
*O'er mountain, by valley, through sweet countryside;*
*Together in truth—not he away there*
*And she, all forgotten, dust smothered in rear."*

ALTHOUGH not exactly a slogan, these four lines of doggerel answered very well in 1903 as a battle cry—or trade cry, to be more accurate. They were published together with an illustration of the first sidecar ever advertised in *The Motor Cycle*. That was early in 1903, and the enterprising firm was Components, Ltd., Birmingham, the makers of the present-day Ariel. This company was astute enough to recognise that the sidecar would eventually oust the trailer and "quad," and advertised their production as the "Liberty" Sociable attachment, an appellation emphasising its companionableness more than the bare word sidecar would have done.



The first sidecar ever advertised in "The Motor Cycle"—the "Liberty" Sociable, marketed by Components, Ltd., in 1903.

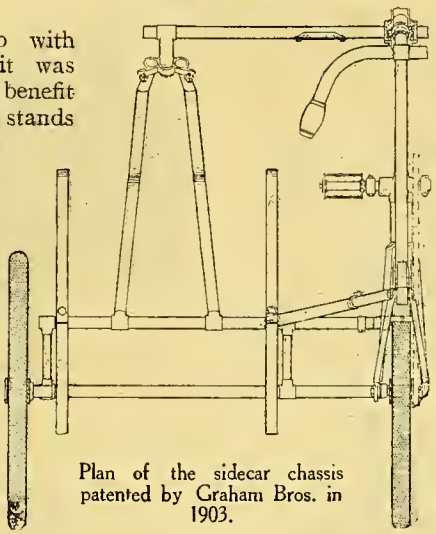
The actual patentee, however, of this device was Mr. W. J. Graham, of Messrs. Graham Bros., Enfield, who protected the design in January, 1903, and sold it to Components, Ltd. This sidecar was first shown on the Stock Exchange walk to Brighton attached to a 3½ h.p. Minerva. An interesting point in connection with the patent was that the idea came to Mr. Graham in the midst of a sleepless night, and was immediately jotted down on paper. This negatives the probability of Mr. Graham having ever heard of Mr. Dan P. Morgan, of Swansea, who claims to have attached a sidecar to a 1½ h.p. Minerva as long ago as 1901, or of Mr. Durant, of the L.A.D. Manufacturing Co., Farnham, Surrey, who constructed a sidecar for use with a tandem pedal cycle as far back as 1888.

Credit must go to the man who first thought of the idea, but greater credit to the men who conceived the same idea

**Sidecars of Long Ago.—**

independently, and backed it up with business zeal and enterprise, for it was owing to their perspicacity that we benefit as we do to-day. Among these men stands Mr. W. Montgomery, who used a sidecar in 1902 and founded a sidecar business in those early days, strong in the belief that it was a sound proposition.

When the old drawings and photographs are examined it cannot be said either that the sidecar has altered fundamentally since it was first evolved. Of course, in comfort the modern body is quite a different thing, but the chassis design remains much the same as in 1903. Not until Alfred Scott departed from the beaten track with deliberate and clever independence did anyone show much originality in the design of a triangulated chassis. The fetish of detachability has, of course, kept designers to an orthodox chassis design, but now that owners seldom detach their sidecars there is no excuse for adherence to old plans and methods, which make for inaccessibility. The most glaring instance of this is the fitting of the chain case on the near side of a machine *designed solely for sidecar work*.



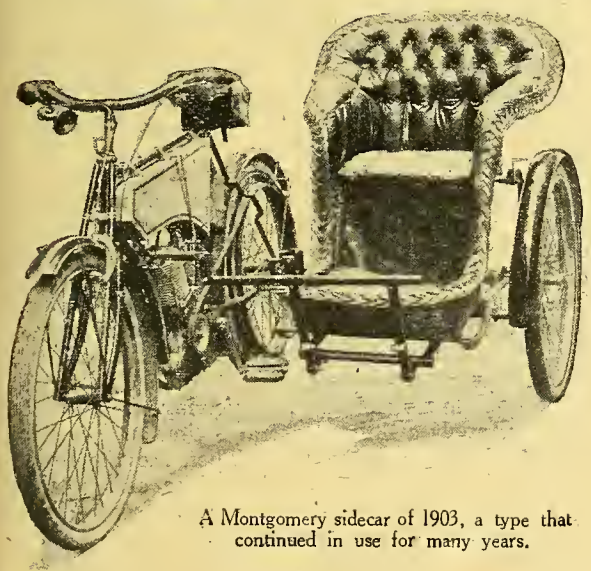
Plan of the sidecar chassis patented by Graham Bros. in 1903.

Attached to a 1903 3½ h.p. Minerva, this Graham sidecar attracted attention at the first Stock Exchange Walk to Brighton.

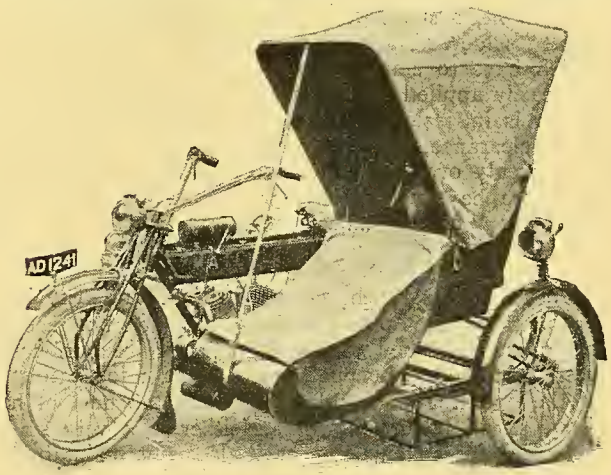
A 1904 model, in which the passenger is exposed almost as much as the driver of the machine, as was the case with all the old sidecars.

In spite of its undoubted advantages the sidecar was slow in gaining favour. The tricar and the "quad" were usurped with no crashing of cymbals, and several years went by before the prejudice against the sidecar's unsymmetrical appearance was overcome. In July, 1905, *The Motor Cycle* gave the sidecar an "extended trial in order to determine for its own satisfaction the most suitable form of attachment," and emphasised in its favour the matters of storage and freedom from side-slip compared with the trailer, and also the lower h.p. required to propel a sidecar compared with the power needed for a tricar. In conclusion the writer said, "Altogether, it has answered all our expectations."

There is a certain amount of restraint in that favourable summing-up which probably reflects the general



A Montgomery sidecar of 1903, a type that continued in use for many years.



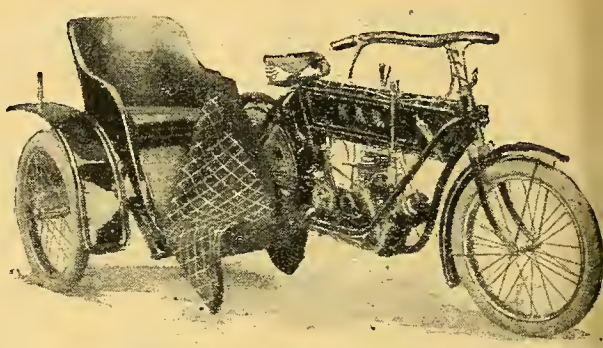
A "wind scoop" on a 1909 Matchless. Messrs. Collier & Sons were alive to the comforts of the passenger thirteen years ago, as will be gathered from the illustration showing an extremely "roomy" hood.

**Sidecars of Long Ago.—**

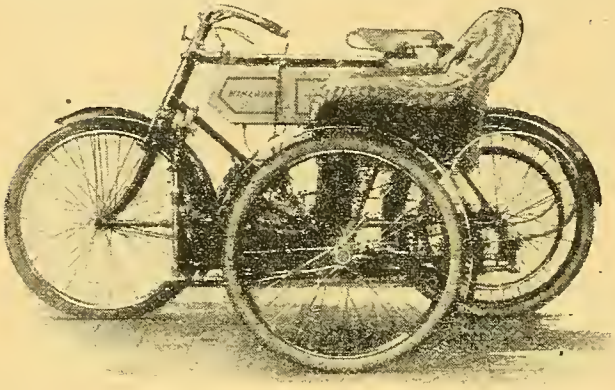
feeling existent at that date, although we believe the writer was far more convinced of its ultimate popularity than many fellow motor cyclists were.

### Why the Sidecar Scored.

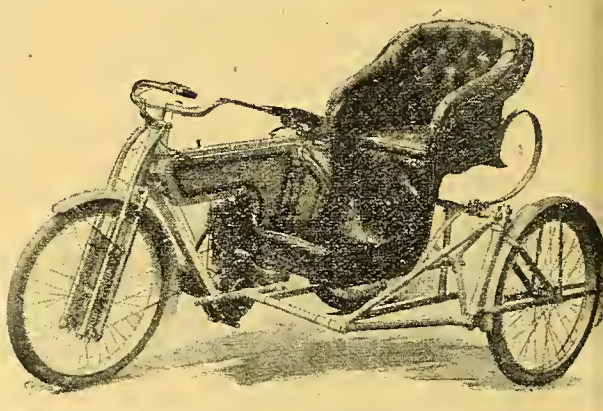
From that time—July, 1905, onwards—sidecars entered the big trials, competing with the forecars, more than holding their own in spite of their "unmechanical" design. Compared with the three-wheeler, too, the sidecar outfit in those days was infinitely cheaper, and possibly it was that advantage, together with the talking point of "quick detachability," that gave it supremacy in the end. It is certainly in a very strong position now.



Probably the first coachbuilt sidecar. It follows in design the wicker type popular at that time—1905.



An experimental model with the sidecar wheel almost midway between the two cycle wheels.



The first model of the castor wheel type, which became at a later date comparatively popular.

MILLFORD SIDECARS OF 1903 AND 1905.

# SOLDERING FOR AMATEURS.

A SLIGHT knowledge of soldering is extremely useful to the motor cyclist, as it enables him to fit new Bowden wire nipples, coned pipe unions, and the like for himself. The only requisites are a copper bit, a small pot of liquid flux, and a stick of "soft" solder. Hard solders are only needed for jobs which have to stand a good deal of heat, which is not easily applied in the amateur's garage; and a soft solder is intrinsically preferable for a long joint with little clearance, as it is more easily persuaded to coat evenly over the entire face. Soft solder should therefore be specified, as the ironmonger will often hand out "hard," unless the buyer is careful.

### Not enough Flux.

Pocket outfits, such as the Britinol and Fluxite, are used by many motor cyclists; but I do not recommend the combined solder-cum-flux for inexperienced users, as there is not enough flux to see the job through if the operator makes blunders about the heat of his iron, as all beginners will. Neither is a very small bit ideal for an amateur, as it does not maintain its heat for long, and may have to be heated at some distance from the work.

To learn the correct heat for the iron is the beginner's invariable trouble. At first he gets his bit too hot, and the solder is either destroyed or liquefie and runs right off the work. Then he does not ge his iron hot enough, and the solder refuses to ru obediently. Finally, he strikes the happy mean, an the solder does what he wants. The old hand alway does two things to his bit before he uses it. On takin it from the fire, he holds it near his cheek to judg the temperature; then he rubs the tip on a piece o old brick to remove any dirt which might foul th solder.

### Repairs to Nipples.

In handling Bowden wires, be careful to solder th strands together before cutting the damaged end off otherwise they will unravel, and prove awkward t thread through the nipple, besides being weakened The old nipple can be used again, as the solder i it will melt under the combined influence of heat an flux. To fit a nipple, thread the soldered end of th wire through the nipple so that it projects, say, ⅛in grip nipple in a vice, tap the projecting wire ends dow radially, apply a little solder at a time until the join is full of solder to the top. Then file the head o the nipple off neatly. If the solder ceases to ru apply more flux—want of flux is a more probabl cause of trouble than cooling of the bit.

ROAD RIDER.

# GUIDE TO TO-DAY'S SENIOR T.T. RACE.

TIME OF START: 10 a.m.
DISTANCE: Six circuits of 37½ miles. Total Distance, 226 miles 4 furlongs.
PRIZES: 1st, The Senior Tourist Trophy to be held for one year, £30 in cash, a large silver medal, and special gold medal; 2nd, £20; 3rd, £10.
TEAM PRIZE: A small replica of the Trophy to be awarded to a nominated team, members of which must all finish the course within 30 minutes of the winner.
CLUB PRIZES: Small replicas of the Trophy will be awarded on points to the teams, nominated by an affiliated club, of three motor cycles driven by members of the nominating club which, in the Lightweight, Junior and Senior Races respectively, give the best performances.

Few thirty-seven mile circuits could be selected in any part of the British Isles which would give greater variety in riding conditions. Acute and dangerous corners are negotiated at Quarter Bridge, Ballacraine, Sulby Bridge, Ramsey, Keppel Gate, and Governor's Bridge. The first 10 miles are undulating, but the next ten are almost level, slightly falling grades predominating. Ramsey Hairpin precedes a three mile climb which averages 1 in 11, and a slight upward grade follows for a further four miles at an average altitude of 1,500 feet above sea level.

# The Blue Riband of the Motor Cycle World.

## Details of To-day's Great Race. Lap Times and Winners of Previous Competitions for the Senior Tourist Trophy.

TO-DAY the classic event of the motor cycle world will be decided. At 10.0 a.m. the first competitor in the Senior Tourist Trophy race will be despatched on his 226 miles race against time. The course is chosen to find out the most desirable features needed in the motor cycle for the man who would ride in ease and comfort without fear of mechanical trouble, for the racing machine of to-day is the father of the touring mount of to-morrow.

### Previous Winners.

1921. H. R. Davies, single-cylinder A.J.S. (74×81 mm.=348 c.c.), 54.49 m.p.h.
1920. T. C. de la Hay, single-cylinder Sunbeam (85×88 mm.=499 c.c.), 51.79 m.p.h.
1914. C. G. Pullin, single-cylinder Rudge (85×88 mm.=499 c.c.), 49.4 m.p.h.
1913. H. O. Wood, 2-cylinder, 2-stroke Scott (69.8×63.5 mm.=486 c.c.), 48.2 m.p.h.
1912. F. A. Applebee, 2-cylinder, 2-stroke Scott (69.8×63.5 mm.=486 c.c.), 48.6 m.p.h.
1911. O. C. Godfrey, 2-cylinder Indian (70×76 mm.=584 c.c.), 47.5 m.p.h.
1910. C. R. Collier, 2-cylinder Matchless (85.5×58 mm.=666 c.c.), 50.6 m.p.h.
1909. H. A. Collier, 2-cylinder Matchless (85×65 mm.=738 c.c.), 49.0 m.p.h.
1908. Singles: J. Marshall, Triumph (84×86 mm =476 c.c.), 40.4 m.p.h. Twins: H. Reed, Dot (75×75 mm.=662 c.c.), 38.5 m.p.h.
1907. Singles: C. R. Collier, Matchless (85×76 mm.=431 c.c.), 38.5 m.p.h. Twins: H. R. Fowler, Norton (75×75 mm.=662 c.c.), 36.2 m.p.h.

### Limits of Motor Cycles in Previous Senior T.T. Races.

1907. Singles and twins raced separately. Singles were limited to one gallon of fuel per 90 miles; twins, one gallon for 75 miles.
1908. Singles and twins raced separately. Fuel limits: Singles, one gallon per 100 miles; twins, one gallon per 80 miles.
1909. Fuel limits abaodoced. One class only. Capacity limits: 500 c.c. singles, 750 c.c. twins.
1910. One class only. Capacity limits: 500 c.c. singles, 670 c.c. twins.
1911. Capacity limits: 500 c.c. singles, 585 c.c. twins.
1912 to 1922. Capacity limit, 500 c.c. for all types.

### The Types that have Won.

1907.—Separate classes for singles and twins.
1908.—Separate classes for singles and twins.
1909.—1st, V twin; 2nd, V twin; 3rd, single.
1910.—1st, V twin; 2nd, V twin; 4th, single.
1911.—1st, V twin; 2nd, V twin; 3rd, V twin.
1912.—1st, twin 2-stroke; 2nd, single; 3rd, V twin.
1913.—1st, twin 2-stroke; 2nd, single; 3rd, V twin.
1914.—1st, single; 2nd, single and twin tied; 3rd, V twin.
1920.—1st, single; 2nd, single; 3rd, single.
1921.—1st, single; 2nd, single; 3rd, single.

### Some Details of the 1921 Race.

The winner's lap times:
1st, 41m. 17s. 2nd, 41m. 53s. 3rd, 42m. 55s.
4th, 41m. 9s. 5th, 42m. 2s. 6th, 41m. 6s.
Total: 4h. 9m. 23s. Average speed: 54.49 m.p.h.
Fastest lap of any competitor: F. G. Edmond (Triumph), 40m. 8s.=56.44 m.p.h. (record).

### TEAMS.

1. A.J.S.: H. R. Davies (No. 1), G. Kelly (No. 48), O. Wade (No. 52).
2. BEARDMORE PRECISION (riders not selected at time of going to press): (No. 13), (No. 37), (No. 40).
3. INDIAN: D. S. Alexander (No. 22), F. W. Dixon (No. 24), D. H. Davidson (No. 42).
4. NORTON: D. M. Brown (No. 3), J. W. Shaw (No. 39); (3rd man not selected at time of going to press).
5. RUDGE (not yet selected).
6. SCOTT: C. P. Wood (No. 5), Ivor Thomas (No. 49), H. Langman (No. 66).
7. SUNBEAM: T. C. de la Hay (No. 2), A. Bennett (No. 44), G. Dance (No. 61).
8. TRIUMPH: W. Brandish (No. 4), F. B. Halford (No. 47), F. G. Edmond (No. 64).

## TABULATED LIST OF 67 ENTRIES FOR TO-DAY'S SENIOR T.T. RACE.

**56 Four-Stroke Singles. 5 Two-Stroke Twins. 1 Four-Stroke V Twins. 5 Four-Stroke Flat Twins.**

| No. | Entrant. | Make and H.P. | No. of Cyls. | Bore mm. | Stroke mm. | Cubic Capacit c.c. | Driver. |
|---|---|---|---|---|---|---|---|
| 1 | A. J. Stevens & Co. (1914) Ltd. | 2¾ A.J.S. | 1 | 74 | ×81 | 348 | H. R. Davies |
| 2 | John Marston, Ltd. | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | T. C. de la Hay |
| 3 | Norton Motors, Ltd. | 3½ Norton | 1 | 79 | ×100 | 490 | D. M. Brown |
| 4 | The Triumph Cycle Co., Ltd. | 3½ Triumph | 1 | 85 | ×88 | 499 | W. W. Brandish |
| 5 | The Scott Motor Cycle Co., Ltd. | 3½ Scott Squirrel | 2 | 70 | ×63·5 | 486 | C. P. Wood |
| 6 | Alexander & Co. | 3½ Douglas | 2 | 68 | ×68 | 499 | A. H. Alexander |
| 7 | G. H. Tucker & Co. | 3½ Norton | 1 | 79 | ×100 | 490 | G. H. Tucker |
| 8 | Rudge-Whitworth, Ltd. | 3½ Rudge | 1 | 85 | ×88 | 499 | O. M. Baldwin |
| 9 | Rudge-Whitworth, Ltd. | 3½ Rudge | 1 | 85 | ×88 | 499 | A. E. Taylor |
| 10 | Norton Motors, Ltd. | 3½ Norton | 1 | 79 | ×100 | 490 | H. W. Hassall |
| 11 | John Marston, Ltd. | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | C. Greenwood |
| 12 | John Marston, Ltd. | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | W. R Brown |
| 13 | F. E. Baker, Ltd. | 3½ Beardmore Precision. | 1 | 81·1 | ×96 | 495 | — |
| 14 | Ilkley M.C. and L.C.C. | 3½ Scott Squirrel | 2 | 70 | ×63·5 | 486 | G. Clapham |
| 15 | Victor Horsman, Ltd. | 3½ Norton | 1 | 79 | ×100 | 490 | V. Horsman |
| 16 | W. Hollowell | 3½ Norton | 1 | 79 | ×100 | 490 | Entrant |
| 17 | G. E. Cowley, Junr. | 3½ Norton | 1 | 79 | ×100 | 490 | Entrant |
| 18 | Alexander & Co. | 3½ Norton | 1 | 79 | ×100 | 490 | G. M. Black |
| 19 | C. Waterhouse | 3½ Sunbeam | 1 | 85 | ×88 | 499 | Entrant |
| 20 | The Triumph Cycle Co., Ltd. | 3½ Triumph | 1 | 85 | ×88 | 499 | H. R. Harveyson |
| 21 | Rudge-Whitworth, Ltd. | 3½ Rudge | 1 | 85 | ×88 | 499 | J. A. Watson-Bourne |
| 22 | W. H. Wells | 3½ Indian | 1 | 79·3 | ×100·8 | 498·82 | D. S. Alexander |
| 23 | T. Sinister | 3½ Norton | 1 | 79 | ×100 | 490 | Entrant |
| 24 | W. H. Wells | 3½ Indian | 1 | 79·3 | ×100·8 | 498·82 | F. W. Dixon |
| 25 | L. B. Henderson | 3½ Sheffield-Henderson | 1 | 85 | ×88 | 499 | |
| 26 | W. Watson | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | G. S. Davison |
| 27 | S. A. Crabtree | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | Entrant |
| 28 | A. Carton | 3½ Norton | 1 | 79 | ×100 | 490 | Entrant |
| 29 | Rudge-Whitworth, Ltd. | 3½ Rudge | 1 | 85 | ×88 | 499 | H. Riddell |
| 30 | New Imperial Cycles, Ltd. | 2¾ New Imperial | 1 | 70 | ×90 | 349 | H. Le Vack |
| 31 | Norton Motors, Ltd. | 3½ Norton | 1 | 79 | ×100 | 490 | N. Black |
| 32 | Hugh Mason & Co., Ltd. | 3½ N.U.T. | 2 | 54·5 | ×76 | 498 | R. Bowmass |
| 33 | Harold Petty, Ltd. | 3½ Scott | 2 | 69·85 | ×63·5 | 486 | J. H. Simpson |
| 34 | Norton Motors, Ltd. | 3½ Norton | 1 | 79 | ×100 | 490 | R. T. Cawtborne |
| 35 | W. H. Dunwoody | 3½ Rudge | 1 | 85 | ×88 | 499 | H. Burrill |
| 36 | R. M. Knowles | 3½ Norton | 1 | 79 | ×100 | 490 | Entrant |
| 37 | F. E. Baker, Ltd. | 3½ Beardmore Precision | 1 | 81·1 | ×96 | 495 | |
| 38 | T. H. Dickinson | 3½ Duzmo | 1 | 89 | ×79 | 491 | Entrant |
| 39 | Norton Motors, Ltd. | 3½ Norton | 1 | 79 | ×100 | 490 | J. W. Shaw |
| 40 | F. E. Baker, Ltd. | 3½ Beardmore Precision | 1 | 81·1 | ×96 | 495 | |
| 41 | V. Olsson | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | Entrant |
| 42 | W. H. Wells | 3½ Indian | 1 | 79·3 | ×100·8 | 498·82 | D. H. Davidson |
| 43 | L. B. Henderson | 3½ Sheffield-Henderson | 1 | 85 | ×88 | 499 | J. Thomas |
| 44 | John Marston, Ltd. | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | A. Bennett |
| 45 | Porter's Motor Mart | 3½ New Gerrard | 1 | 85 | ×85 | 482 | J. A. Porter |
| 46 | Vic Anstice | 3½ Douglas | 2 | 68 | ×68 | 499 | Entrant |
| 47 | The Triumph Cycle Co., Ltd. | 3½ Triumph | 1 | 85 | ×88 | 499 | F. B. Halford |
| 48 | A. J. Stevens & Co. (1914), Ltd. | 2¾ A.J.S. | 1 | 74 | ×81 | 348 | G. Kelly |
| 49 | The Scott Motor Cycle Co., Ltd. | 3½ Scott Squirrel | 2 | 70 | ×63·5 | 486 | Ivor Thomas |
| 50 | Colmore Depot | 3½ Colmore-Douglas | 2 | 68 | ×68 | 499 | F. T. Hatton |
| 51 | Frank Whitworth, Ltd. | 3½ Douglas | 2 | 68 | ×68 | 499 | A. W. Jones |
| 52 | O. Wade | 2¾ A.J.S. | 1 | 74 | ×81 | 348 | Entrant |
| 53 | Rudge-Whitworth, Ltd. | 3½ Rudge | 1 | 85 | ×88 | 499 | J. H. Mathers |
| 54 | New Hudson, Ltd. | 3½ New Hudson | 1 | 79·5 | ×100 | 496·5 | B. Bourke |
| 55 | Rudge-Whitworth, Ltd. | 3½ Rudge | 1 | 85 | ×88 | 499 | R. B. Ewens |
| 56 | W. H. Wells | 3½ Indian | 1 | 79·3 | ×100·8 | 498·82 | C. Stead |
| 57 | G. Cowley, Senr. | 3½ Sunbeam | 1 | 85 | ×88 | 499 | Entrant |
| 58 | W. Johnson | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | Entrant |
| 59 | J. H. Illingworth | 3½ Norton | 1 | 79 | ×100 | 490 | Entrant |
| 60 | New Hudson, Ltd. | 3½ New Hudson | 1 | 79·5 | ×100 | 496·5 | E. Mundey |
| 61 | John Marston, Ltd. | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | G. Dance |
| 62 | Rudge-Whitworth, Ltd. | 3½ Rudge | 1 | 85 | ×88 | 499 | W. L. Danskin |
| 63 | Massey-Arran Motor Co., Ltd. | 2¾ Massey-Arran | 1 | 71 | ×88 | 348 | J. Whalley |
| 64 | The Triumph Cycle Co., Ltd. | 3½ Triumph | 1 | 85 | ×88 | 499 | F. G. Edmond |
| 65 | Colmore Depot | 3½ Colmore-Douglas | 2 | 68 | ×68 | 499 | S. Ollerhead |
| 66 | The Scott Motor Cycle Co., Ltd. | 3½ Scott Squirrel | 2 | 70 | ×63·5 | 486 | H. Langman |
| 67 | Alec Jackson | 3½ Sunbeam | 1 | 77 | ×105·5 | 492 | Entrant |

# CURRENT CHAT (continued from p. 709)

### This Year's "Petrol St. Leger."

The Doncaster and District Motor Cycle Club, whose "Petrol St. Leger Meeting" last season was such a great success, has arranged for its first speed trial to be held on the Sandall Beat Road, adjoining the Racecourse, on Saturday, June 17th.

### Overheard Last Week.

Friend (to amateur motor cyclist, after his first run): "Well, how have you managed, old man?"

Amateur motor cyclist, with enthusiasm: "Fine! Passed everything on the road. Never been in top gear once!"

### Police and Derby Speed Events.

Numerous complaints have been received by the Derbyshire Police regarding the conduct of motorists (not always competitors) at hill-climbs in Derbyshire, and Ruislip Edge is already closed to speed events. According to the secretary of the Buxton club the whole country will soon be in the same state unless there is a general improvement at these affairs.

### Midland Centre's Change of Policy.

There will be nothing of a freakish nature in the route of the Midland Centre A.C.U. open trial to be held on June 24th; in fact, "it will be in the nature of an enjoyable day trip amongst very nice scenery." No indication has, as yet, been given as to how the awards will be allotted, but full particulars will be available shortly from Mr. J. E. Spencer, 27, Priory Street, Coventry.

### The Secret Places of the Dashboard.

H. G. Wells' latest novel, "The Secret Places of the Heart," contains much psycho-analytic meditation upon which it is neither our province nor desire to comment, but we certainly think that one of the guilty parties might derive more benefit from a course of motor driving lessons. According to this month's instalment of the serial form, "he had come round a corner at five-and-twenty miles an hour, and had *stopped his spark* and pulled up neatly within a yard of the fore wheel of a waggon that was turning in the road . . ." The italics are not Mr. Wells'.

### 93 Motorists Fined in Two Hours.

The Manchester City magistrates established something like a record recently. In a matter of two hours they fined no fewer than 93 motorists for various offences under the Motor Car Act, of which the following is an analysis:—

| | |
|---|---|
| Not licensed | 22 |
| No finance licence | 30 |
| Dangerous driving | 11 |
| No front plate | 3 |
| No rear plate | 2 |
| Not producing licence | 2 |
| Using unregistered car | 1 |
| No licence attached | 2 |
| Altering registration book | 1 |
| Front number not as required | 1 |
| Not keeping an accurate record | 1 |
| Front number obscured | 2 |
| Not giving warning for order of approach | 1 |
| Rear lamp not burning | 5 |
| Aiding the use of an unregistered car | 1 |
| Not inserting registered owner's name | 1 |
| Failing to stop | 1 |
| No white light | 2 |
| Rear number obscured | 1 |
| Rear number plate not clear | 1 |
| No red light | 1 |
| Quitting | 1 |

### Freak Trials and the A.C.U.

*Apropos* the correspondence which has appeared in our pages relating to open "freak" routes, a correspondent suggests that room for complaint might be removed if the A.C.U. stewards covered the course on a motor cycle. An observer who merely goes from point to point does not obtain a true idea of the nature of a trial; especially is this the case when this official's vehicle happens to be a car.

### International Six Days' Trial Poser.

Norway is anxious to send a team to compete in the International Six Days Trials, to be held in Switzerland from August 3rd to 9th. Unfortunately, the rules state that an international team must be composed of machines manufactured in the country entering, and Norway has no indigenous make. The matter, however, is being left to the Swiss Motor Cycle Union to decide as to whether or not Norway should be allowed to enter the British machines which they desire to ride.

Entries for this event close on July 1st at ordinary fees—manufacturers' entries 300 francs (£13 0s. 5d.), private owners 150 francs (£6 0s. 2½d.)—and at double fees on July 20th. They should be sent c/o the Auto Cycle Union, 83, Pall Mall, London, S.W.1.

### A Swedish Event.

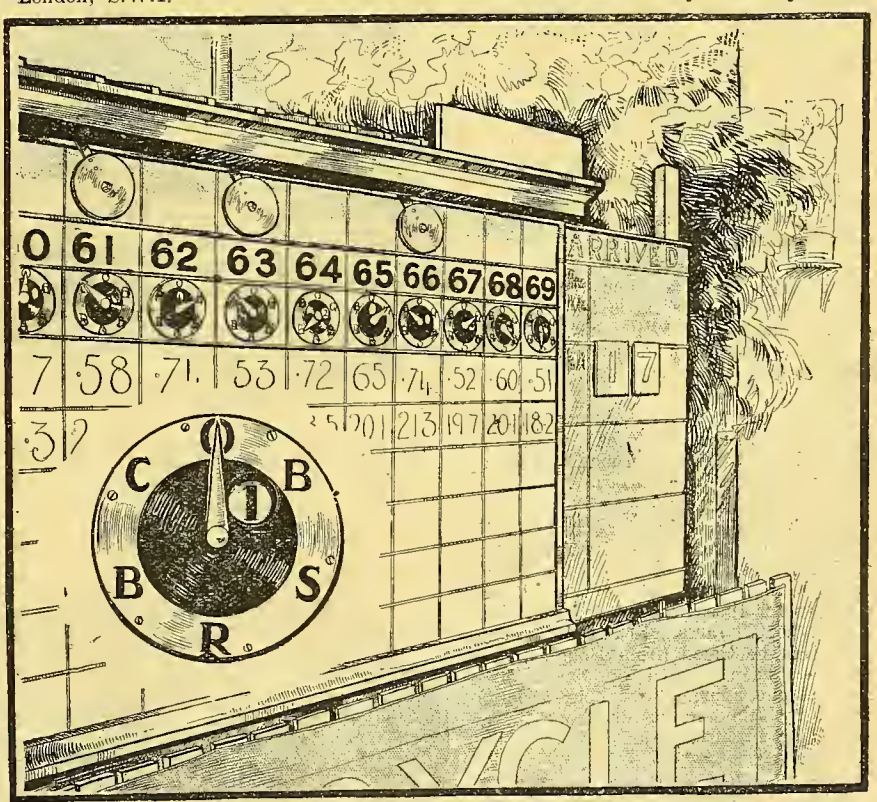
During the Schevenigen Automobile Show, races for cars and motor cycles were held on the promenade. The motor cycle event was won by a Dutch motor cyclist, M. Herkuleyns, who riding a Harley-Davidson made fastest time, being credited with a speed of 94 miles an hour over the flying kilometre.

### Profitable Reading.

In a recent issue of *Pitman's Journal*, while giving advice as to "Profitable Reading," Mr. Edward S. Hodgson remarks:—

"Shorthand-typists are generally voracious readers, as I found when business in London compelled me to journey daily from the outlying suburbs to the City. And—I am referring more particularly to the ladies now—their taste is extremely catholic, for it embraces the best-seller of the day and the now little-read classics, trade publications (I have seen more than one girl with *The Motor Cycle*) and the light three-halfpenny weeklies."

While thanking our fellow-scribe for his testimony, we may tell him that *The Motor Cycle* is glad to number among its readers thousands of ladies; in fact, a regular feature of this journal is devoted to the interests of lady motor cyclists.



To aid spectators in following the T.T. an ingenious new score board is being used. Competitors' numbers are placed above the lower row of (red) discs, and the top row (yellow) discs only appear as the riders reach Governor's Bridge. The red indicator disc is shown in detail in the inset; besides telling the lap number, the actual point the competitor has just passed is shown by the indicator, thus:—O. Start; B. Ballacraine; S. Sulby; R. Ramsey; B. Bungalow; C. Craig-ny-Baa. Below the competitors' speeds for each lap are painted.

# T.T. NOTES and NEWS

## Final Notes on the Senior Practising. Interesting Machines in To-day's Big Race.

THE Lightweight and Junior Tourist Trophy races have been won and lost, and all eyes of the motor cycle world are again turned towards the Isle of Man, where the Senior (500 c.c.) machines are competing for the coveted trophy.

* * * *

Each year sees fewer and fewer multi-cylinder machines in the races. The 1922 Senior event has attracted but one V twin, while five each two-stroke twins and flat twins are included in the entry of sixty-seven. Does this mean that capacity for capacity the single-cylinder engine is the more efficient? It would appear so. But should the V twin N.U.T. win, next year's entries may be in very different proportions.

* * * * *

Six members of the Bradford M.C. and L.C.C. are riding in the Senior T.T. Two teams have, therefore, been nominated for the club team award:—

FIRST TEAM.
C. P. Wood (Scott).
H. Langman (Scott).
J. H. Simpson (Scott).

SECOND TEAM.
F. W. Dixon (Indian).
R. T. Cawthorne (Norton).
J. H. Illingworth (Norton).

* * * *

Stray horses were on the course at Crosby one morning, but they did not cause anything worse than several anxious moments.

* * * *

G. Cowley, sen., is almost a second "Pa" Applebee, for he is 57 years of age, but has been handling his Sunbeam well and getting round the course in about the hour every morning.

* * * *

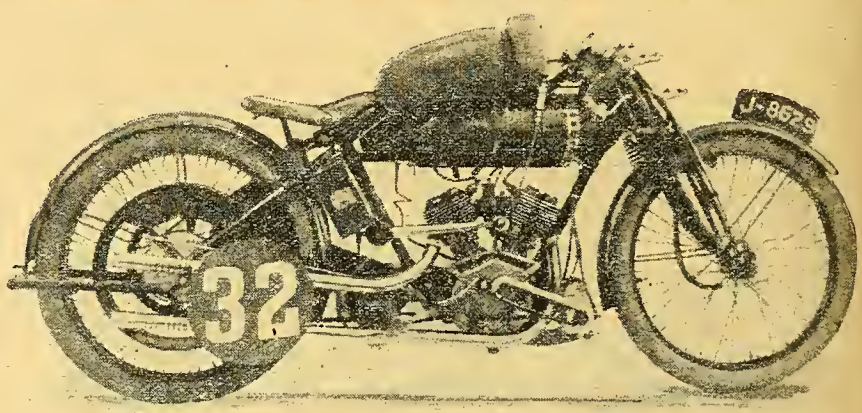
Scotts appear to have found an increase in speed, for in the first week's practising the one ridden by Langman made its officially timed circuit in 43m. 50s.

* * * *

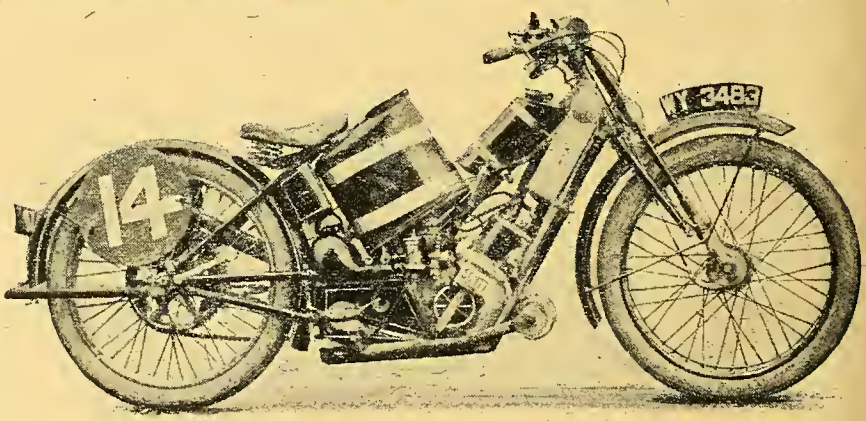
In the first 5 days 53 riders out of the 185 competitors and reserves had put in their qualifying laps, *i.e.*, five laps for those who have not previously competed, or three laps for those who started in either the 1920 or 1921 races. In either case one lap had to be timed (from Douglas) and must have been covered by Senior machines in one hour, in one hour and ten minutes by Juniors, and one hour thirty minutes by Lightweights.

* * * *

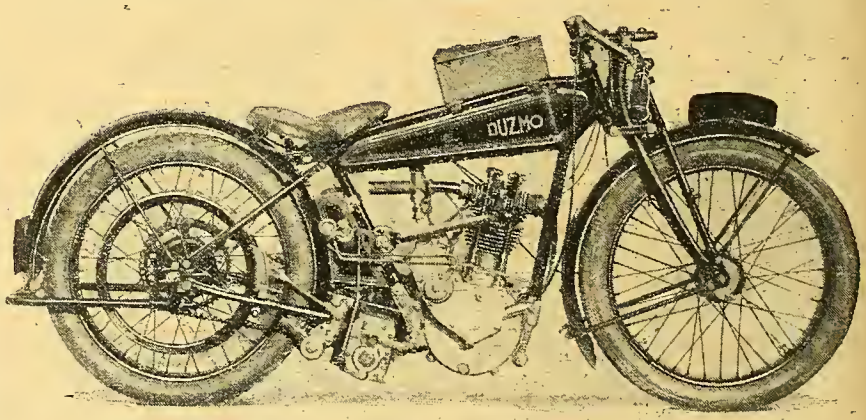
Under the charge of Graham Walker the Norton private owners' stable was a little hive of happy industry in the early days of the practising period. The Nortons appear to be unnumbered—there are fourteen actually, with three reserves. Walker has been putting in his practice laps on the o.h.v. model.



The only V twin in the Senior race—the N.U.T. Observe the cushion on the top tube.



Twice winners of the Senior Tourist Trophy, the Scotts in to-day's race are expected to be well in the running.



Racy lines are lent to the T.T. Duzmo by its short wheelbase and compact layout.

**T.T. Notes and News.—**

Few changes have been made to the 3½ h.p. Duzmo which will compete in the T.T. race. An inclined engine is the most noticable alteration, but a new frame providing a shorter wheelbase is now used. This design will, in future, become the standard sporting model.

A three-speed Sturmey-Archer gear box is used. The Brampton front forks have been modified, and the horizontal springs have been removed to provide more rigid steering. Best and Lloyd mechanical lubrication, an Amac carburetter, and E.I.C. magneto are employed.

* * * *

Much uneasiness was caused last week by the unsportsmanlike attitude of several riders who persistently rode their T.T. mounts in and about Douglas, revving their engines unnecessarily and deafening everyone with the bellowing of open exhausts. Disqualifications were threatened in consequence of riders taking T.T. machines on the course during the day. The police took action in one or two instances.

* * * *

Quality in cornering and acceleration when picking up on the level are well watched at Quarter Bridge, for it is a splendid test, especially for the riders of judgment.

According to the *Daily Mail* on Monday G. Estobart was to ride the 20¼ New Hudson two-stroke, but Mundey would race a 30½ h.p. model in the Senior. V. Hosman was reported as being unable to ride, and that his place would be taken by another rider on the 20¾ Raleigh. Haldervell was "down" to ride a Norton.

* * * *

A much-visited point of interest during practising was Quarter Bridge, which is only about a mile from Douglas. The corner there is almost a right-angle, and is situated at the foot of an appreciable gradient. It is a sharp main-road bend which may be taken at speeds up to 30 to 32 m.p.h. by a good rider.

* * * *

Wednesday morning last week was the first really fine, summer-like morning since the start of practising ten days ago, and it was signalised by the wholesale breaking of the record laps of 1921.

* * * *

L. Handley, riding a 248 c.c. O.K. Junior, covered a lap in 45m. 50s., 3m. 17s. less than B. Kershaw's time last year of 49m. 7s. on a New Imperial.

* * * *

In the Senior category, H. Langman (482 c.c. Scott) covered a lap in 39m. 55s., as against F. G. Edmond's fastest lap in last year's race of 40m. 8s., on a Triumph. Langman's speed equalled something over 57 m.p.h.

* * * *

During last week it became necessary to substitute cast-iron for aluminium pistons in the Norton engines, and the camp was busy re-balancing.

Of those riders observed at Quarter Bridge undoubtedly the best cornerists we have seen are G. Clapham, who was entered by the Ilkley M.C.C., and A. E. Taylor; they ride Scott and Rudge machines respectively, and in particular the former leaned over quite 48° from the vertical.

* * * *

Although the 1922 two-speed Scotts have not the same musical capabilities as the four-speeders used last year, C. P. Wood's machine has vocal powers which extend to the first bars of *a che la morte* when accelerating into the distance.

* * * *

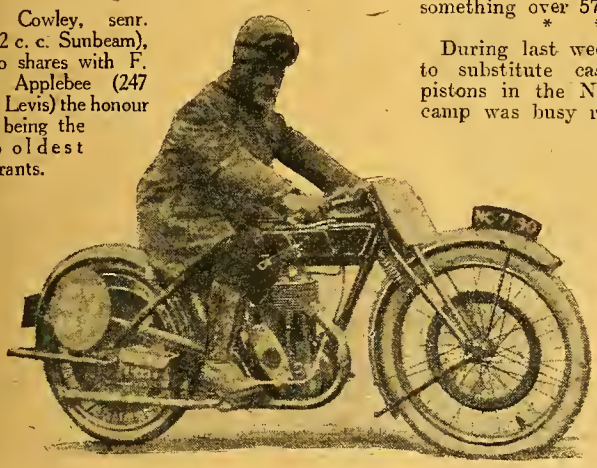
H. R. Davies appeared to be on a bad patch of ill-luck early last week, for he had trouble on both Tuesday and Wednesday.

* * * *

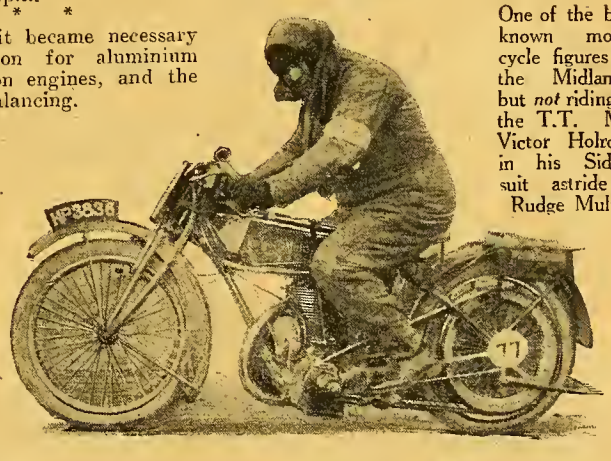
Arriving late at the end of the first practice week, G. Dance (Sunbeam) completed his initial circuit on Tuesday of last week in 41 mins. 5 secs.

* * * *

A standard Barr and Stroud engine with a Zephyr type piston is fitted in the Diamond machine ridden by J. Price. The engine was dismantled late last week after several practice laps and was in splendid condition; the working polish on the sleeve and cylinder bore being perfect.

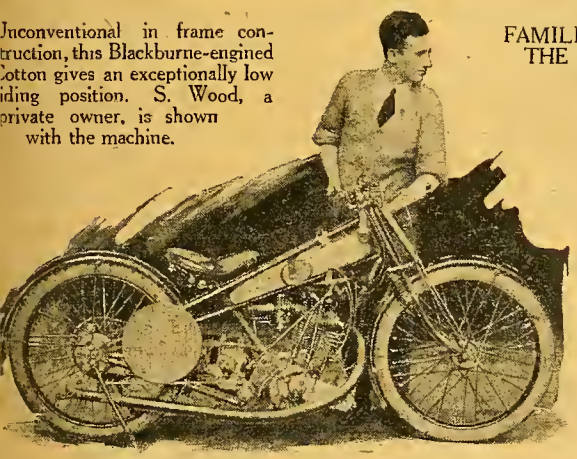


G. Cowley, senr. (492 c. c. Sunbeam), who shares with F. W. Applebee (247 c.c. Levis) the honour of being the two oldest entrants.

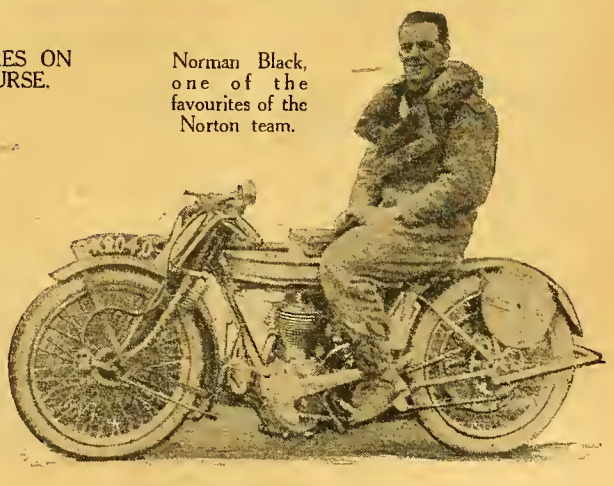


One of the best known motor cycle figures in the Midlands, but *not* riding in the T.T. Mr. Victor Holroyd in his Sidcot suit astride a Rudge Multi.

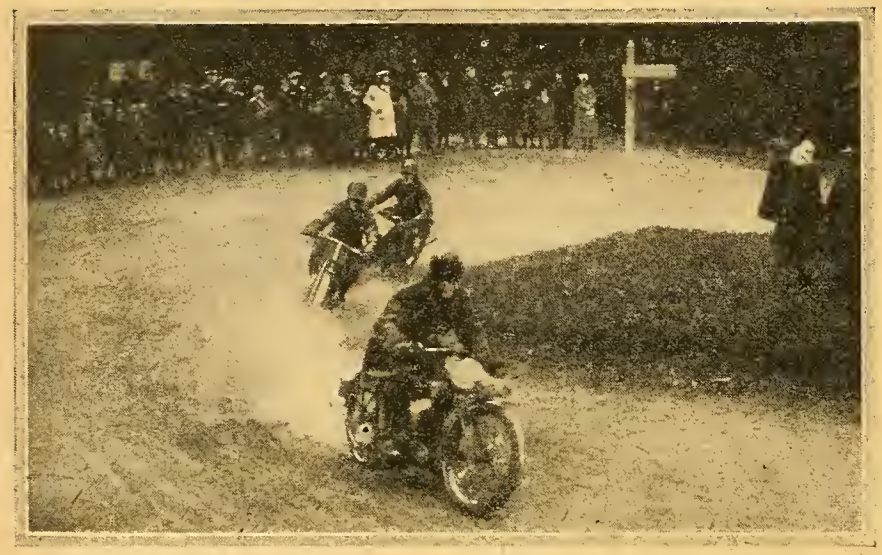
FAMILIAR FIGURES ON THE I.O.M. COURSE.



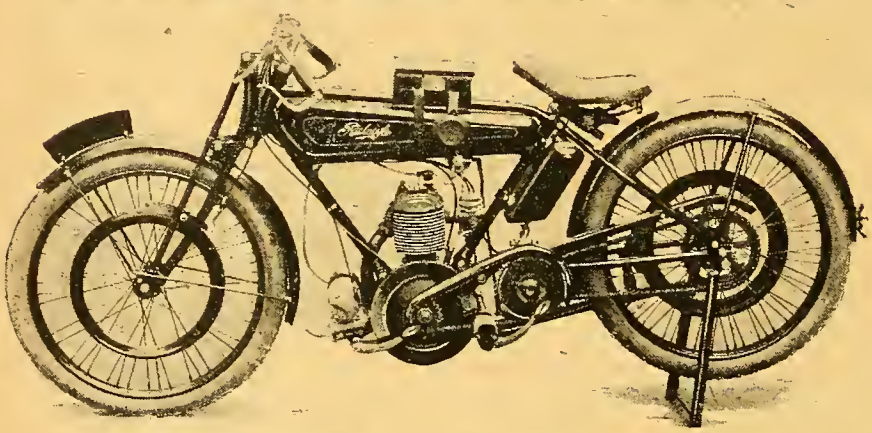
Unconventional in frame construction, this Blackburne-engined Cotton gives an exceptionally low riding position. S. Wood, a private owner, is shown with the machine.



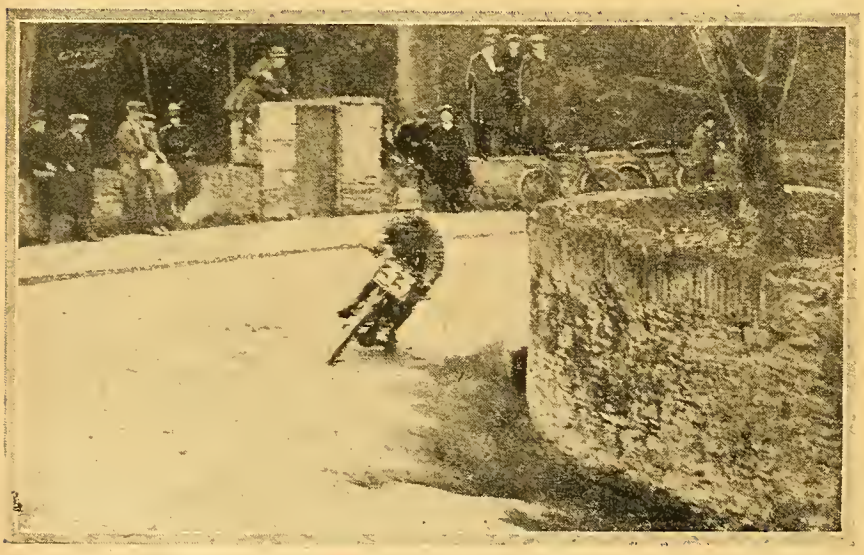
Norman Black, one of the favourites of the Norton team.



One of the most interesting vantage points on the whole of the course—the Ramsey hairpin.



There is very little change in the Raleigh which ran in Tuesday's race.



J. H. Simpson (486 c.c. Scott) scraping a footrest at Governor's Bridge.

O. M. Baldwin, A. E. Taylor, and J. A. Watson-Bourne are selected as the Rudge team.

* * * *

"June 1st is the day to show what you can do," said George Dance, the Sunbeam rider, when questioned on the wonderful lap times of last Wednesday morning.

* * * *

Carburation troubles beset the Douglas riders, and last week Atmos carburetters were being tried; A. H. Alexander, however, had a B. and B. on each cylinder; cross-bars fitted on the timing cover connect up each throttle and air slide by levers and wires, the single control wires thus operating both carburetters simultaneously.

* * * *

Two-strokes did not show to great advantage in either Lightweight or Junior practice laps. It seems that two-stroke engines have lagged behind in development when compared with four-strokes.

* * * *

Finding their steering somewhat affected by the whippiness of the Beardmore-Precision front forks, the riders damped the springs by wrappings of cord and insulation tape, with beneficial results.

* * *

A thicker oil considerably improved the excessive lubrication which affected the Sun-Vitesse machines. They increased in speed and emitted less smoke.

* * *

Owing to the change of plug position from the centre of the head to the side, Triumph compression ratio has been lowered to about 5 to 1.

* * *

A distinctive feature of the Triumph machines is the squealing of the front brakes (which are of the contracting cable type similar to those used for years on the same make of pedal cycles). The new brake has decided stopping powers.

* * *

Depending on its actual success in these races, there is every chance of the 350 c.c. o.h.v. A.J.S. becoming a marketable production.

* * *

Plug trouble was by no means uncommon throughout the practising. It is partly ascribable to excessively high compressions and partly, according to some experts, to the high pressures set up by pre-ignition arising from the overheated edges of very light valves.

* *

Misfiring appeared to be the bane of Pullin's existence; the raw morning air apparently did not suit the constitution of the Douglas machines, and the flaming blow-back through their carburetters was a sight to behold.

* * *

Brandish, the Triumph rider, corners particularly well; he uses both brakes on such a corner as Governor's Bridge, decelerating quickly, and after cornering safely and well, accelerating like a shot.

* * *

A number of riders are fitting a neat spark gap (embodied in a slightly enlarged plug wire terminal), introduced by the makers of Lodge plugs.

**T.T. Notes and News.—**

On the real hairpin bends the Scotts stick as tightly to the inside as a burr on a blanket.

* * *

When it seems desirable that the wheels should really turn round, Edmond (Triumph) is the man to make them do it.

* * *

Interconnected brakes on the A.J.S. machines were abandoned early in the practising.

* * *

One of the few men amongst the seniors to trail his foot on Governor's Bridge hairpin was R. M. Knowles (Norton), but his get-away was remarkably good in common with the other Nortons, which appear to steer, hold the road, and accelerate better than ever.

* * *

Controlling an Indian appears to be a work of art, judging by the number of things Alexander does all at once with both hands and feet after recovering from such a corner as Governor's Bridge; Dixon, however, sits like a part of his machine, handling it superbly and accelerating like an arrow from the bow. Dixon's record practice lap last week necessitated some thrilling riding.

* * *

Owing to difficulties found in holding the Douglas machines at speed on the bumpy course, the steering rake was modified by using different fork links; the steering was then much more controllable.

* * * *

Dr. Hopwood, the Levis rider, has already submitted an entry for next year's T.T., but has not decided what his machine will be; in the Island he has had a selection from his stable of cars and cycles, consisting of a Levis, Leboh (own make), Scott, and A.B.C.

* * * *

Neither Duzmo nor New Hudson machines have distinguished themselves in practice, but they appear to have reliability in their favour, and both look workmanlike. The latter machine, indeed, shorn of some weight (the sidecar lugs in the frame, for example) should make a fine solo mount, for the design is exceedingly clean.

* * * *

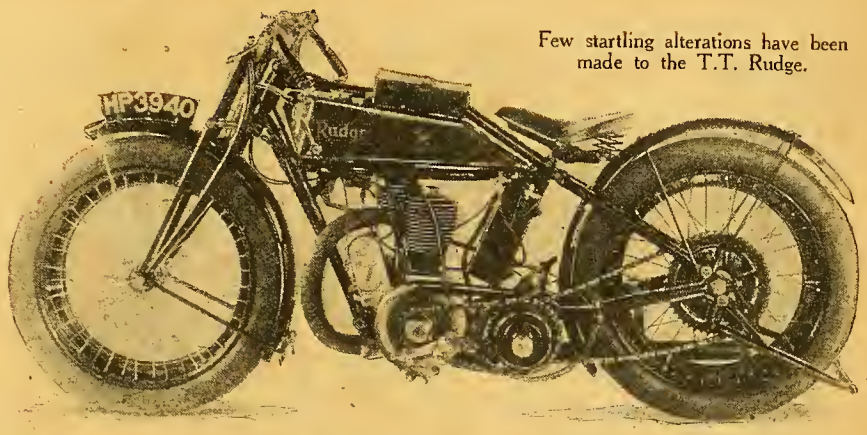
Twist-grip controls were fitted to many machines last week. H. R. Davies (A.J.S.) used them one morning in practice, but appeared to have reverted to levers again.

* * * *

It is confidently expected that to-day's race will be won at an average lap time of about 38 minutes

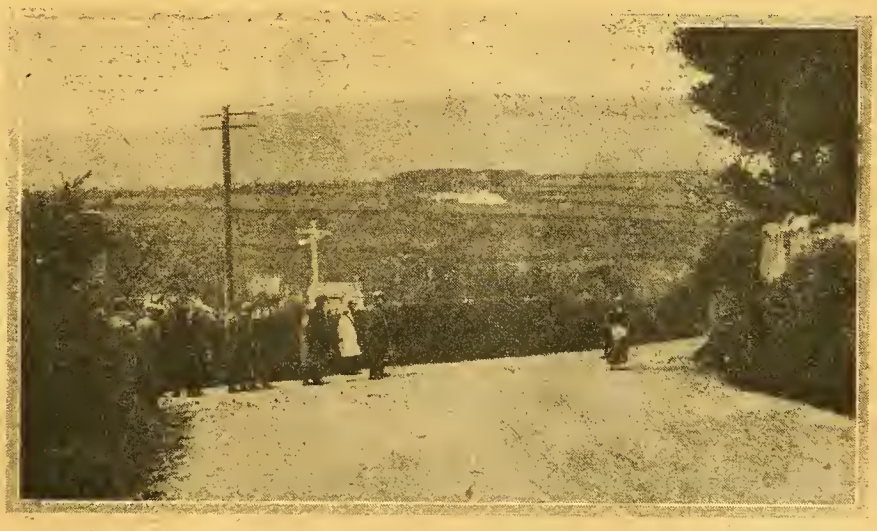
* * * *

An extra spark at the plug at very high revolutions 180° after the proper spark has been worrying the super-tuners in one camp. Magneto experts say that this is due to the high-tension winding itself generating a current of its own at great speeds—a low-tension current, of course, but of sufficient intensity to give a weak spark at the moment of flux reversal to the armature.

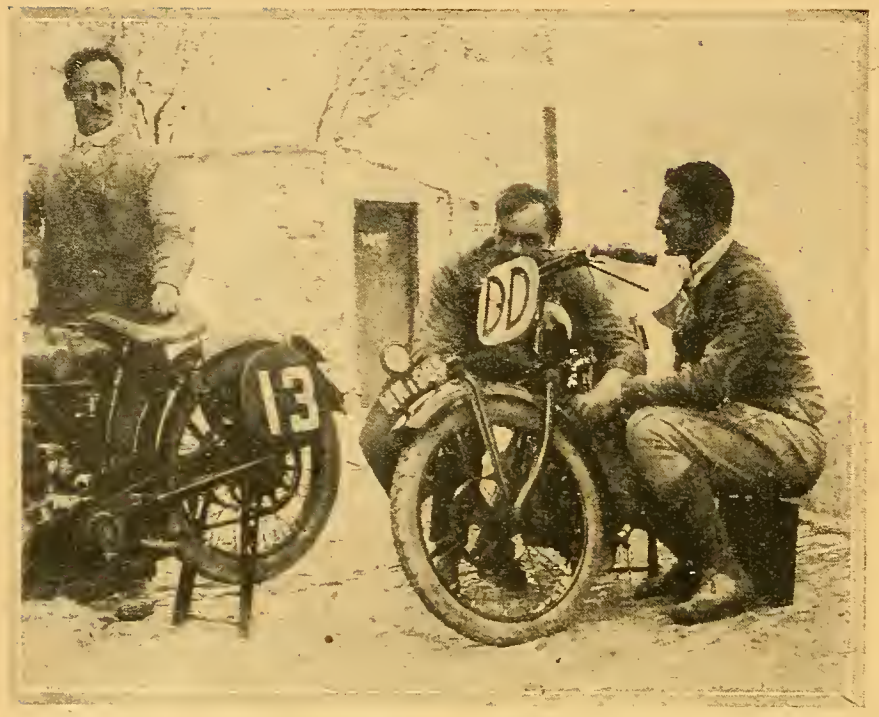


Few startling alterations have been made to the T.T. Rudge.

At Governor's Bridge. It is at such a corner as this where the driver of outstanding ability—the rare exception—excels over the average racing man. He loses fewer seconds and at the same time risks less.



An early morning scene at Cronk-ny-Mona. A Scott rider, C. W. Fairweather, on the slight gradient.



At the Beardmore-Precision stable. The distinction of piloting a No. "13" is shared with a Coulson rider in the Junior race.

Both the N.U.T. machines get along well, and they have several fast practice laps to their credit. Porter's 486 c.c. New Gerrard is another machine with the same type of engine (a V twin side-valve J.A.P.), which has shown excellent capabilities.

* * * *

Carburetter makers were represented in full force, all claiming "the last ounce." Amacs were represented by "the genial Mr. Clibbery" and Leslie Guy, one-time famous Scott rider, Cox Atmos by Mr. Cox, Mr. Cox, jun., and Oswald Hayes, the 1921 Colmore Cup winner, and B. and B. by S. C. Toye and Neville O. Soresby, familiar to older motor cyclists as a pre-war Rudge competition rider.

* * * *

After the bright green gratuitous Rudge handkerchiefs, K.L.G booklets of matches (Bryant and May ignition!) have been easily the most popular thing in everyday use in the Isle of Man. Then there are the Levis miniature screw-drivers, while anyone leaving a sidecar unattended near the Sefton Hotel was in danger of finding a J.A.P. pencil therein on his return.

* * * *

On Thursday morning last F. W. Dixon (Indian) set out to make a record practice lap, and by covering the circuit in 39m. 11s. he succeeded in beating Langman's record lap of the previous day on the Scott by 44s.

During this circuit Dixon's descent of Snaefell was terrific; from Keppel Gate to Craig-ny-Baa he came like a stone falling from a cliff, and scarcely slowed for the bend at the latter place.

* * * *

C. P. Wood has had a pair of leather breeches dyed Scott purple—his retreating figure offers as good a mark to the camera man as does a scurrying rabbit to the sporting farmer.

* * * *

One of the most cheerful-looking riders on the course is F. G. Edmond (Triumph). No matter how fast he goes he never looks "fashed," as they say up North.

* * * *

For a chance of victory in to-day's race, the A.J.S. riders, on their 350 c.c. mounts, obviously depend to some extent on saving fifths of seconds while cornering; to a man they are fearless in the extreme.

* * * *

Victor Horsman suffered a fall near Crosby last Thursday, the front tyre of his Norton suddenly deflating at speed.

* * * *

H. O. Wood (Tim) was out as a Scott reserve man; he says that nowadays he is past T.T. riding, but many of the entrants envy his time of 43m. 35s.

* * * *

To be reckoned with, even in the Senior race, is Le Vack on the New Imperial; his best lap was 42m. 6s.

* * * *

Some good lap times in the Lightweight class were made by: R. W. Loughton (248 Francis-Barnett), two laps, 48.50 and 46.40; F. C. North (248 O.K. Junior), 48.7; G. Denley (249 Velocette), two laps, 49.15 and 48.0.

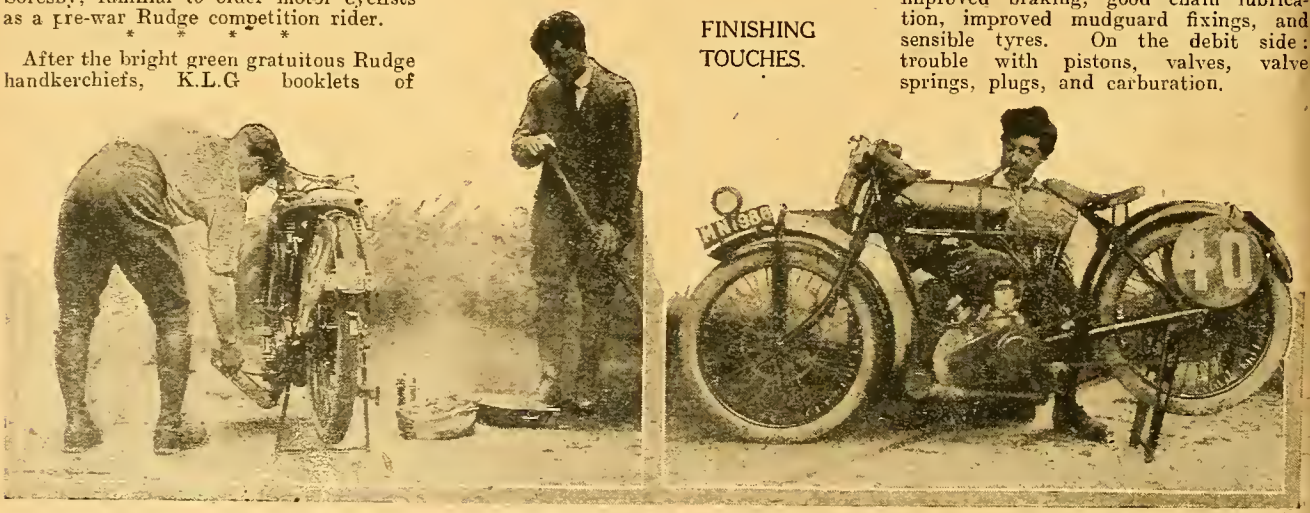
* * * *

In the Junior class the best practice time was made by H. R. Davies (349 A.J.S.), two laps, 41.45, 40.55.

* * * *

To sum up the lessons of the practising in a few words, we should say, on the credit side: Mechanical oil pumps, lower and easier steering frames, improved braking, good chain lubrication, improved mudguard fixings, and sensible tyres. On the debit side: trouble with pistons, valves, valve springs, plugs, and carburation.

## FINISHING TOUCHES.



Scenes at the Scott and Beardmore-Precision depots.

M. Sheard, on an A.J.S., wins the Junior Tourist Trophy at 54·75 m.p.h.; G. Grinton (A.J.S.), second; C. G. Pullin (Douglas), third. A Levis, ridden by G. S. Davison, gains the Lightweight Trophy, with D. Young (Rex-Acme), and S. J. Jones (Velocette), second and third respectively.

## TOTAL DISTANCE AND SENIOR LAP RECORDS BROKEN.

THE chief features of Tuesday's Junior T.T. Race were the fourth successive victory of the invincible A.J.S. and the first victory of a Manxman, T. M. Sheard, who was followed home by G. Grinton on a sister machine, C. G. Pullin (Douglas) being third.

The race occupied some ten minutes less than in 1921, Sheard winning at an average speed of 54.75 m.p.h. The first six places in the Lightweight Race fell to the machines of six different makers. S. S. Davison (Levis) finished over thirteen minutes ahead of the fastest four-stroke in the shape of a very dark horse in Dan Young, who rode the only Rex-Acme-Blackburne in the race. Another two-stroke rider, Jones (Velocette) ran third, little over a minute behind Young.

### Lightweights 25 mins. Faster than 1921.

The Lightweight winner covered the course in notably faster time than his 1921 predecessor, for a reduction of over twenty-five minutes raised the winning speed to 49.89 m.p.h.

As the stands filled up on Tuesday morning the sun was quite oppressively hot; Snaefell was sharply silhouetted against a glowing sky, and the roads were dusty. Crowds were hardly so large as usual either at the start or along the course, but the summer attire of the ladies added bright notes of colour to a gay panorama.

As the National Anthem announced the arrival of the Lieutenant-Governor, a silent phalanx of riders in yellow and green and red racing colours appeared wheeling their machines to the starting line from the official storage tent; Prentice, last year's Lightweight winner, moved up to the timekeeper's box, and as he received the word "Go" at 10 a.m. maroons signalled to the whole Island that another T.T. had begun. Numbers 1 to 32 (250 c.c. machines), with green number plates, were sent off first, the 350 c.c. class, 33 to 70, with blue numbers, following at half-minute intervals. Therefore No. 70 had to stand in the road thirty-five minutes wondering whether his engine would start obediently after standing twenty-four hours. Many of the men had applied paraffin injections as a precaution before storing their mounts on Monday, and the engines usually fired in a yard or two.

There were some alterations to the programme previously published in *The Motor Cycle*. L. Horton rode a New Imperial and Stobart replaced Mundey on a New Hudson. In the Junior entry Victor Horsman's arm was still too stiff for racing, and Albert Milner pluckily decided to ride the Raleigh, although he had not ridden one prior to the race; Ivor Thomas took the place of Strange (Sheffield-Henderson); Schofield (New Comet) did not start.

Careful acceleration was the order of the day. Cold oil in their crank cases troubled Jones (Velocette) and Simister (Diamond). Dr. Hopwood sucked a cigarette nonchalantly; Marchant and Edwards found their engines rather irresponsive; and Woods dropped a spare plug and actually came back for it!

Special ovations were awarded to J. Whalley for his plucky ride in 1921, to

T. M. Sheard (348 A.J.S.), the winner of Tuesday's Junior T.T. Race in record time.

**THE 1922 LIGHTWEIGHT RACE IN A NUTSHELL.**

Winner:
**G. S. Davison** (Levis).
Average speed, 49.89 m.p.h.

Second:
**D. Young** (Rex-Acme).

Third:
**S. J. Jones** (Velocette).

**THE 1922 JUNIOR RACE IN A NUTSHELL.**

Winner:
**T. M. Sheard** (A.J.S.).
Average speed, 54.75 m.p.h.

Second:
**G. Grinton** (A.J.S.).

Third:
**C. G. Pullin** (Douglas).

**T.T. Notes and News.—**

the veteran, "Pa" Applebee, who paused at the top of Bray Hill, to Sheard as a Manxman, to Howard Davies for his last year's performance, and to Harris as the popular tip for first in the 1922 Junior.

The rather "finicky" little progress clocks on the scoreboard already indicated changes in order, Handley's O.K. obviously beginning to race through the Lightweight field. Just as the last man left, the megaphone announced Searle's collision with Ballacraine Hotel, which had done him no harm. Thirteen minutes after the last man had gone a yellow plaque indicating No. 2 had passed Governor's Bridge suggested that Joynson (Invicta) had smashed the 1921 lap record even with the handicap of a standing start, but Davison (Levis), close on his heels, had actually cut the lap record by nearly five minutes; and when Handley arrived he was eleven seconds faster than the Levis.

Presently the first 350 c.c. machine, Davies, came in just three seconds outside the Senior record for a flying lap (56 m.p.h.). To everybody's dismay he paid a hasty visit to his depot without stopping his engine. Then Le Vack knocked four seconds off the Senior record, and Harris lapped one second faster than Davies.

## Excitement increases.

Excitement ran high, but as nearly all starters completed their first lap some time elapsed before the scoring board revealed how both races stood.

Marchant (Sheffield-Henderson) hit Sulby Bridge and damaged his oil tank; Dale (New Scale) crashed more heavily at the same point, requiring medical attention which lost him thirty-five minutes.

T. M. Sheard, the first native of the Isle of Man to win a T.T. His time was 3 hr. 26 m. 48 s., and his mount an A.J.S.

Inset, G. Grinton, who was second on a sister machine.

Kelly (A.J.S.) came off in Sulby Village, bending his forks so badly that he had to retire.

First lap times (250 c.c.).

| | | |
|---|---|---|
| Handley (O.K.) | ... | *44m. 24s. |
| Davison (Levis) | ... | 44m. 35s. |
| Kershaw (New Imperial) | ... | 45m. 37s. |
| Pike (Levis) | ... | 46m. 26s. |
| J. C. Whalley (Massey-Arran) | | 46m. 42s. |
| Loughton (Francis-Barnett) | ... | 46m. 52s. |

(350 c.c.)

| | | |
|---|---|---|

| Harris (A.J.S.) | ... | 40m. 10s. |
| Davies (A.J.S.) | ... | 40m. 11s. |
| Woods (Cotton) | ... | 40m. 50s. |
| Longman (A.J.S.) | ... | 40m. 55s. |
| Sheard (A.J.S.) | ... | 40m. 59s. |

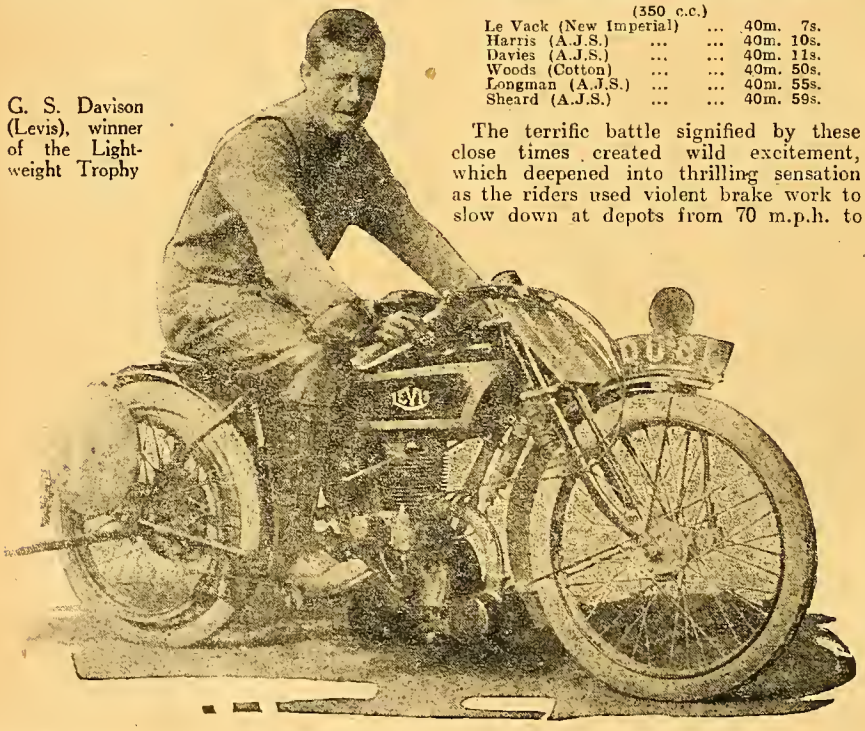
The terrific battle signified by these close times created wild excitement, which deepened into thrilling sensation as the riders used violent brake work to slow down at depots from 70 m.p.h. to pick up petrol. After two laps Woods left his engine running while he replenished his tank with petrol, and it caught fire, which spread to his depot. Woods staggered across the road with flames rising from his clothing, and men rushed to his assistance. Pyrene came to the rescue in the nick of time, and thirty seconds later he continued.

Most riders kept their engines running for reasons justified by their times. Price lost in trying to restart.

As twenty-seven seconds covered the leading trio of Juniors after two laps, the spectators along the course were very uncertain how matters stood.

A sensational New Imperial win in both events began to be mooted. But Davison's engine had a lovely purr, and four of the redoubtable A.J.S. team were hard on Le Vack's heels.

Those on the stands watched the scoring board eagerly.



G. S. Davison (Levis), winner of the Lightweight Trophy

Third lap times (250 c.c.).

| | | |
|---|---|---|
| Davison (Levis) | ... | 2h. 13m. 59s. |
| Kershaw (New Imperial) | | 2h. 17m. 46s. |

| Woods (Cotton) | ... | 2h. 11m. 6s. |

By the fourth lap even the crowd on the grandstand was somewhat befogged as to the state of the racing. Discs professing to show men's positions were not punctually operated, times were painted up rather slowly, and there were two

C. G. Pullin (346 Douglas, third in the fourth Junior lap.

H. Le Vack (346 New Imperial) leader in the Junior Race for the first three laps.

H. F. Harris (348 A.J.S.), second in laps one and two of the Junior Race.

H. R. Davies (348 A.J.S.). last year's Senior winner, second in the first and second Junior laps.

F. A. Longman (348 A.J.S.), third at half distance in the Junior event.

W. L. Handley (249 O.K. Junior), leader of the Lightweights at the end of the fitrst lap.

aces to confuse the onlookers. However hen Sheard (350 c.c. class) came in just head of Davison (250 c.c. class), who ad started earlier, and Le Vack's gear ox was reported seized at Windy 'orner, the situation grew fairly clear. Grinton (A.J.S)., a well-known Edinurgh rider, some thirty years old, was vidently a trifle slower than Sheard. Kershaw was out with engine trouble, o we knew the leaders at any rate. Meanwhile poor Woods, who was eartily cheered on each lap for his plnck n continuing after his fire, came into his epot in a very "ricketty" fashion; oil eakage from his charred tank had ruined he brake and he had to switch off and rake with his feet a long way up the oad. His cornering suffered accordngly, and he had a nasty fall at a airpin.

Wood's performance should surely ualify him special consideration when warding the Nisbit Trophy offered for riumph over adversity.

Thomas had lost his gear quadrant and ad to keep the gear engaged by his and.

There had been great slaughter of the vourites by this point. The Lightveight event had been regarded throughut the practice as fairly open, and everal of the leading ten were never eriously fancied. Of the surviving eaders Sheard and Pullin alone were expected" by their supporters. The asualty list inclnded Davies (A.J.S.), e Vack (New Imperial), Harris A.J.S.), Kelly (A.J.S.), Remington Edmund), Longman (A.J.S.), and Vhalley (Massey-Arran). Other retirements gradually came through by telehone, relieving the anxiety of watching riends.

Fourth lap times (250 c.c.).

| | | |
|---|---|---|
| G. S. Davison (Levis) | ... | 3h. 0m. 18s. |
| D. Yonng (Rex-Acme) | ... | 3h. 10m. 25s. |
| S. J. Jones (Velocette) | | 3h. 11m. 25s. |
| Padley (Sheffield-Henderson) | | 3h. 15m. 59s. |
| Prentice (New Imperial) | | 3h. 18m. 34s. |
| Hall (O.K.) | ... ... | 3m. 28m. 32s. |

(350 c.c.)

| | | |
|---|---|---|
| Sheard (A.J.S.) | ... | 2h. 43m. 34s. |
| G. Grinton (A.J.S.) | ... | 2h. 53m. 15s. |
| C. G. Pullin (Douglas) | | 2h. 58m. 9s. |
| Thomas (Sheffield-Henderson) | | 2h. 59m. 18s. |
| Woods (Cotton) | ... | 3h. 2m. 57s. |
| R. Lucas (Coulson) | ... | 3h. 6m. 1s. |

Now commenced the usual breathless vait as the fastest men in each race ackled the last thrilling lap and anxious pectators watched tiny signals indicating ach rider's passage through the five telehone stations recorded on the progress clocks. At the same time allowances had to be calculated from differences in starting times. In the Junior Sheard had started nine minutes ahead of Grinton and had commenced his fifth lap with a nett lead of nearly ten minutes. In the Lightweight Race Young had started 20 minutes behind Davison and now was ten minutes seven seconds behind him. If either leaders sustained slight trouble tight finishes were still possible.

The "clock" men intensified the excitement by leaving the index on Davison's disc pointing to "R" (Ramsey) much too long. Several pathetic spectacles beguiled the wait for real news; Booth came through with one hand-grip turned well up and the other well down.

At 1.45 a yellow placque signalled the arrival of Hill at Governor's Bridge on his first lap of nearly four hours, symbolising some immense Odyssey of troubles. Suddenly Davison's dial finger flew round to "B" (Bungalow); then Sheard was hoisted as past Craig-na-baa. Meanwhile, F. W. Applebee (Levis) received a salvo of cheers as he shot through on his fourth lap.

At last up went the yellow plaque No. 44. T. M. Sheard was at Governor's Bridge, and a Manxman had surely won outright at last. Handkerchiefs were waved, hats flew up into the air; there were cheers and yells and a storm of clapping. Then the band struck up "See the Conquering Hero Comes"—just too slowly, for Sheard crashed past as the opening chord sounded, and his friends rushed to overwhelm him. He looked pale and tired, with his legs barely able to support him. Small wonder, for even on the good tarmac past the stands the fast men were off their saddles more than they were on them.

As his last lap was only just over 43m., obviously no pursuer could wipe off the ten minutes' lead he had held after four laps. His lap times were as fast as they were consistent, viz., 40m. 59s., 40m. 47s., 41m. 47s., 40m. 47s., 40m. 31s.

Hardly had the hubbub subsided than a fresh round of cheering greeted Le Vack, walking in after his retirement. Immediately after, the winning Levis purred in, its engine running with much the same, smooth power as at the start. It was only some twenty minutes slower over the course than the winning 350 c.c. machine, and its time marks a huge advance on the lightweights of 1921. Judging by Davison's jaunty appearance, the Levis had given him a very comfortable ride; he seemed tolerably fresh and full of smiles.

When it was clear that none of the later starters could beat the timets now registered, boy sconts hung laurel wreaths over those columns on the board in which Sheard's and Davison's times were posted.

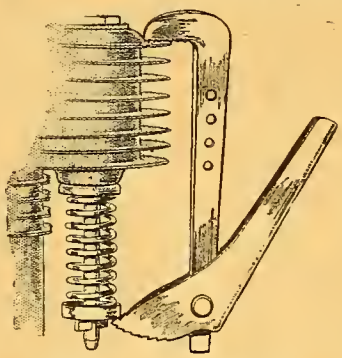
G. Grinton (A.J.S.), second in the Junior, a popular Scotch rider.

d.

# IDEAS Useful and Ingenious

## A Double-purpose Tool.

AN editorial blessing on Mr. A. Rouse, a Cambridgeshire reader, has been passed by a member of our staff who, in his irresponsible moments, uses a machine of his own constructing. Hitherto he has carried a pair of "Footprints" and a valve-extracting tool, now the latter is left at home, for, thanks to Mr. Rouse's idea, the former serves a dual purpose.



Ingenious adaptation of "Footprint" grips as a valve spring lifter.

Holes are drilled in the straight leg of the grips near the end, and a couple of teeth filed on the back of the movable jaw, which for valve removing operations is reversed and used as shown in the sketch. The only objection to this scheme is that all motor cyclists do not carry "Footprints," and fewer still admit it if they do; nevertheless it is an excellent tool in certain circumstances, but "to use it like a giant is tyrannous."

## Lighting the Speedometer.

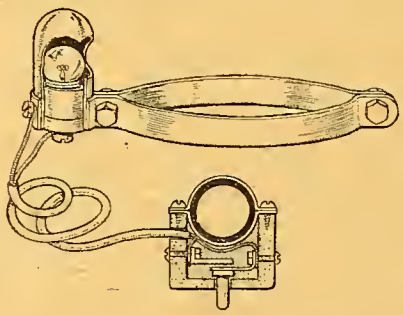
TO provide a guide to lubrication by watching the mileage counter was the origin of Mr. C. C. King's idea of constructing a speedometer lamp, and as his machine is equipped with acetylene lighting, a readily operated switch so that the lamp could be used intermittently had also to be devised. Thanks to this method of use the accumulator gives service of long periods on one charge.

The lamp itself is made from a piece of ⅜in. round brass rod, filed spherical at one end and drilled up the other to accommodate snugly a miniature screw bulb holder such as can be bought at any electrical shop. A transverse slit allows the light to pass on to the speedometer. The bulb holder is secured by the side contact screw, which enters through a hole drilled in the side of the lamp. Sheet

## A Selection of our Readers' Home-made Gadgets, with some Practical Hints on Work in the Garage.

tin is used to make the clip; the lamp is secured in this by one screw and nut, then the strip passes round the speedometer body and is clamped by a second nut and bolt.

For the location of the switch a position beneath the handle-bar was deemed best, and the construction was as follows: A round piece of wood was bored out to form a cylindrical shell, with a hole drilled through the blind end; in this hole a wooden plunger button is a loose fit. An L-shaped piece of springy brass strip is secured inside, touching the push button, and above it is a rigid brass elbow. These brass pieces form the contacts, and a wire is led to each, the whole being fastened to the bar with a tin clip. One wire goes to the battery, one direct to the

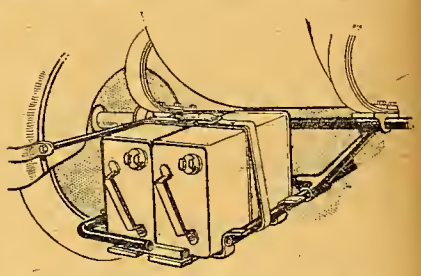


A useful idea for night riding.

lamp; the other contact screw on the lamp is wired to the other battery terminal. A 2.5 volt bulb is used and a pocket lamp accumulator of the same voltage is carried in one of the tool bags. Dry batteries could, of course, be used.

## Carrying Petrol Tins on a Millford Sidecar.

CERTAIN of the most popular models of Millford sidecar chassis are fitted with a luggage grid extension of the main tubes as an integral part of the construction, and on this it is quite easy to make a petrol tin carrier by very simple means. Mr. W. G. Harrison, of Coventry, explains his method thus:—"Two pieces of wood ¼in. thick, about 5in. wide, and a few inches longer than a petrol tin were obtained. These were secured together by two further pieces of wood fixed on top, one at each end, in such a manner as to permit a petrol tin just to enter between. Then two 1in. by ⅛in. steel strip brackets were bent so as to allow them to be pushed into place between the

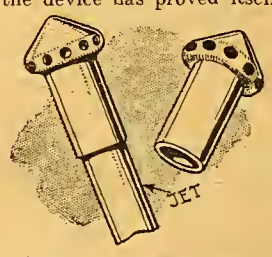


A tried petrol carrying device of particular interest to owners of Millford sidecars.

chassis tubes: for bending purposes the ends of the strips were heated in the fire. These brackets were placed in position with the wooden support on top. Two tins were placed side by side between the end pieces of wood, and the whole gear was secured together by leading a strap across the top of the tins, under the chassis tubes on each side, and the two ends finally secured on top as tightly as possible." This device, our reader assured us, has been in use for many hundreds of miles, and has never shown any signs of the tins shaking loose. It will be seen that as there are no fixtures to the chassis, the whole support can be readily removed when not in use.

## A Spraying Jet.

BEING of a mechanical turn, Mr. G. F. Rose, of Doncaster, constructed the little cap illustrated to fit over the single jet of his old-type B. and B. carburetter. Probably a petrol pipe union with the conical end "blanked" with a blob of solder would answer the purpose if a suitable fitting could not be turned out of brass. The radial holes are $\frac{1}{32}$in. diameter, and the efficacy of the device has proved itself to our correspondent's satisfaction, since he has been able to screw up his W.S.R. variable jet adapter half a turn with the diffuser in use without any diminution of power.



Converting a single jet into a spray.

# WHAT THE PRACTISING REVEALED.

## Speed Possibilities of Men and Machines in To-day's Senior T.T. Anybody's Race.

WHEN practising ended last Monday morning the Senior Tourist Trophy Race truly remained anybody's victory. Seldom indeed has the race been so open.
